CONCRETE PORCH FLOOR.

Editor Kansas Farmer—I want to put a concrete floor in a porch. Will you please give me some instructions with regard to the amount of each ingredient to use for the rough floor, and what to use for the finish. Please answer through your valuable paper.

Douglas County. J. SMITH.

The materials used in concrete construction are usually Portland cement, sand, and broken stone. To these steel rods have recently been added and have proven admirable in contributing to strength and durability. The great Melan arch bridge over the Kansas River at Topeka is a concrete steel structure. No limit is placed on the weight that may be placed upon it, and no sign cautions against fast driving. During the great flood a torrent raged around either end of this bridge, the street railway bridge just up stream went out and with great quantities of drift bumped against the Melan bridge, but it stood an island in the mad waters and was uninjured except by the washing away of approaches. In building the new State printing office, now nearing completion at Topeka, concrete columns one foot square, reinforced with steel rods, were erected on cast-iron footings. On top of these columns reinforced concrete beams and a reinforce concrete floor were constructed. On top of these another set of reinforced concrete columns, another set of reinforced concrete

beams and another reinforced concrete floor were constructed. These concrete floors were tested soon after completion by piling immense weights of bricks upon them. The whole has since been enclosed with brick walls, making a beautiful building which is practically fireproof.

The proportions in which materials for concrete are used vary greatly. In the State Printing Office the proportions are 1 measure of Iola Portland cement, $2\frac{1}{2}$ measures of river sand and 5 measures of broken stone.

Where the broken stone is not used it is doubtless allowable to increase the proportion of sand. Excellent results are obtained with 1 of cement to $3\frac{1}{2}$ of sand. One of cement to 4 or even 5 of clean sand may be used in some cases where great strength is not required.

If our correspondent had stated the size of the proposed floor and whether it is to be laid upon the ground or on piers, this answer might have been simplified. If the floor is to be laid upon the ground or upon a walled-in area filled with earth, tamp the earth so that it will never settle; make it level, or, if the floor is to slope, give the earth foundation the slope designed for the floor; make the top of the earth support four inches lower than the top of the proposed floor. Enclose a space next to the building by 2 by 4's placed on edge. Fill this space with well mixed concrete materials made wet enough to be readily tamped solid. If

no broken stone be used in the concrete, the mortar may be made thin enough to go readily to place, being merely pushed down around the edges with a trowel or paddle. It is perhaps better to finish the section before removing the 2 by 4's. For finishing, some use a mortar made of 1 part cement to 2 parts of screened sand. Others are satisfied with 1 to 3, while still others like 1 to 1. A facing half an inch thick made 1 to 2, troweled hard will be very satisfactory. After this first section of the floor has had time to "set" so as not to be disturbed by removal of the 2 by 4's, another section may be enclosed and made as above described for the first.

If the floor is to be at considerable height above the ground, or if for other cause it is desirable to build it upon "pillars," it will be necessary to construct a temporary support for the floor during construction. This must be made strong and rigid enough to bear the weight and tamping securely. If the porch is eight feet wide and the pillars are eight feet apart, the rear edge of the porch resting on the foundation wall, it will be well to provide a beam along the front edge. This may be 4 inches thick and say 4 or 6 inches deep. Beams may also be provided say, 4 feet apart, reaching across the porch from front to rear. It will be readily understood that provision is made for these beams by making corresponding channels in the temporary floor on

which the cement floor is to be made. Now provide steel rods, say, $\frac{3}{8}$ inch in diameter and of suitable lengths. Heat these at the ends and bend about 2 inches at right angles. When filling the moulds for the beams place two of these hooked rods at about 2 inches from the lower edge of each beam. When the floor is made, steel rods in the concrete are placed, say, 2 feet apart. The rods in the floor should cross the beams. To make a reasonably strong job, place the steel rods in the floor in such manner as to make squares 2 by 2 feet. After such a floor has been in place for a week the temporary support or mould may be removed. The edge of the floor may be given any desired form by providing a suitable mould. The top should be finished as previously described.

FREE ALCOHOL FOR INDUSTRIAL USES.

At its last meeting the National Grange unanimously adopted a resolution asking Congress to remove the internal revenue tax from alcohol that shall have been rendered unfit for beverage purposes. This request has been made by many bodies representing other industrial interests. Some of the reasons for the removal of the tax have been discussed in former issues of the Kansas Farmer. Now comes Congressman Calderhead, of Kansas, with a bill which he has introduced in the House of Representatives. It is as follows:

Champion Herd Percheron Horses, American Royal, Kansas City, 1905. Winner of the \$100 Silver Cup. Herd Headed by Casino 27830 (45462). Owned and Exhibited by J. W. and J. C. Robison, Towanda, Kans., Who Hold Their Great Annual Sale at Wichita, on Wednesday, February 21, 1906.

"A Bill to permit the industrial uses of alcohol and to enlarge the domestic market for farm products."

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

"That on and after the passage of this Act no internal revenue tax shall be levied or collected on ethyl alcohol of domestic production which has been rendered undrinkable or unfit for use as a beverage, prior to withdrawal from distillery bonded warehouse."

"Sec. 2.—The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe the necessary regulations to carry this Act into effect."

"Sec. 3.—That any person, or persons, who shall rectify or purify ethyl alcohol which has been removed from distillery warehouse free of tax, under the provisions of this Act, so as to remove or separate therefrom by any process whatever the substance, or substances, which have been added thereto for the purpose of rendering such ethyl alcohol undrinkable or unfit for use as a beverage, shall on conviction be subjected to a fine of not less than \$500 nor more than \$5,000, and be imprisoned not less than six months nor more than three years."

THE AMERICAN LIVE STOCK ASSOCIATION.

Denver, Colorado, which has grown to a generous maturity at the foot of the Rocky Mountains and which has heretofore been known more particularly for its mining and railroad interests, was last week the scene of events which were highly significant of a later and greater development than she has hitherto known. During the week beginning January 29, there occurred the largest gathering of representative men whose chief interest lay in live stock that has ever been seen in the Western country. On this occasion there was effected the consolidation of the National Live Stock Association with the American Stock-Growers' Association, which together have a membership of some twelve thousand energetic producers of live stock. There were also held the meetings of the National Wool-Growers' Association, the Colorado Horse-Growers' Association, the Colorado State Horticultural Association, the State Bee-Keepers' Association, The Colorado Farmers' Congress and the United Fruit-Growers' Association of Colorado. These filled the city with active, energetic men who represented all the leading live-stock States of the Union west of Ohio.

The chief interest centered in the effort to reunite the associations which for a year past have been known as the American Stock-Growers' Association and the National Live Stock Association, the latter of which was the parent association. This union was happily effected under the presidency of Murdo Mackenzie of Trinidad, Colorado, and under the name of the American National Live Stock Association.

This new association is characterized by the fact that it is composed entirely by producers of live stock and that commission houses, railroads and packing houses are not admitted to membership. F. J. Hagenbarth, president of the old National Association, was unanimously elected first vice-president of

the new association, and T. W. Tomlinson, of Chicago, was made secretary.

Mr. Gifford Pinchot, chief of the Forestry Department of the Government, was present as the personal representative of President Roosevelt, and gave assurance that the rights of the cattle men would be carefully looked after and the forestry reserves rigidly handled.

The Live Stock Association went on record in behalf of the Hepburn bill then pending, but since passed the lower House of Congress, and also heartily commended President Roosevelt for his untiring efforts in behalf of the people as against corporate greed. They also commended Secretary Wilson for the vast amount of good work done by his department for the benefit of agriculture and live-stock interests. Other resolutions commended the agricultural colleges of the country for the high quality of their work; endorsed the law giving the President power to make reciprocity treaties with foreign countries; and an extension of the 28-hour law to 26 hours for live stock on the cars.

An executive committee for the American National Live Stock Association was named as follows: J. V. Vickers, Tombstone, Ariz.; Walter Vail, Los Angeles, Cal.; E. M. Ammons, Littleton, Colo.; J. C. Johnson, Higbee, Colo.; H. C. Wallace, Des Moines, Iowa; A. L. Ames, Buckingham, Iowa; W. J. Todd, Maple Hill, Kans.; M. M. Sherman, Crawford, Kans.; Henry S. Boice, Kansas City, Mo.; Captain J. T. Brown, Birney, Mont.; David G. Browne, Fort Benton, Mont.; W. G. Comstock, Ellsworth, Neb.; Robert Taylor, Abbott, Neb.; C. M. O'Donnell, Bell Ranch, N. M.; Chas. Schleiter, Clayton, N. M.; I. M. Humphrey, Rapid City, S. D.; F. M. Stewart, Buffalo, Gap, S. D.; Richard Walsh, Paloduro, Texas; W. W. Turney, El Paso, Texas; Captain John T. Lytle, Fort Worth, Texas; M. K. Parsons, Salt Lake City, Utah; Ora Haley, Laramie, Wyo.; W. H. Jack, Silver City, N. M.; H. A. Jastro, Bakersfield, Cal.; A. E. DeRicqles, Denver, Colo.; E. S. Gosner, Arizona; Richard Scott, Milwaukee, Ore.

Thus reunited and strengthened this great association of live-stock interests faces the future with every prospect of attaining the rights which belong to it and for which it has so long contended. This is undoubtedly at present the most powerful organization of the kind in the world and its influence for good will be made manifest in the future and will be a thing with which the politicians will have to reckon.

THE TRI-COUNTY FARMERS' INSTITUTE.

The Wellsville meeting of the Tri-County Farmers' Institute was held February 8 and 9 in the opera house. E. S. Kirkpatrick presided. The proceedings opened with an invocation by Rev. George Hine. The address of welcome by Mayor W. H. Moherman was responded to by J. B. Dickson of Edgerton.

At the afternoon session "The Farm Orchard" by B. F. Smith, of Lawrence, brought out a lively discussion led by Henry Rhoades, of Gardner. In an address on "Health of Live Stock," Dr. F. S. Schoenleber, of the State Agricultural College, brought out many useful points. Diseases of the horse attracted most attention. The discussion was led by Dr. Elliott, of Miami County.

The evening session opened with a paper on preventive medicine by Dr. G. N. Jewett, of Edgerton. The second paper of the evening on "The Grange, Its Relation to the Farmer," by I. D. Hibner, of Olathe, was followed by the closest attention from the large audience.

Dr. Schoenleber followed with a highly appreciated address on "Ethical and Economic Phases of Pure-Bred Live Stock."

The first address on Friday morning was by E. C. Cowles, of Lawrence, on "The Cost of Dirt Roads." Copies of this most excellent address were desired for distribution. The editor of the Kansas Farmer stated that he would be glad to print Mr. Cowles' address in his paper and send copies to all whose names and addresses should be furnished by the secretary of the institute. "Modern Conveniences in the Farm Home" was the title of a paper by E. B. Cowgill, editor of the Kansas Farmer. In it were shown plans for installing in even a small farm home the modern improvements known as bath-room fixtures. The arrangement was illustrated by drawings. The five points, viz., place to put them, water supply, drainage, heat, and ventilation, were considered and the cost was shown to be not prohibitive.

The afternoon session was opened by the election of officers which resulted as follows: President, Henry Rhoades, Gardner; vice-president, J. F. Hastings,

Edgerton; secretary, E. Essex, Gardner. The subject of "Corn Breeding" was then taken up in an address by E. B. Cowgill. The numerous questions asked indicated the deep interest farmers are taking in this subject. The next address was by Mrs. T. L. Hogue, of Olathe, on "Shadows." With vivid word pictures she portrayed some of the shadows that may come over the lives of persons on account of wrong or inefficient attention in the home during youth. This address appealed strongly for a better citizenship, grounded on a better appreciation of responsibility to youth. It naturally verged into a lofty patriotism and ended with a series of magnificent apostrophies to the flag.

The evening session began with "Incidents and Observations of My Travels" by W. E. Kibbie, of Princeton, and was followed by a paper on "Agriculture in the Common Schools," by C. A. D. Jacobs, principal of the Wellsville schools. This paper was so well liked that request was made that it be published in the Kansas Farmer.

The program was interspersed with declamations and music; the weather was ideal; the attendance was large and enthusiastic from start to finish, many claiming this to be the most successful meeting in the history of the famous Tri-County Institute.

COUNTRY TELEPHONE CONTRACT.

Editor Kansas Farmer:—Will you kindly give a little information through the columns of your much valued paper?

There are a number of farmers in this vicinity who are building telephone lines. They buy their own phones and build their own lines. Some of the lines are owned by one farmer, with as many as 12 phones. They have been encouraged in this by a local telephone company who own a few lines in the country, a central station, and are agents for the Bell Company's toll lines at this place. Their offer is to give us the privilege of "Central" at 50 cents per month, or \$6 per year, payable semi-annually. After we are installed with Central, we are asked to sign a contract for three or more years at \$6—some as high as five years—just as they can persuade them to do, agreeing not to attach to another company except by written consent from them (the phone company). Some are refusing to sign for more than one year. There was nothing said about three years in the bargain, or talk, until after our wire was installed in Central. What are the merits of the contention? Please give any other information along the line of farmers' telephone building.

A SUBSCRIBER.

Harvey County.

If the writer were one of these owners, he would want to bind the central company by a contract as long as possible at the rates named. The danger is, that after you have your connections made on a contract, say, for 12 months, the central company may ask a much higher price on the expiration of the contract. The \$6 rate is very reasonable. The fact that you must agree that you will not join your lines to any other Central need not be an objection. Indeed, the assurance that there will be but one system is valuable. In Topeka we have two systems. To reach all telephone users we are obliged to install two phones. The cost of each is in no case less than \$18 per year. Every user would rather pay a higher price if the work could be confined to one system.

The Kansas Farmer's advice is to get the central company to contract for five or even ten years if it will.

FARMERS' INSTITUTE DATES.

Next week a short series of farmers' institutes will be held in the northeastern part of Kansas. Subjects of special emphasis by lecturers from the Kansas Agricultural College will be Corn Breeding and Orcharding. Following is the itinerary: Frankfort, Monday, February 19; Centralia, Tuesday, February 20; Oneida, Tuesday-Wednesday, February 20-21; Hiawatha, Thursday, February 22; Troy, Friday, February 23.

A subscriber inquires whether there is in Kansas a mutual insurance company for houses and barns. There is. The Alliance Mutual Insurance Company, of McPherson, Kans., has been doing a successful business for many years. The advertisement of this company will, hereafter, make such inquiry superfluous. Other mutuals will find it to their advantage to "hang out their signs" in the advertising columns of the Kansas Farmer.

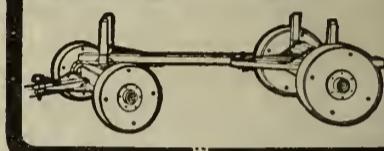

The Santa Fe has just issued a most attractive circular giving information about its California service. This can

Every farmer knows the labor-saving advantages of a low-down, wide-tire, short-turn, roomy wagon. The point he wants to decide is whose make will give him the most service. If he will investigate the Farmer's Handy Wagon that is made in Saginaw, his own good judgment will direct him to a wise purchase. We can't give detail descriptions of it here. We can't tell you all the reasons why it is better value for the money, why it lasts longer, carries bigger loads, requires less repairs, but all this and more is in our new 1906 wagon catalogue which we will send free on request. A postal brings it and it will pay you to send for it right now. It's full of practical wagon buying advice. Sold by all dealers.

WOOD OR STEEL WHEELS

be had for the asking. Those who contemplate a trip should address the Passenger Department, Santa Fe Route, Topeka.

Kansas Negro Farmers Organize.

At the home of J. G. Grove, the negro who has the name of the "Potato King of Kansas," a number of negro farmers met on February 8 and organized a society which will be known as the Sunflower State Agriculturists. The organization will include all of the negroes who are farmers in the State and the object will be to advance the interests of the negro farmers.

The officers elected were: C. A. Grove, of Edwardsville, president; Arthur Emery, of Lawrence, first vice president; Caspy Hultz, of Lawrence, second vice president; Ida May Grove, of Edwardsville, third vice president; T. E. Harvey, of Lawrence, secretary; Robert Keith, of Topeka, treasurer. The president is a graduate of the Kansas State Agricultural College.

More Light Wanted.

Editor Kansas Farmer:—You say, in answer to A. C. Jones, January 26: "There is nothing equal to a continuous concrete floor for a stable." Now, I would like to use concrete, but it is claimed by some that it is too cold for all kinds of stock, including mine. One writer says it is all right if the floor has a water-proof finish and proper slope. It is too expensive to put in such a floor and then find it detrimental; the drainage part is all right. I would like to hear from parties using them.

At the stock-breeders' meeting Mr. Sherman said, "Don't wait for it (alfalfa) to cure in the field, but just rake it with an ordinary rake and place it in the barn." He says, "I have tried it in a small mow and a large mow, and I never had a case where it mow-burned, as they call it." Now that reads easy, but we are afraid of that kind of work in this part (Republic County), on the first crop, at least. He is all right on the feeding qualities, etc.

I wish Mr. Sherman would inform us all if his hay is free from dust, what kind of barn he has, if air-tight, etc. If a safe and proper way of curing alfalfa can be found, then millions more will be added to its value in Kansas. More light on both subjects, please.

Republic County. W. M. MOORE.

The Right Road

from Kansas City to Chicago, St. Paul, Minneapolis, Dubuque and Des Moines is the Chicago Great Western Railway. Three well equipped trains daily. Best of service. For further information apply to Geo. W. Lincoln, T. P. A., 7 W. 9th St., Kansas City, Mo.

Agriculture**Oats on Corn-Stubble.**

There is a question I should be very glad to get your opinion upon, if it is not covered in the bulletins you send me. If it is answered in the Kansas Farmer I shall see it.

I plowed a piece of wheat-stubble last fall rather late for wheat, and as it kept pretty dry I did not sow it to wheat. Will that land be as good or better for oats this spring than stubble-land that was not plowed, or land that raised corn last year?

If the stubble-land is as good or better, shall I plow it or disk it, or both before seeding? A. H. RYAN.

Clay County.

It will depend somewhat upon the season and the fertility of the soil as to which piece of land will produce the best crop of oats next season. If the land is quite fertile and the season is sufficiently favorable for growth, the oats on the fall plowing will be more apt to lodge than the oats on spring-plowed wheat-stubble land, or on the corn-stubble land. As a rule, I would prefer the fall plowing or the corn-land rather than the unplowed wheat-stubble land for seeding to oats next spring. It is necessary to sow oats very early and if the land must be plowed in the spring the oats are not likely to be sown so early as will be possible to sow on fall plowing or on corn-stubble land. I would as a general rule recommend to disk and harrow the corn-stubble land in preparing the seed-bed for oats in preference to plowing, since by this method of preparation you may secure a more favorable seed-bed than by plowing, and also sow the oats earlier than you would be able to sow if you plowed the land.

From the standpoint of rotation of crops I would prefer to plant the corn after the wheat and the oats after the corn, and if the season is fairly favorable for the production of oats, I believe you will secure as large a yield on the corn-stubble land as on the fall-plowed wheat land.

A. M. TENNEYCK.

Sorghum Smut.

I would like to ask you a few questions about raising cane. I had about 11 acres this year on one side of the field that was just about one-half smut; what is the reason for this? That side is along a small ravine. It has been in cane for three years; this year it was smutted worse than last year and last year worse than the year before. The seed I had was the black, but mixed a little with the red, the field was becoming weedy, but was cleaned up later on and the weeds all cut out. What is the best time to plant cane? What is the best kind of cane to raise for seed and where can a man get the pure seed and at what price per bushel?

Clay County. D. W. LEWIS.

The grain smut of sorghum (*Cen-tractia Sorghi-Vulgaris*) is a fungus disease of the sorghum plant. You observe when you break the smutty grains that they are composed of a large number of dust-like cells or spores; these are really the seeds of the smut. When smutty sorghum is threshed, the smut-balls are broken and the dust-like spores are scattered throughout the threshed seed, some of them no doubt adhering to the sound grains. When such seed is planted in the soil these smut spores sprout with the grain and infect the germinating seed or young plantlet, the fungus or smut-plant growing within the sorghum plant and feeding upon its juices and tissues, and at fruiting time instead of the formation of the sorghum-seed the smut-balls are formed as the fruit of the fungus.

It is possible for clean seed to come in contact with smut spores in a smut-infested soil, but this is not likely to happen. Usually the infection comes from threshing smutty seed with clean seed, or it may result from putting clean seed in a bin which has contained smutty seed.

It is possible to treat sorghum seed and destroy the smut spores the same as with wheat, the formaldehyde treatment being quite successfully used. This treatment consists in thoroughly wetting the seed with a solution of 1 pound of 40 per cent formaldehyde in 30 to 40 gallons of water. The wetting may be done by dipping the seed for a few minutes or by sprinkling the grain spread thick on a floor and shoveling it over until it is thoroughly wet, when it should be allowed to lay

for several hours and then shoveled over again, allowing the grain to dry on the outside, when the seed may be planted.

A better method is to secure clean seed from a neighbor whose seed is not infected with smut, or the farmer may go into the field early in the fall as soon as the sorghum heads are ripe and select the sound heads from the most thrifty plants, keeping them from coming in contact with smutty heads or smutty seed. This is the proper way to select sorghum seed and Kafir-corn seed; if seed were selected in this way there would be little loss from smutty grain. It is possible, of course, to secure some smutty grains by selecting heads of sorghum and Kafir-corn from a crop which is infected with smut, but this is not likely to occur if the largest heads with strong plump seed are selected from strong, well developed plants.

The varieties which have succeeded well at this station are Coleman, Folger, Kansas Orange and Early Amber. The Cavanaugh is also a good producing cane but late in maturing. Of the varieties named the Coleman has given the largest yields of grain and is also one of the best fodder-producers. Kansas Orange is a very excellent fodder cane, while the Early Amber may be recommended on account of its early maturing and good feeding qualities.

For seed-production we usually plant cane about the first of June. For the production of hay or fodder the grain may be sown broadcast or planted in close drills as late as the middle of July and produce a good growth and quality of hay.

Western seed dealers sell seeds of the several varieties named in this letter. You can secure sorghum-seed from almost any western seed-dealer. Perhaps the best way to secure a pure-bred variety is to select the best heads in the field as described above.

A. M. TENNEYCK.

Japanese Clover.

Editor Kansas Farmer:—Seeing some questions in the "Old Reliable" Kansas Farmer some time ago in regard to Japanese clover, and having seen the same near Fort Smith and Van Buren, Arkansas. The past two summers, I thought perhaps I could interest some on that subject. Japanese clover in Arkansas is an annual; but wherever it grows it will come up quickly from seed the next spring. It matters not how closely it is pastured it will make abundant seed for a crop the next year. It grows everywhere through the timber, even where the shale is very heavy. Stock do well on it, but horses slobber very badly. I think it would succeed in a Kansas climate and soil.

It is slow to start in the spring and will not grow much until the weather becomes quite warm. I have seen it grow a foot high on rich bottom-land and very thick, but never saw it cut for hay. It is a legume and is a good enricher of the soil. G. W. LONG.

Morris County.

Seeding Questions.

I have 11 acres of good creek-bottom land that has been in blue-grass for two years. The stand was not very good late last summer, and I plowed it to plant winter wheat but it was dry at the time. The field was cloudy and rough and when it rained it was too late to plant wheat. Would you advise me to plant macaroni wheat in it this spring? If so, where can I secure the seed and what will it cost? Please give me your advice whether it is better to plant that kind of wheat or alfalfa.

W. N. THOMAS.

Coffey County.

The durum or macaroni wheat has proven to be one of the best-producing varieties of spring wheat at this station. I have sent you a circular in which you will find the rates and yields of the varieties tested at Manhattan, Fort Hays, and McPherson Experiment stations in Kansas. You will observe that at this station the durum wheat has not yielded nearly so well as the best-producing varieties of winter wheat.

If you wish to plant small grain on the land in question, I think barley or oats are a preferable crop to wheat. Corn usually succeeds better on now breaking than small grains and it would appear to me that your creek-bottom land ought to grow excellent corn; also the loose, mellow condition in which this land will be left next season will not allow the preparation of the most favorable seed-bed for planting small grains. The same objection may be urged against sowing alfalfa on this land next spring. A fairly

good seed-bed, however, may be prepared by thorough disk and harrowing in order to produce a finely pulverized, well-settled seed-bed. It would be my advice, that you grow corn or some other cultivated crop on the land next season, planting to small grains or alfalfa the succeeding year; however, it would be my preference to seed down old land or land which has been farmed to grain and corn crops for several years. Such old land would probably be more benefited by rotation with alfalfa than the sod-land which you have just broken up. If the grass-land is in a fair state of fertility, it ought to produce several crops of corn and small grains before it is necessary to again seed to grass or alfalfa.

A. M. TENNEYCK.

Red or Black-Hulled White Kafir-Corn?

We have been weighing the subject of Kafir-corn in planning our crops for the coming year. The question is, which has the better feeding-value, the red or the black-hulled white? We raise it chiefly for poultry. I have rather favored the white as it seemed the more productive, producing larger heads and somewhat larger seeds; however, I see it advocated by many in print that the red has the greater feeding-value; hence I write you for correct information. Answer through the Kansas Farmer if you choose.

MRS. F. A. HARGRAVE.

Franklin County.

The only data so far as I know on the relative feeding-value of the different varieties of Kafir-corn is that given in Bulletin 67 of the Kansas Station. In this bulletin the result of some experiments in feeding cattle on corn, red Kafir-corn and the black-hulled white Kafir-corn are given. The comparative value of the two kinds were determined by calculating all of the cost of the roughness fed to the steers, shipping, etc., and giving the Kafir-corn the credit for what remained of the price received. In the case of the red Kafir-corn, this amount was \$93.79 to pay for the 290 bushels of Kafir-corn eaten by the steers, giving a price of 32.3 cents per bushel for this variety. With the black-hulled white, \$90.83 remained to pay for the 290 bushels of the grain eaten, giving a value of 31.3 cents per bushel which is a cent less than the other lot paid for the red Kafir-corn. From this experiment it would appear that there is a slight difference in the feeding-value of the two varieties, the red having the advantage in this case.

In this same bulletin Professor Georgeson in speaking of the variety known as white Kafir-corn says that the grain of this variety is probably of a somewhat higher feeding-value than the grain of the black-hulled white. He gives no figures, however, to substantiate his belief.

G. C. WHEELER.

Prairie-Dog Poison.

Will you oblige me by publishing the formula devised and used by the Agricultural College expert to exterminate prairie-dogs? And if you know please say whether it will also destroy pocket-gophers. The gopher is a great pest here.

J. M. FOY.

Putnam County, Fla.

By the provisions of the contract with the patentee we are not permitted either to publish the formula of the prairie-dog and gopher poison in use at the Kansas Agricultural Experiment Station, or to supply the manufactured poison to persons other than residents of the State. Probably an application to David W. Staples, Crafts, Okla., will secure the information desired.

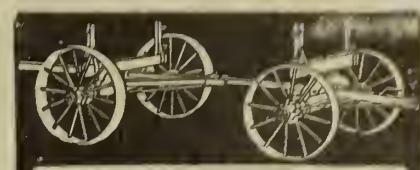

E. A. POPENOE.

Listing Ground in Winter.

Please give me information as to listing ground for corn during the months of January and February, letting the ground lay until corn-planting time and planting it without re-listing the ground. The land which I wish to use was in corn last season and is not very foul. I have been thinking of listing some as stated above and have been advised not to do so as it would cause the corn to come up poorly.

Sumner County. A SUBSCRIBER.

During the past three seasons we have carried on an experiment in preparing land in different ways for planting corn. This work was begun in 1903. Choosing a piece of corn-stubble land, the field was layed off into equal areas and the following treatment given: In the early part of March one plot was double-disked; another plot double-disked and harrowed, and a third plot was listed in furrows about 3½ feet apart, a fourth plot was plowed and

**WHAT DO YOU SAY?**

GARDEN TOOLS FOR EVERY PURPOSE

AMES PLOW CO., 42 MARKET ST., BOSTON, MASS.

harrowed after plowing, while the fifth plot was left as a check and received no treatment. This field was planted to corn with the lister early in May. In plot 3, which was listed in the spring, the ridges were split at planting time, then the corn was planted in the old listed furrows, as you propose in your letter.

In 1904 this experiment was repeated and again in 1905, while several additional treatments were introduced, viz., one plot was plowed deep and another shallow, while one plot was listed early and the corn planted in the furrows at planting time, while with the other listed plot the ridges were split as in previous experiments. The results of the trial for the several years are given in the following table.

Table showing comparative yields of corn on land, receiving various kinds of treatment prior to planting of crop.

Treatment of plot	1903		1904		1905		Av. for 3 yrs.	
	Grain bu.	Stover tons	Grain bu.	Stover tons	Grain bu.	Stover tons	Grain bu.	Stover tons
Double-disked and harrowed.	65.18	1.567	50.27	1.26	43.54	1.45	52.99	1.43
Double-disked.	68.61	1.814	55.12	1.50	35.43	1.29	53.05	1.53
Untreated.	64.14	1.789	51.38	1.44	38.17	2.25	51.23	1.83
Listed-ridges split at planting time.	74.28	1.55	52.37	1.43	38.34	1.67	55.00	1.55
Plowed medium deep and harrowed.	61.26	1.153	54.96	1.46	39.60	1.68	51.94	1.43
Plowed shallow and harrowed.	41.71	1.74
Listed-planted in old furrows.	43.31	1.30
All corn was planted with the lister each year.

As an average for the three seasons the method of listing early in the spring and splitting the ridges at planting time has given an increased yield of 4.77 bushels of corn per acre when compared with the land which received no treatment. The next highest yield was secured from the plots which were double-disked, and double-disked and harrowed, the average increase being 2.8 bushels per acre. Ground which was plowed early and listed at planting time gave only a slight increase of .7 bushels per acre as compared with land which received no treatment previous to planting.

The yields of stover were not in proportion to the yields of corn, the greatest yield of stover being secured from the land which was untreated, although the difference in the yields of stover, as an average for three years was very small. By comparing yields for each of the several years it will be observed that the plot which was listed early and the ridges split at planting time gave the greatest yield only in 1903. In 1904 the plot which was double-disked gave the greatest yield of any of the plots in the series, while the plowed land ranked second in yield. In 1905 the double-disked and harrowed plot produced the most corn per acre, while the plowed land ranked second. It appears, therefore, that with the different treatments the results may vary with different seasons. On the whole, however, the early cultivation with the disk or with the lister has given increased yields sufficient to pay for the extra labor. For the second trial in 1905, shallow plowing gave a slightly greater yield per acre 2.11 bushels as compared with the deep plowing, while the corn planted in the old listed furrows yielded about 5 bushels more per acre than the corn planted by splitting the ridges between the furrows made by the early listing.

It has been urged in favor of winter or early spring disking that the land warms up earlier in the spring, producing more favorable conditions for sprouting the corn in the bottom of the old lister furrow than is secured by splitting the ridges at planting time. Possibly also there is a tendency to accumulate soil-moisture in the bottom of the lister furrows, which together with the warmer soil favors a rapid germination and strong start of the corn. In connection with the experiment outlined above, soil-moisture samples have been taken from the different plots each spring and the results have been slightly in favor of the early listing treatment, although disking and early plowing have each conserved soil moisture as compared with the land which received no early cultivation. I think the plan of listing early in the spring and preparing land for corn a very good method, but whether it is best to plant in the old furrows or split the ridges at planting-time is a question. If heavy rains have not fallen and the land does not require cultivation or stirring, it may be advisable to plant in the old furrows, while under the reversed conditions, especially for late planting, it would be better to split the ridges with the lister when the corn is planted. In the

varieties which we have for sale, doubtless the Reed's Yellow Dent, Kansas Sunflower, or Legal Tender of the yellow dent varieties, will succeed well; and the Boone County White, Silver Mine and McCaulay's White Dent of the white dent varieties. Our supply of Silver Mine is nearly exhausted and we have only a small amount of Legal Tender. The McCaulay White Dent and Kansas Sunflower are medium late maturing and the Silver Mine and Legal Tender are medium early maturing.

John D. Ziller, of Hiawatha, Kans., in your county, is a corn-breeder and has several well-bred varieties. Mr. Ziller took first premiums on both yellow and white corn at the Kansas Corn Breeders' exhibit held at Manhattan January 22 to 24. The varieties were the Hiawatha Yellow Dent and the Farmers' Interest. He also took second prize on the Boone County White corn.

Although I would let you have two bushels of our corn, yet it may be that the corn grown in your locality will succeed better than seed from this station. We will have a great demand for our seed-corn and will not have enough to satisfy the demand. I believe in patronizing home industry and buying seed from local breeders if the seed is good.

For Spring Pasture.

Can you advise me as to the sowing of rye-grasses, especially Italian rye-grass? I want something that will grow quick for spring pasture. Tall oat-grass is also recommended for quick results. I have a low, rich, black loam field on which I would like to sow one or both of these grasses as I have no pasture and none I can rent handy for milch cows. Farmers' Bulletin No. 102 U. S. Department of Agriculture, recommends these grasses and states that they will make pasture in a few weeks after sowing. I have another field that I am going to sow with Bromus inermis. A. M. TENEYCK,

Chautauqua County.

For quick pasture I believe you would do better to sow some annual grass or grain. A combination of barley and oats will make spring and summer pasture and produce much more grazing than you will be able to secure from rye-grass or tall oat-grass. Both of the last-named grasses are perennials and although they start more rapidly than Bromus inermis and English blue-grass, yet we can not consider these grasses equal to the last-named grasses, either for pasture or meadow.

We have been growing the several grasses at this station for a number of years and find that the rye-grasses, both the Italian and perennial rye-grasses, are practically worthless as compared with English blue-grass and Bromus inermis. The tall oat-grass produces better than the rye-grasses and may be of value as a combination with other grasses for a meadow or pasture, but it would not be a good grass to sow alone since it does not produce a sod.

If you desire to sow the rye grasses or fall oat-grass, you should sow about 30 to 40 pounds of the rye-grasses and 20 to 30 pounds of the fall oat-grass seed per acre. When two or more varieties of grasses are seeded together it is usual to sow at a slightly increased

rate per acre, more than the actual aliquot part of the regular seeding would require.

If you use the barley and oats for early pasture, sow at the rate of about a bushel of barley and a bushel and a half of oats per acre. For late summer and fall pasture, you could, a little later in the season, sow cow-peas, sorghum or corn, or a combination of corn and cow-peas or sorghum and cow-peas. At this station we found that corn and cow-peas sown at the rate of 3 or 4 pecks of cow-peas and $\frac{1}{2}$ bushel of corn per acre gave a large amount of excellent pasture for cattle in the late summer and fall. Of course to make the most out of annual pastures it is well to have different fields in order that you may turn the cattle from one field to another, allowing them to clean up one field before they are turned into the new pasture. When stock are turned into a large field of corn and cow-peas or sowed corn and sorghum they will destroy a considerable part of the forage by trampling it down.

In order to have a perennial pasture for next season you could sow a combination of English blue-grass and orchard-grass with a little clover, sowing 10 pounds each of the orchard-grass and English blue-grass with 5 or 6 pounds of Bromus inermis and 2 or 3 pounds of clover per acre. If you succeed in getting a good start this spring, the new seeding will furnish considerable pasture next fall. Care should be taken, however, not to pasture too closely as the young grasses may be easily injured by too close grazing or too early pasturing the first season after sowing.

It is likely that the Bromus inermis sown alone will make a good pasture, but I would recommend at least to include a little clover with it, and in your part of the State it is better to sow a considerable proportion of orchard-grass and English blue-grass. The last-named grasses may produce a quicker growth and more pasture the first year or two, but the Bromus inermis will gradually thicken up, while the other grasses may die out and become less productive. A combination of grasses with clover makes a more permanent and more productive pasture than any single grass.

I have mailed to you copies of press bulletins Nos. 125 and 129, giving information regarding the seeding of these grasses, and refer you to seedsmen whose advertisements appear in this paper.

A. M. TENEYCK.

Alfalfa Bacteria.

As spring approaches, thoughts of "alfalfa sowing" are naturally suggested. I read all I find in two agricultural papers—in fact everything that falls into my hands on the subject.

One writer says: "It is not a fertilizer," yet in the same article says, "If the soil is properly impregnated with the alfalfa bacteria so that nodules appear upon the roots of the plants, the alfalfa will certainly improve the soil by imparting nitrogen, gathered from the air." Adding nitrogen to the soil is certainly adding fertility.

We are advised to procure soil from fields where alfalfa has been grown and scatter the soil in the field where we propose to sow alfalfa. There is need of care in this; soil taken indiscriminately from fields may be as destitute of bacteria as the field you desire to sow. The fact that alfalfa has been grown in a field does not necessarily prove the presence of bacteria.

I conclude that if I scatter soil about my field the ferment will spread over the entire field—"A little leaven will leaven the whole lump." Am I correct? It is a good deal of an undertaking to ship or haul in from any distance soil enough to cover, even sparingly, a five- or ten-acre field. But if I am correct in the above, it relieves the situation amazingly.

I have seen it stated that bur clover carries with it the property of introducing the proper bacteria in the soil, and if sown with alfalfa it will produce the desired result. Why not adopt this plan and in this way escape these grafters in soil and nitro-culture done up in cotton? I have no doubt but this latter, in the hands of Dr. Moore of the U. S. Department of Agriculture, is legitimate and fairly safe; but he is not the only one selling nitro-culture preparations. You are aware that the U. S. Department of Agriculture has stated that nitro-culture treatments may not always prove successful.

If I am correct—"A little leaven will leaven the whole lump," a small percentage of bur clover added to the alfalfa seed, say $\frac{1}{4}$ bur clover, would be all that is needed. R. W. SCOTT.

Geary County.

I have not heard of any farmer who

The Farmer's Wife

And the Telephone

When considering the advantages of a telephone on the farm, and whether or not to buy one, don't forget the wife. Of course the telephone is a "time-saver" for the farmer, it removes the necessity for so many trips to town, and gives him more time for work, but above all don't overlook the companionship it will afford the wife during the long day when the men-folks are away. It will be a protector to her and a messenger if occasion compels her to call for aid or assistance in a hurry. It will relieve the dry monotony of many a dreary day and drive lonesomeness away. The story is told of a line inspector, out in Illinois, who one day found a woman rocking and knitting, with the receiver of her telephone tied onto her head, so that she might hear all the conversation that passed over the line. That poor woman was not "nippy," she was just lonesome. Hundreds of farmers' wives know what it means to be lonesome—to yearn for companionship. Think what a relief the telephone will be to your wife, what a sense of security it will give her just to feel that she has the entire neighborhood right at her elbow when she wants them.

Stromberg-Carlson Telephones

are best for the farm, because they are always in order. They are made right, especially for such service, and they stay right. You can buy cheaper telephones, but they will cost you more in the end. They will be out of fix most of the time and will require constant attention to keep them "working" at all. To make your farm line both practical and profitable, don't experiment with cheap telephones. Buy only the best. We would like to help you to decide which is best; to do that, let us send you our new book, "How the Telephone Helps the Farmer," in which we illustrate and describe the process of making a farm telephone from beginning to finish, taking up particularly the most important or essential parts and showing how we make them and how the cheap fellows make theirs. This will be an object lesson to you that may save you a good many dollars and no little disappointment. It tells how to interest your neighbors in building a line, and will furnish valuable information you cannot afford to be without. It's free—write for it today. A postal will do; just say, "Send me 12-N," and it will come by return mail.

The Campbell System Farming Association,
1715 California St. Denver, Colorado

has become wealthy by selling soil infected with bacteria, from old alfalfa fields. The college has offered to supply limited quantities of soil at a little more than cost of handling the soil. We found it necessary to charge for the soil, otherwise the demand would be greater than we could supply. It is not necessary to make a great outlay in introducing bacteria into new land by means of spreading the infected soil from old alfalfa fields. My recommendation is that only an acre or so of the new land be treated the first season. This will not require more than 300 or 400 pounds of soil, if the soil is finely pulverized and evenly distributed, which may be done by sowing broadcast by hand. A year or so after this inoculation, some of the surface soil from the acre in question may be used to spread over the balance of the field. In this way for a few dollars a farmer in almost any part of Kansas may inoculate the soil of a large area of land with the alfalfa bacteria.

It may be true that land where alfalfa is growing may not always contain a supply of the bacteria which are associated with the growing of this crop. It is usually a fact, however, that where alfalfa has grown successfully for any length of time—three or four years—the bacteria are almost surely present. If they were not the crop would not continue to thrive for that length of time, unless by heavy manuring or special fertilization. However, the presence of the bacteria may be readily shown by examining the roots of the alfalfa plants. On the small fibrous roots near the surface, small warts or tubercles will be found if the bacteria are present. It is true, as you have said that "a little leaven will leaven the whole lump" and a very small supply of bacteria spread over new land will in a year or so inoculate the roots of a large portion of the alfalfa plants growing on the field.

As to the use of nitro-culture preparations in treating the seed, the results are very variable. With the live culture and by faithfully following directions a careful farmer may infect the seed and thus inoculate the soil with the required bacteria, but failure of this method is more apt to result than by the use of the infected soil. Also, I would not recommend to inoculate seed for a large area but only for an acre or two, when in a year or so the balance of the area could be inoculated by using some of the infected soil from the land on which the inoculated seed was sown.

It may be true that the bacteria which live on the roots of bur clover may also work on the roots of alfalfa plants, but I do not understand why the inoculation of the soil should result sooner by sowing bur clover than by sowing alfalfa, provided the seed which is sown has not been treated nitro-culture preparations. I think your plan of sowing bur clover seed with the alfalfa would have little effect in introducing the alfalfa bacteria into new land. It seems, however, that it would not always be necessary to mix bur clover seed with alfalfa. The complaint has come from several farmers that the alfalfa seed which they purchased was adulterated with bur clover seed, and if this is very general it will not be necessary, as you see, to add more bur clover seed. Perhaps the seedsmen have your ideas on this subject and feel that they are only benefiting the farmer by adulterating the alfalfa with the bur clover seed.

A. M. TENEYCK.

Alfalfa in Drill-Rows.

My place is in the central western part of Wichita County, Kansas. I have about 200 acres of creek bottom on the Beaver, that varies from 12 to 14 feet to water, which I wish to put into alfalfa eventually. The main things to contend with are prairie-dogs, gophers, and salt-grass, also dry seasons; there are several fields here of one-quarter and one-half stands. As the seed is expensive, I wish your opinion on the following plan as a source for seed-production: After disposing of the foes, prepare a good seed-bed and plant in rows, then cultivate shallow 3 or more times per season and preserve dust mulch with harrow; then, when ready—say three or five years—drill in space between rows after the bacteria are present and make a solid tract. My idea would be to have the rows about 3 feet apart and use a Towers knife-cultivator (I have one) such as is used for corn in Illinois. This gives a level cultivation and a perfect mulch. My reason for thinking of such an experiment was this: I purchased the place and found it very foul with weeds. It occurred to me that this method would secure perfect inoculation of soil with bacteria (which are present in small numbers) and irradi-

ate any and all weeds and salt-grass, thus practically insuring a perfect stand when ready to seed solid, or fill in, also would be a seed-supply for the whole tract. I thought of trying a plot 10 or 12 acres to start with. I have had previous experience with alfalfa and believe there is no question about its success here. Having no information of such an experiment having been made, I should like your opinion very much, also any kindness in way of advice or suggestions relative to the matter.

C. S. CHRISTOPHER.
Wichita County.

The factors with which you have to contend are "strenuous," but if you can get rid of the prairie-dogs and gophers I think you may successfully contend with salt-grass and dry seasons. Your method of planting alfalfa in rows is a new one for this State, although I have heard it spoken of before. There is no doubt but that by planting alfalfa in rows and cultivating it you will give the alfalfa plants a much more favorable condition for starting and making a strong root-growth than will usually be the case by seeding broadcast or in close drills, as is the usual practice. It is likely that in your section of the State, alfalfa planted in rows 2 to 3 feet apart and cultivated will yield more per acre than if sown broadcast or in close drills and given little or no cultivation. The cultivation will conserve the soil-moisture and produce a larger growth from the land than would otherwise be the case. As to securing the inoculation of the soil with the alfalfa bacteria, I think this can readily be accomplished by the broadcasting or close drilling method of seeding, simply by carefully spreading over the new land infected soil secured from some old alfalfa field. Two hundred or 300 pounds of infected soil, finely pulverized and evenly distributed, will usually result in a good inoculation in a year or two.

When you wish to seed down the whole land, you may find it difficult to secure a stand of alfalfa between the cultivated rows after the alfalfa in the rows has become well established, since the plants will likely sap the ground of moisture and perhaps shade the land so much as to destroy the young alfalfa plants which may start; however the results can only be ascertained by making a test. Perhaps you will not desire to seed down the whole land after you have tested the cultivation method.

I hope you will undertake this experiment and shall be pleased if you will report results.

A. M. TENEYCK.

Yellow Alfalfa—Seed-Corn.

I own a farm in Kansas near Courtland, Republic County, which I bought eighteen months ago. I have had it rented till now, but intend to make my home on it from now on. It is a good quarter section, but like most land around there has been "corned" to death for twenty-five years. I have seen some of your articles and would like to be on your mailing list when I get home. The reason I write now is to ask a favor of you. Would you kindly give me the address of some reliable man who has a few bushels of soybeans for sale? I want the beans for seed. I am going to try the crop on about five acres this spring. I intend to sow broadcast and cut for fodder shortly after the plants start to form the first pods. Is that a good way? I am not so particular to get the fodder as to enrich the soil, as I have lots of alfalfa. Please tell me what you think best.

I had my renter put in an additional 10 acres of alfalfa this last spring, in May. The soil was fall-plowed, and he harrowed it and then seeded it, then harrowed it again. It came up in splendid shape, and grew well until it had four leaves, then stopped. We had much rain last summer but the alfalfa turned yellow and just stood that way, not growing any more except a few patches here and there. I took a trip home about August and examined the ground and found that it had been fall-plowed when the weeds were very high, and they formed a regular "mulch" 4 or 5 inches below the surface. When the alfalfa roots reached the mulch they either got heated or for some other cause did not penetrate to the subsoil. I have only a very poor stand here. Would it not be all right to sow seed this spring and disk it? I would like to have that particular field in alfalfa for a while. Have you any good seed-corn for sale? I would like to get some from you. Do you know any one that has large, white, seed-corn for sale?

Correct Fence Construction

CORRECT construction is just as important in fence as it is in a house, a bridge, or a wagon. With faulty construction, the best and the heaviest materials avail you nothing. Advance Fence is so constructed as to utilize *all* the strength of the material used. The stay wire is continuous, without an end for many rods. Manufacturers who use cut stays waste about half the strength of the wire. That's bad construction.

Galvanizing. We have recently made special arrangements with a large manufacturer of wire to have our representative always on the ground to see to the proper galvanizing of our wire and to reject all wire not properly galvanized. This insures the long life of Advance Fence.

We sell direct from factory and thereby cut out all unnecessary handling and profits of go-betweens. This makes quite a saving.

Thirty Days Free Trial. Place your order with us for what fence you need. After thirty days, if it does not suit you, return it to us at our expense and get your money back. That's fair.

We Prepay Freight and guarantee safe delivery.

Write today for our Free Fence Book and wholesale delivered prices

ADVANCE FENCE CO.

ADVANCE

Let Me Quote You a Price on a First-Class Fanning Mill

How many dollars could you save if you owned a genuine Chatham Fanning Mill?

Think for a moment what it will do.

It will grade grain so you can get a fancy price for the best.

It will take weed seed, chaff and withered kernels out of seed grain.

It will separate one kind of grain from another.

It will remove oats from wheat.

It will clean Corn, Rye, Barley, Wheat, Oats, Timothy, Clover, Millet, Flax, Rice, Peas, Beans, Kafir Corn, Potatoes, Broon Corn, Alfalfa, Grass Seed, Cotton Seed, Atsike, Blue Grass, Red Top, Buckwheat, Itungarlin, Orchard Grass, Rape, Rye Grass and everything of this kind.

And in any one of these processes a Chatham Fanning Mill will save its entire cost in short order.

For the fanning minkes every bushel of grain you raise worth more money.

You don't sow weeds if you use a Chatham Fanning Mill.

You don't get "second price" for grain if it has been lanned.

And to prove our claims to you—to convince you that Chatham Fanning Mills are the best made and will do what we say, we are willing to let you try one 30 days **FREE**.

If you wish,

Send today for our liberal proposition. It will surprise and please you.

For we sell direct to you and ship from one of our 20 big branch warehouses in leading cities. This means prompt shipments and quick deliveries.

And you get a Fanning Mill made by a factory that makes a specialty of high-grade mills.

You buy at a bargain price.

For we make our own mills in one of the biggest factories in the world.

Our ample capital enables us to buy supplies in immense quantities at low prices.

We turn out hundreds of Fanning Mills.

Our workmen are skilled. They have had long experience. They know just what to use and how to use it.

Consequently we are able to give you bigger value for your money than you can get anywhere else.

The Chatham

Name Stands for Quality.

And you can get no such Fanning Mills as ours from ordinary mail order or catalog houses.

You cannot buy mills as good from dealers or at general stores.

Over 200,000 Chatham Mills are in use. We have made them for sixty years. Today they are better than ever—absolutely modern and up-to-date.

Users everywhere will tell you our mills are the best.

But send at once for the rest of the story and our liberal selling terms.

Ask for our little book "How to Make Dollars Out of Wind." It tells how a Chatham Fanning Mill will put dollars in your pocket.

A post-card with your name and address, mailed today, gets it.

Stock Interests**PURE-BRED STOCK SALES.**

Dates claimed only for sales which are advertised or are to be advertised in this paper.

February 15-17, 1906—Third Annual Sale of the Improved Stock Breeders Association of the Wheat Belt at Caldwell, Kans., Chas. M. Johnston, Sec'y.

Feb. 19, 1906—Poland-China bred sows, at Ottawa, Kans., W. N. Messick & Son, Piedmont, Kans.

Feb. 20, 1906—M. S. Babcock, Nortonville, Kans., Poland-Chinas.

February 21-23, 1906—Percherons, Shorthorns, Herefords at Wichita, Kans., J. C. Robison, Manager, Townska, Kans.

Feb. 22, 1906—Shorthorns, by Plainville Shorthorn Breeders' Association, N. F. Shaw, Plainville, Kans.

Feb. 22, 1906—Poland-China bred sows, Boilin & Aaron, Leavenworth, Kans.

March 20-21-22, 1906—Combination sale of Shorthorns, R. A. Ford, Manager, Lawson, Mo.

Feb. 23-24, 1906—Manhattan, Kans., Percherons, Henry & Son of Wakefield, Kans.

Feb. 24, 1906—Poland-China bred sows, H. E. Lunt, Manager.

Feb. 24, 1906—Poland-Chinas, at Wichita, Kans.

February 28, 1906—Duroc-Jerseys by J. F. Staadt, Ottawa, Kans.

February 28 and March 1, 1906—C. A. Tannard, Gudger & Simpson, Kansas City, Mo. Herffords.

March 13, 1906—40 Poland-Chinas, by D. W. and 45 Shorthorns, C. S. Nevius, Chiles, Ia.

March 13, 1906—Shorthorns and Poland-Chinas by C. S. Nevius, Chiles, Kans.

March 20-22, 1906—Combination sales of Shorthorns, Herefords, Aberdeen-Angus and Herefords at Kansas City, R. A. Ford, Manager, Lawson, Mo.

April 3, 1906—James Stock Farm, Willard, Kans., trotting bred horses.

April 13, 1906—Shorthorns by the Southeastern Breeders' Association at Fredonia, Kans., H. E. Bachelder, Manager.

May 16, 1906—Geo. Allen, Omaha, Neb., Shorthorns.

KANSAS IMPROVED STOCK-BREEDERS' ASSOCIATION SIXTEENTH ANNUAL MEETING.

(Concluded.)

The Modern Hog.**DISCUSSION.**

Mr. McGuire: I rise to endorse the paper. I think it has covered every point possible in the hog line. Of course, he has left out the Tamworth, which possibly you alluded to. The Tamworths have their places among other hogs. They are called the "bacon" hog, and I suppose they are all right. But one great point with the hog is the first two months. If I can get a hog through successfully for the first two months then I have no fear after that; I can always make a good growth. For the first ten days I always feed my sows very carefully as this is the most delicate point. After the first ten days I can feed my sows all I want to of almost anything I can feed them.

A Member: I feel that Mr. Berry's paper has been a lesson to all of us, even though we consider that we are pretty near perfection in the way of raising pigs. I heartily endorse the paper so far as I understand it.

A Member: I do not believe breeders are in the habit of getting their feet in the trough very often, but I want to commend this paper as in my judgment being a good one. The ultimate end of the hog is the block, and the question is, how cheap, what is the most profitable time to get him there, and in what condition? He speaks of putting pigs off at 6 and 7 months weighing 250 pounds. Of course, a breeder has to feed different from what a man does that is feeding for the block. That is to be taken into consideration.

Mr. Berry: There are breeders here who are older than I, who have had more experience than I, but my observation leads me to believe that feeding has much to do with the maturing of the hog with type and quality as breeding. A man can feed for bone and muscle as well as breed for it. We hear a good deal in the discussion these days about heavy-boned hog or light-boned and which breed. I believe that feeding had more to do with development of the bone and ability of the hog to stand up than breeding. The fact is that the muscles and tendons have as much to do with holding the animal up as bone does. The quality of the bone has as much to do with it as the size of the bone. . . . Experiment stations have made feeding tests, and I think that those experiments agree on the fact as stated in the paper, that young animals gain more in proportion to the number of pounds of feed consumed than do older animals, and in the first part of the feeding test they gained faster than in the latter part. The type of animal and its advantage have as much to do with this, I might say, as do other conditions. The best gains I have ever secured in pigs or hogs were between the ages of 5 to 10 months. If they are well handled and well fed, after that they do not gain so rapidly in proportion to the amount of food consumed. I want to say one thing regarding alfalfa. There seems to be an impression gone out

and believed by a great many hog men that they can raise pigs on alfalfa and do very well. I do not believe that a breeder can get best results by feeding his brood sows alfalfa alone. To be sure they will get along until time of farrowing in good health and farrow apparently a good litter of pigs, but I have secured better results by having my sows in better flesh at farrowing time, as you have that much in reserve for feeding the pigs later.

Mr. Harrington: I do not want Mr. Maguire to tell on Gov. Hoard, because he is from Wisconsin. I think if you will look up Gov. Hoard's papers you will see that he fed them on alfalfa and drink, that drink consisting simply of skim milk, that is all.

Mr. Potter: I never yet saw a hog thrive on alfalfa alone, and I have seen alfalfa hogs by the thousands. They remind me of the average vegetarian. You know how he looks. Now, I understand Governor Glick has a hog talk. We will hear more about it when he tells us about it.

Governor Glick: If a man succeeds in anything after study and investigation it ought to be worth something. I commenced in '68 feeding hogs; not only thoroughbred hogs to sell to breeders, but stock hogs. I have raised an average of from 300 to 400 hogs a year, and I have some good ones. Bought a couple of sows from Queen Victoria, and three sows and a boar from Russell Swanwick's herd, and several good ones in Canada. I found I had a great deal of trouble wasting feed. In having all the hogs together some would be stronger than others, and they would commence at one end of a long trough and go the whole length, thinking they could get more feed, and the result was that small hogs did not gain as fast as they ought to. They were deprived of their full share of feed. I tried all kinds of troughs, got advice and assistance from gentlemen in relation to troughs, and the general consensus of opinion was that the "V" shaped trough was about the only successful trough that a farmer could have and use. From the waste of feed and the manner in which the hogs acted I came to the conclusion that that was not the right kind of a trough, and after studying and investigating, I thought out a pig-trough like this (holding up a small model). A 14-foot trough will feed 48 pigs. You can not get a 28-foot "V" trough in which you can feed slop to 48 pigs satisfactorily. This trough gives each pig its place. He can not get his feet into the trough; he doesn't waste any of his feed. The big hogs can not root the little pigs away from the trough. Each gets its full share as long as there is any feed in the trough. You save a large amount of feed by the use of that kind of trough and your pigs will do a great deal better. They will grow more uniform because they get their equal and full share of feed. This trough, you will see, has a center in it. The pig gets in here; he can not get his feet in the trough. He just stands there and eats his share of the slop, and he gets his share and all he wants if it is furnished him. I finally made two troughs of that kind, one 14 feet and one 16 feet long. Another advantage of this trough I found was this: Your having two troughs, the small pigs within a day or two would learn just where they could go and get their feed in peace without being rooted away. The other hogs that could not use this small place would immediately run to the other trough. I found that my pigs were a great deal more uniform in their growth, there was no waste of feed, and for that reason I do not believe it took nearly as much feed to make the pigs. Now that trough is not expensive. The bottom board 1 inch and 5 inches wide, sides beveled up and ordinary 6-inch fencing board used for the sides and upright pieces. Those two troughs lasted me nearly twenty years. I never had to rebuild them after I found just how I wanted them made.

A Member: How did you clean it out?

Governor Glick: It never gets dirty; the pigs keep their feet out. You can run it till spring without getting any dirt in it that you think it necessary to clean out, but you can clean it out.

It was stated by some that they had seen similar devices advertised, for which a handsome royalty was charged. The Governor said that he had used this for 30 years, and that some men may have undertaken to get a patent on it.

A Member: I would like to have the dimensions published in the Kansas Farmer.

A Member: Isn't a 6-inch board high for a pig to drink over?

Governor Glick: I never found any trouble from that.

A Member: I make a trough similar to that. I don't know how the Governor makes them last twenty years. The hogs gnaw the boards.

A Member: If I was going to make any improvement on that trough I would like the bottom part 6 inches wide and the top 12 inches, so you would have bevel on each side.

Professor Kinzer: I had not expected to say anything on this subject until a few minutes ago I was asked to make a few remarks on the subject of hogs. We are feeding a bunch of hogs at the station now in an experiment, in which one lot is being fed on corn alone—corn-chop, fed in the form of swill; another lot on corn and alfalfa, and the alfalfa is fed whole. We make a little rack to feed this in, the same way we feed calves; and the other lot is fed on corn and tankage. The idea in this experiment is to compare tankage with other feeds. Perhaps we have no feed to-day that is more talked of than tankage and meat meal, and a great many stations have reported large gains from the use of tankage in comparison with corn as a hog feed, and we have been able in this experiment to make almost twice the amount of pounds gain with tankage as compared with corn alone. Of course it is of great interest to the packers to have this product fed, as it was formerly waste, and if it can be turned into valuable feed it will mean dollars to them. I want to endorse what Mr. Berry stated in his paper about feeding hogs. I think one fault a great many find is in having their sows too fat at farrowing time. The trouble is in not having the right kind of fat on them. If they are fed altogether on corn there is danger of getting too fat; give them some other kind of feed and lots of range and exercise. We try to keep plenty of green feed for our pigs during summer. Being pressed for room on the farm we find rape to be about as satisfactory as anything.

A Member: Let me ask a question. Is it possible for a hog that has good body and that is thriving and apparently in good healthy condition to be affected by tuberculosis?

Professor Kinzer: Yes, sir; I think so; find it all through the body. Usually the lungs affected more or less. That is where they look for it.

A Member: Have you ever known a hog that would eat rape if he got a chance to eat grass?

Professor Kinzer: I would rather have grass or alfalfa if we can get it. I should prefer alfalfa or blue-grass and clover if you can get it.

A Member: Since we have been using alfalfa for pasture for pigs we have been troubled more with worms than ever before.

Professor Kinzer: I have never heard it attributed to that. Perhaps Mr. Berry can answer that.

Mr. Kirkpatrick: I would like to ask the professor for indications of tuberculosis in the hog; how would you know without veterinary inspection or killing?

Professor Kinzer: I do not believe you can tell it with outward examination. I do not think you could be certain of it.

A Member: Do hogs pretty nearly always cough on account of having worms?

Professor Kinzer: I think they do.

A Member: I would like to ask, if this tankage is made according to the process they claim, if it is possible for it to have tuberculosis in germs?

Professor Kinzer: I do not think it is possible to have any tuberculosis in it. It is heated to a high temperature. I do not think it is possible to have it come that way.

A Member: I have had a little experience in feeding tankage and I find it obviates the difficulty which some speak of here regarding worms. Whenever your hogs become constipated they are liable to become wormy. Whenever you find the droppings hard and black then is the time to commence feeding tankage. You will notice results at once. It keeps their bowels open, and as long as hogs' bowels are open and in good healthy condition they are not liable to contract disease.

A Member: I would like to ask one question, and before asking it would like to say that seven years ago I lost a lot of hogs by cholera. I now make a practice of feeding my hogs with salt the same as cows and horses, and I have not lost any. I want to ask you

SLOAN'S LINIMENT
CURES 50c. and \$1.00.
Swine Disease and Hog Cholera
Send for Circular with Directions.
Dr. EARL S. SLOAN, 615 Albany St., Boston, Mass.

THE HAPPY HOG AT DIPPING TIME
Is happy because he is being FREED from LICE that torture and torment. August, September October, are best months to dip hogs to kill lice. DIPOLENE, the best Hog Dip, works quickly and thoroughly. It KILLS HOG LICE, destroys all disease germs, prevents your hogs healthy and growing. Every hog-raiser needs it. DIPOLENE is easy to use; the cheapest hog insurance you can buy. Write for booklet and enough dip to make a gallon, FREE.

THE KANSAS FARMER

if you had any experience feeding hogs salt.

Professor Kinzer: We aim to keep salt before our hogs all the time, and when we can get wood-ashes we keep ashes and sulphur in little boxes in the pens.

A Member: We have a feeder with men who picks up culls around the country, and then he straightens them out with lime, carbolic acid and salt, which is in the pen all the time, especially the salt, sulphur and charcoal. But inside of a few weeks he has those hogs coming along fine. It is not an exception with him. It is right along. When a man has got a lot of hogs that are not doing well he buys them up. He is not afraid of hog cholera.

Mr. Hazelton: I was introduced and made a brief talk; I did not expect to say anything to you this afternoon. I came here more to hear what you gentlemen had to say in regard to the hog than to talk. I am naturally very much interested in the Kansas hog, as I am in Kansas horses and Kansas cattle. We have at Kansas City what we believe to be one of the greatest live-stock shows in the country, and Kansas cattle-breeders and Kansas horse-breeders have done perhaps more than those of any other state to make this a great live-stock show. I am met frequently with the question: Why do you not have the great American hog represented in the live-stock show? Well, I have been forced to say that the reason we have not had a good swine show at Kansas City is because the swine-breeders themselves have not shown sufficient interest in the matter. There are various reasons for this, and we feel that to have a thoroughly rounded, symmetrical, live-stock show it would be necessary to have the different breeds of swine which are now found all over the country. Last year some of the swine-breeders insisted on showing, and we gave them space, and they came there and showed their hogs. The directors of the American Royal Live Stock show have issued an invitation to the swine-breeders to come into the show this year, because they feel that it is a lopsided institution, great as it is, without the hog in it.

So far there has nothing tangible been done in regard to the horse-show outside of talking by a number of breeders in Iowa, Illinois and Missouri, and some from Kansas have talked the matter up, and some of the breeders' association have, and I am satisfied within the next two or three months definite action will be taken looking toward a swine show in Kansas City in October. Now, I do not know that there is anything that this body could do as a body further than to encourage us along the line of having a hog show there. As you know, the Kansas hog is a very important factor in the live-stock industry of Kansas City. I was reminded this afternoon, in speaking of the matter, that something over 50 per cent of the hogs which we receive at Kansas City are from the State of Kansas. There has been some objection raised to showing hogs at Kansas City on the ground that it is dangerous. Now, I appreciate the fact that it is dangerous to take show-hogs anywhere off the farm. A man takes risk in taking his hogs to any public show. We believe that under the system that has been used at Kansas City the last few years there would not be any more danger than showing them in Sedalia, Springfield, etc. So I want to extend an invitation to the Kansas breeders of swine to meet with us this year. Bring your herds over there, if we have a hog show, which I am satisfied we will have, and win the money if you can, and I think you can.

Governor Glick: Now, with the cattle-men their association puts up the money themselves for premiums. How would it be with premiums for hogs?

Mr. Hazelton: They will put up as much money as the hog men do. As an inducement to the hog breeders to come there and make a full rounded, symmetrical live-stock show, we will agree to meet them half way in the matter of premium money. The same proposition is open to any breed of sheep or any breed of swine.

Mr. Kirkpatrick: I have had a little experience in this line in Kansas City. I am glad to notice, however, that the American Royal people are disposed to encourage exhibits of hogs among their cattle at Kansas City. I am not prepared to say to-day that a successful show of breeding stock could be held in Kansas City. As many of you are aware, we did undertake that, and we did have a very creditable show of hogs in Kansas City—breeding hogs,

but nevertheless we had some very bad results, such as those who suffered will never forget; and while every precaution was used in examining the hogs and in the use of recognized successful disinfectants, which were used continually, owing to the unfortunate arrangements for switching facilities at Kansas City, several of the ears of hogs that were brought into Kansas City for exhibition were exposed to the tracks that carried diseased hogs out of the yards in Kansas City, which we now know to be the prime cause, the only cause, for the spread of cholera which followed the exhibition in that city three years ago. It proved very disastrous. Notwithstanding the great risk at Kansas City, such circumstances need not occur, and could be remedied, if the hog men would come up and make a show. As to Chicago, it is a pretty serious problem with a man who has a breeding-animal with show-qualities, to take him there and show him; it is a handicap we are suffering from. While Kansas City and Kansas do not need to add Chicago, I do not know but what we have a big lesson in Chicago this year. I looked upon it as very problematical, but their exhibition there this year has convinced me that they are on the right track. I want to suggest to the breeders of Kansas and to the managers of the Kansas City Royal: Chicago now has made a change in their exhibit on the proposition that all hogs that are exhibited in the show there be slaughtered there—be sold there for slaughter. The same provision can be made in Kansas City, and by extending it and making it on open sows, and the premium list would leave it optional. I would like to renew that proposition, not only to the breeders here but to the management of the show. I would like to have an expression of that kind from this organization. I know the feeling of the stock-yards people is to encourage these exhibits of swine there just as much as cattle. Whether they will be as liberal in putting up their money in premiums I do not know. Chicago is their competitive market. That is well recognized. Chicago is on the border of the hog-belt. Kansas City is near the center of the hog industry of this country. I think that the management of this is just a little parsimonious, and possibly if it was expressed that way they might become a little more liberal.

Mr. Kirkpatrick: We appreciate just as much as the men who lost thousands of dollars worth of valuable hogs the unfortunate circumstances which occurred to them in 1902, when we had the only successful hog-show. But I want to say something and I do not know whether Mr. Kirkpatrick knows it or not, and that is, the manner in which these hogs were handled in Kansas City, and the fact that they were exposed was due to incompetence and neglect on the parts of the railroads and stock-yards company and not the switching facilities or terminal facilities. It was the first year we had a hog-show. The proper precautions had not been taken for handling the hogs after they landed in the city. I do not believe there is any more danger than in exhibiting in Des Moines, providing there is as much precaution taken as there was in the last few years.

Mr. Kirkpatrick: I wish to say that I do not want you to understand that I have undertaken to criticize the management of the American Royal, especially the stock-yards people, or lay any fault to them for the trouble we had in that show. I do not think they were to blame. I think it is a matter that the railroads explicitly performed. I apprehend that that trouble would be entirely eliminated. I did not attend the Chicago International, as I would like to have done, and I do not know much about the exhibit there except through the Breeder's Gazette. I would say that my pre-dilection would be for a breeders' show at Kansas City by all means, if the breeders will lay aside their prejudices against the trouble that might occur.

Mr. Mains: It was stated that a show could be held there as safely as in any of the State exhibits—Illinois, Iowa, or Nebraska. Now, I don't believe it is possible to hold a swine-breeders exhibit at Kansas City and be as safe and immune from disease as those other places at Springfield, Hutchinson, Topeka, or Des Moines. Visitors at the Royal Show generally go through the stock yards, and of course they are in there inspecting the hogs, and they are more liable, it seems to me, to import the germ in some way or other. It can be done

very easily, and while all the precautions may be taken against it; and yet, while passing through where it is existing it can be carried into this show, and the breeders all over the States are interested in the spreading of this disease. A few men may take the risk, go there, and spread the disease. It may be possible that you can have a swine exhibit and prevent any spread of disease, but I do not think it is nearly as safe as those other places.

At this point President Potter said that he had a few matters to present for the consideration of the meeting, as he had mentioned the day previous:

1. Pay your dues. We can not long run this organization without the means. It takes money as well as brains. Now, our worthy secretary has furnished us the brains; he has managed our work in a splendid manner. I do not know how we could get along without him. I hope he will live long and give us many years of service yet. But it takes money to publish these excellent reports. Look at those on the desk—some very fine speeches there from the best men in our country. Our dues are very light.

2. The greatest interests in Kansas (that is, the stock interests) should have reasonable encouragement by legislative appropriation to publish our proceedings, and assist as far as necessary in the expense of a State fair at which we may exhibit our stock. See that such men go to the Legislature as understand your interests, and you can do it. It is a disgrace to the stock interests of Kansas to say that you can not do it. You can. You don't go to the primaries, that's all. You don't look after it, when the servants of the "dear public" are looking after them. That is the limit of their interest in the State of Kansas. You should have had other men there, and you can have them there. How many of you think I have given you a receipt that can not be carried out? Every stockman here knows that the stockmen have control of the election in his county. In this age of combination and corporate power, in the business world, supplanting the individual by corporation in the production of all that farmers have to buy, your president calls upon you as one of the most intelligent and important organizations in Kansas to attend the primaries and conventions and see to it that such men go to the Legislature of our State and to our Congress as will give the people proper protection against the greed of corporate power. That is an easy thing to do. You have not done it, that is all. Will corporate power own us and control us, or will we control them? (A voice: "They own us to-day.") They own us to-day. Quite right. We have seen it demonstrated, and they own us because we have been absorbed in our especial business, and they have been absorbed in their special business. Our special business has been to look after our stock; their special business has been to look after us and see to it that we do as they have cut and cried—often outside the State of Kansas, over in Missouri—and they come here and ask us to adopt the work that they had done there. It comes to my knowledge since I left home that to-day there is one of the most powerful political combinations that was ever formed in Kansas (we are talking here now in our little family), whereby a coterie get together and run the politics of this State, and run the business interests of this State so that the profit of it shall go into their coffers. It is true the business men got their hands off the one thing, and in raising horses and cattle and hogs, combine with it a little good, sound, business administration sense in the affairs of our State. Now, I am a Republican, and have been all my life, because I believe the Republican party comes nearer protecting the interests of the masses than any other party. My friend Glick is a Democrat because he believes the same in reference to the principles of the Democratic party.

Governor Glick: Will you please let me ask you a question? Who is protecting us against the wheat combine and the elevator combine?

President Potter: If these parties, Republican and Democratic, both lose sight of the high calling which the people have marked out for them, what use have the people for these parties? Gentlemen, I am a Republican, as I have said, because I believe it comes closer to the people, but I believe in being a man rather than a partisan. Now, we might go on by the hour, when you bring in illustrations such as our friend Glick has referred to. To me, one of the most humiliating scenes

Dietz Lanterns

The people who study lanterns and know what they ought to get and what not to get in a lantern are Dietz buyers. When they know all about the can't-leak oil pot, made of tin without a speck of solder, the best quality glass, tin and wire, the convenient side lever, the all-round convenience, the cleanliness, the safety of a Dietz Cold Blast lantern, a dealer has trouble in selling them any other. Then, when they think of the

"Clear, White Light of the DIETZ"

that settles it. You'll find a Dietz lantern dealer in most every town. But before you go to buy let us mail you free a book to post you up a little. You'll not be persuaded if you're posted. Then if you find no Dietz dealer in your town, just write us.

R. E. DIETZ COMPANY,
67 Laight St., NEW YORK CITY.
Established 1840.

SECURITY Stock Food

is sold on the honest plan of satisfaction or no cost. This is a straightforward plain talk and means just what it says.

Use Security Stock Food (glutenized) for growing animals; for fattening animals; for work horses; for milch cows. The Food won't cost you a cent if you can't see that Security Stock Food has saved feed, made quicker growth; kept your animals in better condition, given more milk, and made you more money. Write us if not satisfied and we will refund price in full. You are the sole judge. No questions asked.

For five years this guarantee has been on every package sold. It also covers Security Poultry Food, Lice Killer, Gall Cure, Colic Cure, Worm Powder, Calf Food, Heave Remedy, Healer and Rheumatic Liniment. Security preparations are sold by dealers in almost every town in the United States, who will recommend them highly and "backup" our guarantee.

SECURITY IS THE ONLY GLUTENIZED STOCK FOOD.

SECURITY STOCK FOOD CO.
MINNEAPOLIS, MINN.

CAR-SUL

The Disinfectant Dip
That Is Guaranteed.

Stronger and more efficient than any other. Absolutely harmless. Does not gum the hair, crack the skin, or injure the eyes. Kills all lice and vermin. Cures scurvy, mange and all skin diseases. Heals all cuts, wounds, galls and sores. For hogs, cattle, sheep, young stock, poultry and general household use it has no equal.

Send For Free Book

on care of hogs and other livestock. If your dealer does not keep Car-Sul, do not take an imitation but send to us direct.

Gasoline Engine Superiority

When a man invests in a farm power, he owes it to himself to get the best that can be bought for the money.

The modern business farm can no longer be successfully operated without a power of some kind.

The best, most economical, and safest farm power is a gasoline engine.

The best engine is the

I. H. C. Gasoline Engine.

Why? Well, because it's so simple, easily kept in order and operated definitely.

It develops the full rated horse power and sustains it against the heaviest load.

It is safer, cheaper and more efficient than steam power.

It is adaptable to any and every use requiring a power.

Among its many uses may be named:

Shelling, Husking and Shredding Corn; Grinding Feed; Cutting Dry Fodder and Ensilage; Pumping; Sawing Wood; Separating Cream, Etc.

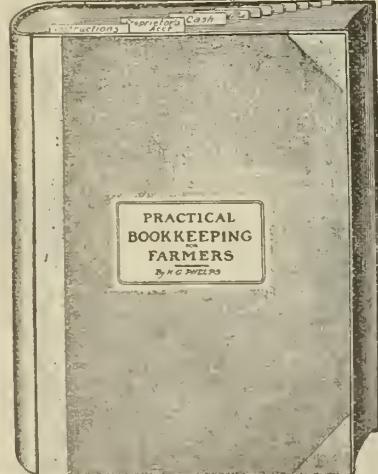

I. H. C. engines are made in the following styles and sizes:

Vertical, 2, 3, 5 Horse Power.
Horizontal, Portable and Stationary, 4, 6, 8, 10, 12, 15 Horse Power.

If interested in powers in any way, go to the International Local Agent and have him show you the I. H. C. gasoline engine, and supply you with catalogues, or write for further information.

WRITE FOR CIRCULARS.

that ever transpired in our beloved State transpired a couple of weeks ago down in the room of the Railroad Commission, the great milling industry of Kansas, whose beautiful edifices adorn nearly every town in our State, whose intelligent owners and whose business ability and push and enterprise would be an honor to any gathering anywhere; when the interests of the masses of the State—the great wheat-producing masses which have given our State such a reputation as I told you about last night—the grain markets of the world stopped to find how conditions are in our State—when the interests of those who bring forth the great wealth-producing article of wheat come up for a little favorable consideration, and are compelled by corporate power to bow down before that power and interplead that these masses have no relief, I am humiliated. I want to say to you gentlemen that I feel that that was one of the most humiliating things that ever occurred in this State, but it is one of the greatest revelations of the strength and influence of this corporate power in our State; and when I talk of corporate power what do I mean? I mean the power that you have given certain individuals through your representatives in this State, and if you had the power to give these organizations this influence is it not time you were acting again and sending some agents there that have the power to curtail this influence? Shall the thing formed stand up before the world and say to him that formed it: "Why hast thou made me thus?" It is time the people were aroused.

Governor Glick: You have given us a pretty good pointer, but you have only given us half. You have not given us half. (The Ex-Governor went on to speak of the pass evil in connection with judges of courts, and spoke of a corporation sending a judge and his family to Boston in a private car, and paying for their entertainment). You have got to get after the courts. You have got to find out whether the man you are voting for for judge has the courage to refuse passes from railroad corporations, or from any other corporation. You have had a good example in Mr. Bonaparte who refused to accept railroad passes from any railroad in the United States. You do not want a judge who has to have a separate pocket-book to carry his railroad passes in.

President Potter: We are going to make it a criminal offense to accept a pass when we get the right kind of a Legislature.

Mr. Harrington: I know of no people in Kansas that are ahead of or above the farmers of Kansas. I believe it is the best calling in the State. I have heard no man say one word against the Governor of the State of Kansas, and you won't hear it from me. He is my Governor now, and when the Governor of Kansas stands for the laws of Kansas I stand for the Governor of Kansas. We have a whole lot of laws in Kansas that are not obeyed. They ought to be. I believe every law on the statute book ought to be enforced, whether you like it or whether I like it. We put in our old friend Robison for Railroad Commissioner and I believed he had backbone, and I watched him the other day when the railroad hearing came before him, and I thought he would surely stand firm. I found him like the Dutchman that cut off his dog's tail a little bit at a time so it wouldn't hurt him so much. I think he ought to have stood for 15 per cent. Trusts and combinations are growing up all over the State of Kansas. We have a grain-dealers' trust in Kansas. It ought not to exist twenty-four hours. It's an illegal body and ought to be suppressed, and I have told them so more than once, but as a grain-dealer I can not fight the great corporations of the grain-dealers. If these men would take hold of it and wipe it out, I would be very glad of it, but as a grain-dealer I know very well I can not fight it. I know very well if the trust or combination should report to the railroad company that I had been kicking over the traces, I would be held up. I have been held up before, but there is or ought to be a power that can protect the people of the State of Kansas. We Democrats cut very little figure. We wish to have these things done, and we will do you all the good we can, and if you catch a man in office who does not carry out the principles announced by Mr. Potter and Mr. Glick we will just try and get him out as quick as we can. You have a man in the presidential chair who suits me the best of any Republican

you have ever had there; I think there is Democratic stamp about him, and I am disposed to take him seriously; and I am disposed to assist the President of the United States in every way possible. But you have got some old, superannuated Senators down there, who have bought their way into Congress, who will block the game. Go to work and see to it that you get men in the United States Senate (if you have not got them there) who will stand by the President. It's a question in the State whether the railroads shall go out of the governing business or whether the people shall go out of the governing business. We have given them special privileges and they are wanting more all the time. You feel and I feel that we are being appressed by a corporation that we have built up. We do not want to tear it down, but we want it to get right.

Mr. Kirkpatrick: Mr. Potter occupies the throne to-day and he has a right to criticise Mr. McGuire and Mr. Harrington. But there is a power greater than the throne and that is justice; there is a power greater than justice and that is the people. It is the people we want to arouse to-day, and certainly Mr. Potter's suggestions there are right to the point, and if the committee on resolutions do not take this into consideration and say things which will arouse the people to a sense of obligations to this commonwealth, I hope you will do it yourselves.

Mr. Gaines: The trouble with the people to-day is they are lacking backbone. They have not got enough spine. Our president here has the spine, and he is not afraid to get up here in public and say what he believes. The trouble is as Brother Kirkpatrick expressed it—the people are to blame. You want public opinion? Look at the last Legislature, when the people were aroused as to needed legislation to fight the Standard Oil Company. What was the result? Why, the Legislature said, we will do it. Then one of the short-grass legislators, a lawyer now indicted by the federal grand jury of this State, wrote the law, and the Supreme Court said it was unconstitutional.

President Potter: You will hear this statement, that certain individuals are fighting the railroads. I do not know of a man in the State of Kansas who is fighting railroads. I have been closely connected with this transportation question for years. The organization known as the Kansas Stockmen's Association, to which you all ought to belong, has been accused by the railroads—by a leading freight agent in Kansas City: "You Kansas cattlemen have cost the railroads \$2,000,000." What did he mean by that? That we had taken that out of their treasury? No, that we prevented their going down into our pockets and taking out that two millions extra. Gentlemen, that's a false issue raised by railroad men and railroad influence, intimating that we were trying to injure one of the greatest commercial industries of the State of Kansas. We are proud of the railroads and of what they have done for us, but let us see to it that they keep in their proper place.

The Dairy Cow.

By Prof. O. Erf, Dairy Husbandry Department, Kansas Agricultural College.

I just have a message for the dairy cow, that old animal which has redeemed Kansas; that old animal which to-day nourishes about 65 per cent of the infants of the country. I have a word for her because she is profitable; because wherever she is introduced she brings prosperity into that country. You may ask, "How is this, and how can you prove that statement?" I can only cite you to the East. Go back into the Mohawk Valley, and you will find one of the most prospering countries of the world, brought about by dairy conditions. You will find that there land is worth \$100 to \$150 per acre. Go across a hill and you can buy land for \$25 and \$10 per acre. Of course, there was a certain advantage in that particular country. That valley had a railroad which transported the milk to the city; the other valley did not. The Mohawk Valley consequently was adapted for the dairy while the other valley was not. It is for this reason that land is high-priced in that valley. I can cite you to a good many other cases. Take, for instance, Jefferson County, Wisconsin. Some 25 years or 30 years ago that was a barren county. Those of you who are familiar with that section of the country know that it is very hilly.

5,000 Rifles SEND NO MONEY
FREE TO BOYS

Just send us your name and address so that we may tell you how to get this fine rifle **Absolutely FREE**.
YOU CAN HAVE ONE
As we are going to give away 5,000 of them. We mean it, every word, and this is an honest, straightforward offer, made by an upright manufacturer who always do exactly as they agree. All we ask is that you do a few minutes work for us. It is so very easy that you will be surprised. This handsome rifle is not a toy rifle, but is a genuine steel, blue barrel, hunting rifle, that is strong, accurate and safe and carries a 22-calibre long or short cartridge. If you want a fine little hunting rifle, just write and ask us for particulars. They are free and you will surely say it's the best offer you ever saw or heard of.

BE SURE AND WRITE AT ONCE
before the 5,000 rifles are all gone, as the boys are taking them fast. Address

Tired Nervous

When you feel languid, tired, nervous and irritable, your vitality is low—your supply of nerve energy exhausted, and your system running down for lack of power,

The organs of the body are working poorly, or not at all, and you are not getting the nourishment needed. This soon impoverishes the blood and instead of throwing off the impurities, distributes it all through the body. This brings disease and misery.

Feed the nerves with Dr. Miles' Nervine, a nerve food, a nerve medicine, that nourishes and strengthens the nerves, and see how quickly you will get strong and vigorous.

"My wife suffered with nervousness previous to a recent attack of typhoid fever, but after her recovery from the fever, she was much worse, and could hardly control herself being exceedingly nervous when the least excited. She was very restless at night, and never had a good night's rest. She also suffered much from nervous headache. Dr. Miles' Nervine was recommended by a friend. After the first three doses she had a good night's rest, and at the end of the first week's treatment she was wonderfully improved. Continued use of Nervine has completed her entire cure."

OTTO KOLB,
1021 Cherry St., Evansville, Ind.
Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind.

When writing advertisers please mention this paper.

At that time Switzerland became over-populated, and they sent some of their people to this country and they located in that county. Not being accustomed to doing anything else but dairying in their native country, they began that practice in Jefferson County. To-day we find Jefferson County one of the richest of Wisconsin. Besides other crops, they grow clover, alfalfa, wheat, oats, corn, equal to that we are raising in Kansas. Besides these crops, they are selling over three million pounds of cheese. The land of that county, which was barren twenty-five years ago, has value equal to that of the bottom lands in counties near the lake. Come farther west—or go back to the Western Reserve—and you will find the same conditions. Go down into the Elgin district of Illinois—right around Chicago—and you will find there electric lines running all through that country—fine hogs, nice lawns, good roads, anything that man can wish for. Some people say that dairying is not profitable, they know because they have tried it. I might say that of a good many cases in Kansas this is true, and I am going to give you an experiment which proves that condition. Fifteen cows—average cows—were purchased, and a yearly record was kept of these cows. The first cow produces butter-fat for 8½ cents a pound. In other words, she charges you 8½ cents for the feed to manufacture a pound. No. 15 produces butter-fat for 24 cents a pound—24 cents she'll charge you for every pound of butter-fat she produces. Let us divide these cows according to their records. We selected five cows which produce butter-fat at an average of 9 cents per pound. We selected another lot because each produces butter for 15.8 cents per pound. Another lot produces butter-fat for 20.4 cents per pound. Now, how are we going to remedy the situation, and how are we going to make dairying in this lot of cows more profitable? Simply, sell the last ten cows and you will have a profitable dairy. If you are getting 15 cents for butter-fat, the middle lot of cows will just balance; though you are not making a profit they will not make you a loss. The top lot will make you 5 cents gain. Now, then, if you will sell the last two lots of these cows you will make \$140 clear profit out of those five remaining cows. If you keep all of them, you will not make any profit at all. Just milk the five good cows and sell all the rest and you will make a profit. How do we know which cows to sell? It is simply this. Take a piece of paper and nail it up against the cow-stable wall. Tie a lead pencil to that. Tie it good and strong, and for three consecutive days put down the weight of the milk produced by that cow. Take a sample and test that milk. Do that for three consecutive days every month, and that will give you a record that is approximately 95 per cent accurate, compared with the record which you would have if you would take the sample every day and weigh the milk. That system is sufficiently accurate in finding out the good and the poor cows. It is an easy matter to estimate approximately the value of the feed that you give these cows during the year, and by a simple computation you can find whether you are making a profit or loss on each particular animal. It has been said that if the angel of death would sweep over this country and kill about half the cows, the farmers would wake up the next morning better off. I believe there is a good deal in it.

Now, as to the matter of feeding. Feeding a dairy cow is a subject of great importance. A cow that produces milk must receive the nutrients that she produces in the milk. We take a number of bottles which represent constituents in milk. One has a pound of fat, taken out of 20 pounds of milk; one has milk sugar, one ash, and one the protein compound. Now, in order for a cow to produce twenty pounds of normal milk you must feed that animal food which contains these compounds approximately in that proportion to do it economically. The protein is the most essential component. It is the highest-priced of any component that you have in the feed, and goes to make up muscle in case of a steer or a hog. In the case of a cow that is producing milk it gives the white part of the milk, the cheesy part. In the hen, of course, it produces the white of the egg. The next important constituents are the carbohydrates, or starch compounds. These go to make heat and fat, and in the milk they make milk sugar, and they also make butter-fat. The fats in the feed go to make up butter-fat and at the same

time supply the heat of the body. The ash, of course, is a very important thing, and every farmer should feed a certain amount of it in the way of roughage. Cows must have roughage as the ash constituent. This is also supplied by salt. Always have salt before an animal, especially a young animal. In the formation of bone it requires a great deal of ash. So essential is the ash compound that in China they use it for executing their criminals. They give the criminal all he wants to eat, but deprive him of the mineral salt. Frequently you see calves gnawing at posts, boards, or gnawing the ground. They are after salt. They are after mineral matter. Nature gives them that peculiar instinct to get salt.

I said that carbohydrates or starchy material produces heat and fat, and also that fat produces heat and fat. What is the difference between the two? It is simply this. Starches are generally in plants. You do not find starchy compounds in the body except those that have been immediately absorbed by digestion. Suppose you had a steer with 500 pounds of fat on him; transform that fat into carbohydrates and he would be walking around two and a half times larger than he actually is. There are two kinds of feeds, the roughages and the concentrates. We feed the concentrates to give nutrients which are easily assimilated. We need the roughages to give bulk, to start the motion of the intestines. We can not feed roughages altogether and get the best results. We can not do that because the nutrients are not there in sufficient quantity. We will take an illustration for your use. We can eat a pound of beefsteak quite nicely each day without any inconvenience. Suppose we should supply you with a feed of strawberries. You would have to eat 87 bushels every day in order to get the same amount of nutrients as you get out of that beefsteak. This gives us the reason why we need the roughages and why we need concentrates.

Now comes the question of balancing these rations. We say that protein is to produce casein in the milk, and muscle in the steer. If you feed too much protein, you overtax the kidneys. You cause an irregular disturbance in the body. The protein has to bear being transformed into fat, but you can not transform fat into protein. The kidneys do most of this work, and in the case of a horse when you feed too much alfalfa hay, or in other words, when you feed too much protein, you have an azotic condition. In a human being you will have Bright's disease. There is another problem. I said that any feed that is high in protein is also expensive, consequently, if we can substitute a cheap feed, a starchy feed like corn, and feed just the right amount of protein, we will reach two results: First, it will be cheaper, and second, it will be more easily digested. In the case of a cow that produces this amount of milk we need daily 2½ pounds of protein, we need 13 pounds of starchy material and half a pound of fat. That will supply the nutrients in right proportion to give twenty pounds of milk with the normal constituents.

How can we balance these constituents? There are a great many bulletins issued which give all sorts of combinations from which you can select. Some of these will apply to your individual conditions. But I might say that one of the most practical rations, one of the most economical rations that can be devised for an agricultural State like Kansas is 18 pounds alfalfa hay and about 8 pounds of corn. That will give these constituents in just the right proportion. I am going to show you the reason why we should feed 18 pounds of alfalfa hay in connection with 8 pounds of corn. The protein is much less in the corn than in the alfalfa hay. We only have a half pound of protein in the corn, while we have pretty nearly two pounds in the alfalfa hay. We have five pounds of starch in the corn and we have only three pounds in the alfalfa hay. We have a little, about .6 pound of fat in the corn, while we only have .3 pound in the alfalfa hay, showing you that the relations of these constituents are different with the different feeds. Bear in mind that all feeds contain protein. All feeds contain carbohydrates, but their proportions are different. We must find a combination that will give us the proportion such as I have stated—2½ pounds protein, 13 pounds carbohydrates. Now, in 18 pounds of alfalfa hay we have two pounds of protein; and fed in connection with eight pounds of corn which contain ½ pound of protein we have the balanced ration, because here is the other half

CHARLES C. SMITH, Manhattan, Kansas

pound of the protein. We have over five pounds of starch in eight pounds of corn, and in 18 pounds of alfalfa hay we have over 7 pounds of starch. The two together will give us the 13 pounds that is necessary, and the same is true of the fat.

A word in regard to the care of the cow. In order to have the best results from a dairy cow give her the best care. We found last winter by a reduction of 40 degrees in the temperature a 10-per-cent decrease in the flow of milk, and if you have a moist condition, if you subject your cows to a rain, a 20-per-cent decrease in temperature will amount to the same as a 10-per-cent decrease in the temperature when the atmosphere is dry. So build her a nice stable if you want her to be profitable. Another point: In coming this afternoon from Manhattan—just about time to get the cows—I noticed two boys on horseback. They were hunting the cows. They were in the corn-stubble, and they had a dog, and they were bringing the cows in "lucky-cut;" just as fast as the horses could gallop. I will venture to say that there wasn't 50 per cent of the milk left in those cows when they reached the stalls. I wish that I could tell you more about these conditions, but beyond all circumstances I advise you to keep a few cows. I believe it is the best thing for Kansas. I believe that in future years you will regret it if you do not keep a few cows. The cow is practically the only animal that will give it up all the fertility of the feed and can be taken back onto the soil. I have stated to you a case where a county has been redeemed by this fertility. I want to show you a chart which gives the average compositions of manure from cows. I want to show you a chart that estimates the

value of manure from a single cow at \$25, \$29 worth of fertility that they can produce yearly. Now, you might say there was no need of my dwelling upon that subject. We have all the fertility that we need for ages in our soil. Ten years ago I heard that remark in the great rich State of Illinois, where they have this type of muck soil. To-day they find it profitable to use commercial fertilizers simply because they have not taken care of the food elements.

DISCUSSION.

Mr. Robison: I did not hear you compare but two feeds—alfalfa and corn.

Professor Erf: I think they are the best and cheapest. Another good ration is alfalfa hay about 17 pounds, about 7 pounds of corn and two or three pounds of bran—this makes an excellent ration. I might say that with 18 pounds of alfalfa and 8 pounds of corn the third cutting of alfalfa or even the fourth will give better results than the first or second cutting.

President Potter: Your ratio would be a little over 1 to 5 for fattening steers, between your protein and carbohydrates.

Professor Erf: For fattening steers, yes, sir.

Professor Kirkpatrick: I have a few cows; I am not making a business of dairying, but have got to have some milk for my pigs, and I am all wrought up over the proposition that I ought to know what my cows are doing. I would like to know how I am going to test my cows to find out. Is there any short cut now by which I can test my few cows without going to great expense?

Professor Erf: The Babcock tester will cost you about \$4. You can afford to keep a man to test the milk.

Mr. Kirkpatrick: That is the best method, then, Professor?

Professor Erf: Yes, sir.

Mr. Coburn: What is the maximum amount of alfalfa that a man would be justified in feeding a dairy cow in milk if she was given a suitable quantity of some grain?

Professor Erf: That depends greatly on the alfalfa. Of the first cutting you can feed an almost unlimited quantity.

President Potter: Do you think it unsafe to let our stock run to alfalfa stacks—let them have all the alfalfa they want?

Professor Erf: For the first and second cutting I should suggest that would be all right, but for the last cutting it would not be advisable. I understand our friend Robison allows his Percherons to run right to the stacks.

The professor was asked regarding the dual-purpose cow.

Professor Erf: The dual-purpose cow is all right for the dual-purpose man, but the dairy cow is the kind for the dairyman. I must admit that some farmers make a great deal more money from their dual-purpose cows than they would from a Jersey or dairy cow. The dairy cow is a bundle of nerves, and any excitement, any uncomfortable condition that is brought about will decrease the flow of milk. The dual-purpose cow can stand a great deal of these uncomfortable conditions without making any difference in the flow of milk. Now, the question as to when a dual-purpose cow becomes profitable is simply a question of record of that individual animal. This matter of dual-purpose is one that is talked about much, but records are not given of these animals. If you can get a cow that produces a large amount of butter-fat and at the same time produces a calf that is worthy of raising to a steer, so much the better; that is a cow we want to propagate. But remember when you are breeding for a certain thing you have to breed along that line. Remember you cannot shoot at two objects.

A Member: I don't hardly coincide with the gentleman. He says we cannot shoot at two objects at the same time. We can if we have a shot-gun that scatters.

A Member: I have attended the International show every year but one since it was established. I never saw dual-purpose animal stand up in that ring. When it comes to these western range calves, they have gone to Chicago year after year and won everything. I do not believe the man ever lived that saw a high-class show cow, from a beef standpoint, that could be put into the milking test, and I do not believe he ever saw anything that could be reversed the other way.

Mr. Blair: The dairy cow is of nervous temperament; now, in excitement we tend to lessen the flow of milk and also decrease the amount of butter-fat. I want to ask this question: Does the amount of butter-fat depend on the

nervous system in the cow, or the physical structure?

Professor Erf: The nerve is the engine which propels the whole business. Do you know that a milker can increase the flow of milk, and not only increase the flow of milk but increase the butter-fat constantly simply because the nervous system accords with the man. The cow likes the man; throws out her sympathy to the man, and we can not attribute it to anything else but the nervous system. Of course, if you do not feed a cow, you can not expect milk from her.

A Member: I admit that a good many of us are not capable of discussing this question, but I believe the Red Polled people are breeding what they call a dual-purpose cow.

Mr. Halderman: I would like to give a little of the experience I have had and get a little information along with it. I have milked dairy cows, or so-called dairy cows, all my life. For the last twenty years I have milked the purebred Holstein. Prior to that time I milked Shorthorns. I found some of the Shorthorns that were very good milkers for about four months, but after that time they would fall off in milk, and would lay fat on their back. But the last twenty years I have milked dairy cows (Holstein) exclusively. I kept a herd of Jerseys along with them in the same barn. Some of the Jerseys were good cows, but I must say there were four-fifths of them that I do not want in the barn.

Mr. Stone: I want to say in the first place I have as good authority as there is in this State that there is only one cow in seven in Kansas that is paying for her keep. Now, you people may think that is an exaggeration, but it is true just the same. These records show it pretty well, but those probably are selected cows; there are cows that will drop a long ways below that. If you dual-purpose men have got a cow that is not producing over and above her keep, you want to dispose of her.

Professor Erf: I want to say that I am not opposed to the dual-purpose cow. We have Red Polled cattle in our dairy that are good cows; but I want to say one word more, that the profit on an animal depends on the individual. It is the individuality. The gentleman back there told the whole thing in a nutshell; it does not make any difference what kind of a breed you have got. Figures will tell whether they are profitable.

Government Encouragement of Imported Breeds of Horses.

Geo. M. Rommel, Animal Husbandman, Bureau of Animal Industry, U. S. Department of Agriculture.

In the discussion of this subject we shall consider what has been the Government's policy in history, what is its policy at the present time, and what may be its policy in future, always keeping in mind the effect of these policies on the horse-breeding industry. As the tariff laws in this respect have been drawn to apply to all classes of domestic animals, the encouragement of the importation of horses for breeding purposes is only a part of the whole, although the horse-importing business has come to be the most important. It will be necessary to consider the subject first as it applies to all classes of animals.

The Historic Policy.

The historic policy of the United States Government regarding the importation of domestic animals has been that when such animals were imported for breeding-purposes, no duty was to be imposed by the Customs officers. One of the earliest tariff acts on the statute books is that of February 27, 1793, which provides "that the several laws of the United States, imposing duties on goods, wares, and merchandise imported into the United States, so far as they may be deemed to impose a duty on horses, cattle, sheep, swine or other useful beasts imported into the United States, for breed, shall be repealed." With one exception every tariff law enacted since that date has placed breeding animals on the free list. That exception was the act of May 16, 1866, which placed a duty of 20 per cent ad valorem on all animals imported. It was superseded by the act of July 14, 1870, which removed the duty on "animals specially imported for breeding-purposes from beyond the seas, . . . upon proof thereof satisfactory to the Secretary of the Treasury."

Up to the act of 1866, no restrictions seem to have been placed on the use of this privilege, and the act of 1870 is the first one which specifically provides that satisfactory proof should be submitted, that the animals for which the duty-free privilege was claimed, were actually imported for breeding pur-

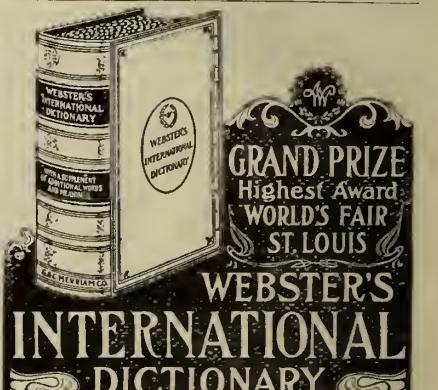

WHAT THIS PHONE SAVES EVERY DAY

C It saves going to town for market reports, it saves the buyer of farm produce a trip to your farm and brings you a sale. It saves the farmer's wife getting Sunday dinner "because John just telephoned that he couldn't come." It saves the doctor an extra trip and you more than one half of the bill because you can stop him from coming when you don't need him. This telephone saves extra trips to town, extra wear on the team, saves time, temper, money and in many instances life itself.

C This telephone is the "Eaco," and is the most complete farm telephone made. There is nothing that can get out of order with ordinary use, being made strong and compact. Eaco phones are handsome from every point of view and are low in price. Each telephone is furnished complete with two cells of 1900 Dry Battery and all are equipped with X. P. Condensers. This makes it possible to ring any subscriber whether people "listen in" or when the receivers are off the hooks. On a line filled with 20 bridging telephones each phone equipped with an X. P. Condenser we will guarantee to ring the 20th phone with 18 receivers off the hooks provided it is possible to ring each subscriber with the receivers on.

C Let us tell you more about the many points of this special farm phone through our booklet, "How to Buy the Right Phone." Mailed free.

poses. These restrictions were necessary to protect American breeders and to prevent frauds upon the Customs, which were obviously possible under the old laws. They have been broadened considerably as I will point out to you later on.

This is our historic policy—that domestic animals of all kinds, not only horses, but cattle, sheep, hogs, and similar animals of the farm, when of superior merit and imported with the idea of improving the domestic stock, should be charged no duty, but their importation encouraged. Europe began the improvement of the breeds of live stock long before the new world; here pioneers started out with the same kind of animals as they had in the old homes on the other side of the Atlantic (and it is not unreasonable to suppose that they were good ones of their sort), but these pioneer farmers were too much occupied with their struggles with the forest, the Indians, and with politics to devote a great deal of attention to the improvement of their breeds of live stock. When they finally wished to do this, they found Europe far ahead of them and naturally saw that great strides could be made by the use of the best animals from European breeders. The idea seems to have been that this improved blood would be used to give our farmers a more superior grade of breeding stock than could be obtained from native sources, and that liberal provisions of the tariff would enable our breeders to establish these improved breeds at the lowest possible expense.

The Present Policy.

You have seen how the first restriction as to the purpose for which breeding animals were imported was imposed by the tariff act of 1870. This remained unchanged for twenty years until the passage of the McKinley act on October 1, 1890, when the first restrictions were imposed as to the character of these animals. This law provided that "Any animal imported specially for breeding purposes shall be admitted free: Provided, That no such animal shall be admitted free unless pure-bred of a recognized breed, and duly registered in the book of record established for that breed: and provided further, That certificate of such record and of the pedigree of such animal shall be produced and submitted to the Customs officer, duly authenticated by the proper custodian of such book of record, together with the affidavit of the owner, agent or importer that such animal is the identical animal described in said certificate of record and pedigree. The Secretary of the Treasury may prescribe such additional regulations as may be necessary for the strict enforcement of this provision." This remained unchanged for over twelve years.

In December, 1902, the Board of General Appraisers ruled that this provision applied only to animals intended for the immediate use of the importer and not for sale, and an additional act was passed on March 3, 1903, providing that the duty-free privilege could be obtained whether the animals imported for breeding purposes were intended to be so used by the importer or for sale for such purpose." This act also amended the phraseology of the preceding ones by changing "book of record" to "books of record," and stipulated that the privilege of free entry in these cases would be extended only to citizens of the United States. Under the provisions of these laws, the Treasury Department has issued the necessary supplementary regulations from time to time. All importers are familiar with them and it is hardly necessary to discuss them here.

The connection of the Department of Agriculture with this work dates from the passage of the annual appropriations act on March 3, 1893, which provided "that the Secretary of Agriculture shall determine and certify to the Secretary of the Treasury what are recognized breeds and pure-bred animals," under the provisions of the McKinley act then in force. This provision was included in each annual appropriations act for the Department until the passage of the Dingley act on July 24, 1897, when it was included in the clause regarding the importation of animals for breeding purposes.

The powers of the Secretary of Agriculture under these provisions apply to all points which may come up, touching not only what books of record shall be recognized, but the validity, authenticity and sufficiency of pedigrees and what constitutes a pedigree; and these powers have been sustained in the courts.

The Department certifies not only books of record doing business across the seas, but also those in the United States, the latter being certified to provide for the importation of animals

from Canada, as no Canadian books are certified.

Until 1904 the Department promulgated no specific regulations for this work. For about a year, the certification and supervision of books of record and pedigree record associations had been part of the work of the Animal Husbandry Office of the Bureau of Animal Industry, and on October 14, 1904, B. A. I. Order No. 130 was published. Up to this time the requirements for certification had been broad, and they still are, but a tendency to take advantage of them had begun to manifest itself among American associations, and it seemed necessary to take steps to exercise a closer supervision, so that the Department would have accurate means of knowing what associations were doing a live and legitimate business and were entitled to certification; this policy is carried out by liberal interpretations of the laws on broad lines without discrimination as to breed or sex.

Bureau of Animal Industry Order No. 130 makes provision for the application of new associations for certification, and requires each certified association to make an annual report to the Department and publish a volume of its book of record at least once in four years. All certified American associations must hold their books open to inspection by the Department, if such inspection is deemed necessary. Foreign associations are required to keep their books of record on file. In its dealings with the latter, the Department is guided by the advice of certified associations in the United States. American representatives abroad, and its own inspection of their books of record.

Up to date, 14 amendments to this order have been issued; dealing with the granting, withdrawal, or amendment of certification. The following table shows the number of books of record now certified:

Books of Record of Pedigrees Certified by the Department of Agriculture, Under the Provisions of B. A. I. Order No. 130, and Amendments 1-14.

	American.	Foreign.
Cattle	14	30
Horses	18	23
Asses	1	1
Sheep	21	13
Hogs	13	2
Dogs	1	4
Cats	2	..
Total	70	73

I have gone into this rather tedious discussion of Government regulation to show you the steps that have been taken to prevent fraud against the Customs and protect the interests of American breeders. The policy of the Government at the present time is to encourage the importation of animals of the highest class, whose value will more than compensate for their competition with the product of American breeders, the object being the adaptation of foreign breeds to our special conditions, or the establishment of American breeds by fusing the imported and native blood, the ultimate end being practical independence of foreign breeders. That this policy is sound does not seem open to question. America has the facilities of soil, climate, feed, and pasture to supply her own demands for breeding stock of all kinds. The quality of her wool, meat, and horses is unrivaled in the world's markets. If the high standard of these products is admitted, you must also admit our possibility to produce breeding stock of equal value.

Now, if we are to hold our own in the world's competition, we must maintain and even raise our standard. This means that the breeding stock which supplies our flocks, herds, and studs must be specially suited to our conditions, and, therefore, must be distinctly American. The door should always be open to let in the best blood lines and for new and desirable species, breeds, and families, but every introduction of this kind shall have to be made with great care and intelligence, especially when we shall have succeeded in developing types peculiarly our own.

The Future Policy.

No. 1 of Cattle, Horses, Sheep, and Hogs Imported for Breeding Purposes.

To obtain a satisfactory understanding of this subject, it is necessary to study the figures showing the number of animals imported for breeding purposes. The earliest year that they were separately enumerated was 1883, and the earliest year that the country of origin was shown was 1884. From 1881 the figures in the table are given for each year and for five-year periods. The imports for hogs are for consumption.

(Continued on page 160.)

A TRAINED NURSE

After Years of Experience, Advises Women in Regard to Their Health.

Mrs. Martha Pohlman of 55 Chester Avenue, Newark, N. J., who is a graduate Nurse from the Blockley Training School, at Philadelphia, and for six years Chief Clinic Nurse at the Philadelphia Hospital, writes the letter printed below. She has the advantage of personal experience, besides her professional education, and what she has to say may be absolutely relied upon.

Many other women are afflicted as she was. They can regain health in the same way. It is prudent to heed such advice from such a source.

Mrs. Pohlman writes:

"I am firmly persuaded, after eight years of experience with Lydia E. Pinkham's Vegetable Compound, that it is the safest and best medicine for any suffering woman to use."

"Immediately after my marriage I found that my health began to fail me. I became weak and pale, with severe bearing-down pains, fearful backaches and frequent dizzyspells. The doctors prescribed for me, yet I did not improve. I would bloat after eating, and frequently become nauseated. I had pains down through my limbs so I could hardly walk. It was as bad a case of female trouble as I have ever known. Lydia E. Pinkham's Vegetable Compound, however, cured me within four months. Since that time I have had occasion to recommend it to a number of patients suffering from all forms of female difficulties, and I find that while it is considered unprofessional to recommend a patent medicine, I can honestly recommend Lydia E. Pinkham's Vegetable Compound, for I have found that it cures female ills, where all other medicine fails. It is a grand medicine for sick women."

Money cannot buy such testimony as this—merit alone can produce such results, and the ablest specialists now agree that Lydia E. Pinkham's Vegetable Compound is the most universally successful remedy for all female diseases known to medicine.

When women are troubled with irregular, suppressed or painful periods, weakness, displacement or ulceration of the female organs, that bearing-down feeling, inflammation, backache, bloating (or flatulence), general debility, indigestion, and nervous prostration, or are beset with such symptoms as dizziness, faintness, lassitude, excita-

bility, irritability, nervousness, sleeplessness, melancholy, "all-gone" and "want-to-be-left-alone" feelings, blues and hopelessness, they should remember there is one tried and true remedy. Lydia E. Pinkham's Vegetable Compound at once removes such troubles.

No other female medicine in the world has received such widespread and unqualified endorsement.

The needless suffering of women from diseases peculiar to their sex is terrible to see. The money which they pay to doctors who do not help them is an enormous waste. The pain is cured and the money is saved by Lydia E. Pinkham's Vegetable Compound.

It is well for women who are ill to write Mrs. Pinkham, at Lynn, Mass. The present Mrs. Pinkham is the daughter-in-law of Lydia E. Pinkham, her assistant for many years before her decease, and for twenty-five years since her advice has been freely given to sick women. In her great experience, which covers many years, she has probably had to deal with dozens of cases just like yours. Her advice is strictly confidential.

Lydia E. Pinkham's Vegetable Compound Succeeds Where Others Fall.

Protected by Block Signals

Block signals are especially important during the winter months. The first railway in America to adopt the absolute block signal in the operation of all trains was the

Chicago, Milwaukee & St. Paul Railway

This railway today has more miles of road operated under block signal rule than any other line.

OPPORTUNITY.
They do me wrong who say I come no more,
When once I knock and fail to find you in;
For every day I stand outside your door,
And bid you awake, and ride to fight and win.

Wait not for precious chances passed away,
Weep not for golden ages on the wane!
Each night I burn the records of the day;
At sunrise every soul is born again.

Laugh like a boy at splendors that have sped,
To vanished joys be blind and deaf and dumb;
My judgments seal the dead past with its dead,
But never blind a moment yet to come.

Though deep in mire, wring not your hands and weep,
I lend my arm to all who say, "I can,"
No shame-faced outcast ever sang so deep
But yet might rise and be again a man!

Dost thou behold thy lost youth all aghast?
Dost reel from righteous retribution's blow?
Then turn from blotted archives of the past,
And find the future's pages white as snow.

Art thou a mourner? Rouse thee from thy spell;
Art thou a sinner? Sins may be forgiven;
Each morning gives thee wings to flee from hell,
Each night a star to guide thy feet to Heaven!

By Walter Maloney.

Familiar Features of the Roadside.*

Mrs. Mary Holsinger Rose.

The public ways of a Nation are vital. Good roads enhance, poor roads retard the wellbeing of a people. This adage has always been known, but not always acted upon.

Mother Rome, having a genius for placing her burdens on the shoulders of other people, did act upon it, and had roads built over 2,000 years ago which have lasted to this day. Twenty-nine military roads centered at Rome, which with their branches had a length of over 50,000 miles. Milestones marked the distances from all parts of the empire to a gilt column in the Roman Forum.

These roads were not easily built nor lightly undertaken. They were pavements of dressed stone blocks, with close joints on a foundation of concrete, which rested on a subfoundation of large, flat stones, the whole construction being three feet thick and from eight to sixteen feet wide. The Romans showed neither adaptability nor economy in their road-building. They built by main strength, and their roads ran in a straight line up hill and down dale. Macadam says: "Their construction was a kind of desperate remedy to which ignorance has had recourse."

In India and Persia there were a few good roads in early times. In the latter country there was built beside the public highway a private road for the ruler, which was kept in better repair, and from which originated the saying, "There is no royal road to learning."

Explorers in Mexico and Peru found excellent roads between the principal towns. One of the military roads of Peru is said to have been nearly 2,000 miles long, with tunnels through the mountains and bridges or ferries over the streams. This road was 20 feet wide and paved with flagstones covered with bitumen.

Working Out the Road Tax.

But no such highway was ever found within the borders of the United States, nor can be even now. Our earliest roads were Indian trails, upon which we are slowly improving. Note the simplicity of the American method of country road-building compared with the Roman. Some day when it is either too wet or too dry to plow at home, the farmer takes his slowest team and goes to work out his tax. He plows up the mud of the gutters, piles it unevenly in the center of the road and calls it "well done." Of course the first heavy rain washes it back to the gutters again. Ruts are familiar features of country roads.

Now, a common road is much simpler to build than a railroad, and we might pay our road tax in money instead of work and employ an engineer to construct our roads. But we, the people,

don't like to pay out the dollars, and we don't intend to make a lot of civil engineers into rivals of Carnegie and Rockefeller. Besides, the old system has its advantages. It furnishes a livelihood for a lot of road overseers who could not make a living any other way and our rural population are never liver-grown.

It has long been a reproach to us that our roads do not compare with those of Europe, but there has been an immense improvement in the last fifteen years. Ours is a big country, and it will take time to build good highways from New York to San Francisco.

The Unsightly Poles.

One of the familiar features of the wayside is the increasing number of telegraph and telephone poles. When the Japanese woke up forty years ago, and began to copy the ways of Western Europe and America, one of their first reforms was to commence cutting the beautiful shrubs or trees which lined their highways, and to plant poles instead after the foreign method. They thought these poles had a religious significance—were some sort of a Shinto emblem, else why should the large, fair, and wise barbarians plant them in such profusion? The resident foreigners protested so vigorously that the desecration was stopped—in Japan. Perhaps some day we shall have all the benefits of telephone or telegraph without the unsightly poles.

Literary and Pictorial Features.

Then there are the literary and pictorial features which so lavishly adorn the highways; fables in black and white which he who runs must read whether he will or no. Here on the right is one. "Geo. B. Peck's the growing store. Every day \$'s saved"—by Geo. B. Peck, of course. I have no \$'s left for him to save, so I turn away. On the left I read, "Poor paint is waste. Buy Devoe's," and straight ahead at the turning is the legend, "X Y Z's Clothing Store." I lift my eyes to the hills and there in gigantic letters is told the marvel and the wonder of Bull Durham. It stands on a pinnacle alone. No tree so brazen as to flutter a leaf before its splendor. The heavens are slow to declare their glory in the face of this glory on earth.

Saddest of all are the likenesses of two eminent men, dead philanthropists, who have suffered a slanderous billboard resurrection. Shame! that Geo. W. Childs is known to the young people of to-day only as a tobacco sign, and the noble sentiment, "I am for men" means nothing but a cheap cigar. George W. Childs hated tobacco, I am told, and fought against its use. There should be a way to protect a man's memory from such defamation. Let the Pete Dailys continue to sing the praises of the weed if you will, but let Geo. W. Childs and Henry George stand for the things they fought for in their life-time.

The Wayside Nuisance.

By the wayside, and near the road I most frequent is a familiar something intangible, unseen, but ever present. No cloud so black and no sky so bright as to dispel this olfactory offense. Its emanations fill the earth and rise to the heavens. You remember the poets thus describe it:

"The pigsty is a monster of such frightful mein
That to be hated need not e'en be seen,
But sniffed too oft, familiar to the smell,
We first endure, then take to it like—jell."

Of the truth in these lines I bear reluctant witness, for with sorrow do I confess that when the bank barometer is low, and the financial sky is black and the storm clouds of adversity threaten the domestic horizon, the head of the family talks of going into the hog business.

Once, in the early days of earth Father Adam called a great family council to give each and every animal a name. "No use to name the hog," said they, "because every one will know what it is, as soon as he sees it, any way." The special beauty of the hog-pen is that every one knows what it is without seeing it. Hogs are useful and hogpens have their places, but that place is not by the roadside where they are a daily offense to hundreds. Some day, just short of the millennium, the

Lowell Ingrain Carpet

WHY YOU SHOULD BUY IT

Because: It has been recognized for seventy-five years as the best INGRAIN manufactured—ALL WOOL.

Because: The goods are wound on a hollow stick which constitutes a trade-mark and guarantees that you are getting a LOWELL INGRAIN.

Because: Styles and colorings are up to date, in plain shades and figured patterns; closely resembling high-grade carpeting.

Because: LOWELL INGRAINS are so woven that they can be used on both sides: a feature decidedly advantageous. No one doubts the wisdom of covering a room entirely in a rural home, making it warmer and easier taken care of.

Ask your local dealer for a LOWELL INGRAIN when looking for a new carpet. Look for the hollow stick and be satisfied with none other than a LOWELL INGRAIN.

Manufactured by BIGELOW CARPET CO., New York

public will be protected from the nuisance of slop-fed hogs.

The Unattractive Tangle.

"A weed," says some one, "is a plant out of place." There are many plants out of place along our highways. It is one of the penalties of a fertile soil and a glowing sun that weeds innumerable spring up where the man with the hoe is not. The roadside is an impenetrable jungle with a background of sumac, elder, and buckeye; shrubs beautiful in themselves, but with their graceful outlines lost in the tangle of rank growth. But surely if we can ever forgive lavish nature and careless man it is now. The horseweed, the burdock, and the jimson weed abound, it is true; the mullen, the stinging nettle and the thistle are with us, but the wild morning glories are a-bloom, the dark green of the sarsaparilla vine with its glossy berries covers much that is unsightly; the black-eyed Susies peep out everywhere; the wild asters are in their purple prime; the sunflowers lift their heads reverently to their sun god, and the goldenrod is a golden glory. But when we have acknowledged all the beauty and given thanks for it, the fact remains that miles of tangle does not make an attractive highway. The eye longs for open spaces and green-sward. The brief reign of the autumn flowers does not atone for the summer's neglect. Five months of dry, dusty weeds by the roadside is too big a price for pay for an occasional clump of blossoms in the fall.

Public spirit is aroused in the cities. Immense treasure in money and labor is expended on parks and streets that towns may be good to live in. Can we not cultivate in ourselves and our neighbors a similar civic pride? Let us call the man a benefactor who plants his garden so that it may be a joy to the passer-by as well as to himself. Let us call that man a patriot who cares for the adjacent roadside, who plants trees there, and who, as Elbert Hubbard says, "Makes one blade of grass to grow where jimson weeds grew before."

Politeness.

Good breeding is an accomplishment French people always acquire at home and in childhood; therefore their reputation for being the politest people in the world.

A Frenchman, his wife and a couple of children will observe all the most exquisite social amenities in the privacy of their own vine and fig tree, and the family life presents all the social advantages they require. A French boy of even the humblest parentage does not wait to go out in the world to learn how to offer a woman a chair, give an elderly gentleman his arm, invite you to dine, or discover the topics of conversation that engage your interest. He has lived from his babyhood in an atmosphere of family deference and cheerfully unselfish consideration, and he is charmingly polite by precept and example wherever he may find himself.

Happiness, content and right satisfaction, all doubts answered, all dark places lighted up, heaven begun here—this is the reward of loving God. In this world, tribulation, yes, but good cheer in spite of that.—George Hodges, D. D.

Age of baby, three years. Finding a button off her dress, little Strathie said to his grandfather. "Grandfazzer, me wants a wife to look after my clothes."

"A Kalamazoo Direct to You"

You save from 20% to 40% by buying a Kalamazoo Stove or Range direct from the factory at lowest factory prices. Moreover, you get a stove or range not excelled by any in the world. We guarantee quality under a \$20,000 bank bond.

We Ship On 360 DAYS APPROVAL and We Pay the Freight.

If you do not find the Kalamazoo exactly as represented, the trial does not cost you a cent. It will pay you to investigate.

Send Postal for Catalog No. 189.

All Kalamazos are shipped promptly, blacked, polished and ready for use.

Kalamazoo Stove Co., Mifflin, Kalamazoo, Mich.

All our cook stoves and ranges are fitted with patent oven thermometer which makes baking easy.

The Kansas State Agricultural College

OFFERS courses in Agriculture, Domestic Science, General Science, Mechanical Engineering, Electrical Engineering, Architecture and Veterinary Science. Also short courses in Agriculture, Dairying and Domestic Science. Admission direct from the country schools. A preparatory department is maintained for persons over eighteen. Necessary expenses low. Catalogue free. Address

PRES. E. R. NICHOLS,
BOX 50. MANHATTAN, KANS.

DRAUGHON'S Business College

Ft. Scott, St. Louis, Kansas City, Oklahoma City and Muskogee. 26 colleges in 15 States. POSITIONS secured or money REFUNDED. Also teach BY MAIL. Catalogue will convince you that Draughton's is THE BEST. Call or send for it.

KANSAS ANTI-LIQUOR SOCIETY
We are distributing free to all who write and inclose a stamp, a prescription for the cure of the liquor habit. It can be given secretly in coffee or food. Also a recipe for the cure of the tobacco habit, that can be given secretly. The only request we make is that you do not sell the recipes, but give free copies to your friends. KANSAS ANTI-LIQUOR SOCIETY, Room 77 Gray Bldg., KANSAS CITY, MO.

The Young Folks

THE FELLOW WHO CAN WHISTLE.
The fellow who can whistle when the world is going wrong
Is the fellow who will make the most of life;
No matter what may happen, you will find him brave and strong—
He's the fellow who will conquer in the strife.

The fellow who can whistle when the whole world seems to frown
Is the kind of man to stand the battle's brunt;
He's got the proper metal, and you can not keep him down,
For he's just the sort that's needed at the front.

The fellow who can whistle is the fellow who can work,
With a note of cheer to vanquish plodding care;
His soul is filled with music, and no evil shadows lurk
In his active brain to foster grim despair.

The fellow who can whistle—he is built on nature's plan,
And he cheers his toiling fellow men along;
There is no room for pessimists, but give to us the man
Who can whistle when the world is going wrong.

—Sidney-Warren Mase, in Lippincott's.

Aunt Kate to Katherine.

Chicago, February 7, 1906.

My Dear Niece:—I was invited out to a dinner last week, as I told you. I accepted, and this letter is the direct result of my going.

Who was the wise woman who said, "I can judge the character of a young girl, if I sit down to the same dinner-table with her?" I am not sure that I am prepared to make so sweeping a statement as this, and yet the table manners—be they of the old or young—do indicate the character to some extent.

There were twenty guests present, and we were seated at one long table. It was a delightful dinner and I enjoyed meeting the ladies, most of whom I knew. Among them was a young high-school girl, whom I had heard spoken of as very bright and charming. She was seated just opposite me. Her dress suited her perfectly and she was very pretty.

But my namesake shall not make the mistakes that young girl made, if it is in the power of her aunt to help it. She began by telling a good story and she told it well. Then she told another not so good. That seemed to start her, and she monopolized the conversation at that end of the table. She was the youngest guest present, and it was, to say the least, a lack of tact upon her part.

I was reminded of the answer I heard your small sister Ruth make not long ago, when you asked her why she did not like a certain little girl. "If little girls show off too much, folks get tired of them," she said.

This young girl rested her very pretty bare elbow on the table, as she leaned to talk to the lady next. A moment after I heard her say: "Not olives, thank you. I think them perfectly detestable, and I don't see how anybody can eat them."

Once she reached across her neighbor to secure a salt-shaker, and perhaps she caught the surprise in my eyes; anyway she said, laughing: "You know this is an informal dinner. Mrs. L. said so, when she invited us."

I felt like answering, "Informal does not mean ill bred." And so it went. Without doing anything that was very rude, she did a dozen things that were not good manners at a dinner party—not a dinner at home, for the matter of that.

After I got home, I thought it all out, and I came to this conclusion: Young people—also older people—are not careful enough to use their very best manners three times a day, at their own home tables. And so it is impossible to get into their best manners upon short notice, when invited out to dine. The only safe way, then, is to don one's best manners and keep them on for the people who love us best—those in our own homes. Thoughtfulness of others, tact and politeness at table will then soon become a part of one's self. We will grow to be like the dear old lady whose daughter said to me not long ago, "I can not imagine my mother doing or saying anything unkind or rude. She would not know how."

I remember that you do not like the "don't" lists in a paper; so, my dear, I have not sent you a single "don't"; but perhaps you may discover a few things

to avoid, and my letter will not have failed of its mission.

Your loving

AUNT KATE.

A Hoy's Apiary.

I was a boy when I was master of an apiary, and thirteen when I made my start with a dozen hives. The home was on Lake Champlain, and close by the shore of the lake, and in clover time my father's bees would streak by thousands for the rich fields of Vermont, two miles over the lake. In light breezes or even fairly rough weather they made the passage very well, but Lake Champlain can be mirror-still for days at a time in June, and then the poor honey-seekers could be seen dottling the quiet water by hundreds, many dead, many still struggling, but not one rising after the wetting of her wings. I suppose it was the glare of the still water which confused the little creatures, rather than any weariness, for repeated observation established beyond doubt that if the surface was but slightly rippled, or if the waves were high, the brave voyagers would make their four-mile flight for the tiniest fraction of the contents of one cell of honey, in perfect safety.

Therefore, both for mercy and for profit the apiary was moved a mile and a half back from the lake, the boy of thirteen was placed in charge, and we heard no more of the swarms of dead bees in the water on calm days, and from the basswoods on the craggy sides of Bulwagga Mountain and the clover patches in the scanty farms of "Coote Hill" the descendants of those twelve swarms paid my way in the simple life of a very respectable Vermont college. It is a great thing for a boy to be master of something—or anything. I would rather be Tom Sawyer, the boss of one bedraggled pup of mighty prowess in the imagination of his master, than the son of a man who owned everything in sight, so that his boy could not own anything at all. Thirteen years old—and to see the dozen graceful bee-mansions increase one by one! Twelve colonies, and then your first new swarm, all your own! Thirteen, then two in a day—whoppers, both of them, and it's only May, and Bill Reed, who's been at the business twenty years, hasn't a swarm this year! Fifteen! Sixteen! How they do sing of a warm June night now! Is there any music in all God's earth like the soft roar of the apiary, when every hive "hangs out," and the scent of the ripening nectar makes one extend his nostrils, and breathe, and just breathe? And to be a boy, and to know that in each of those little palaces there is tier on tier of snow-white sections put together by his own hands, filling with the fairest, sweetest honey the earth affords, the nectar of our Northern clover and the basswoods of the hills!—New York Evening Post.

A Dog Which Saves Lives.

Rags is a 4-year-old dog, unkempt and ill looking, but a heroic heart beats in his shaggy breast. Rags has saved more than forty lives. His field of service is the Klondike, where he and his master have wintered for several years. The Philadelphia North American tells of two of the dog's exploits.

In the winter of 1901 a number of men belonging to the Pittsburgh Mining Company were prospecting in Alaska. They lived in a little wooden hut, from which they went out in pairs to explore. They were away beyond any sign of civilization, and the weather was so severe that they endured a good deal of suffering.

One day two of the men, out on an expedition, were caught in a sudden and terrific storm. They started back for camp, but the trail was rapidly covered by the drifting snow. On and on the men plodded, each falling now and again, only to be roused from the death-dealing sleep and hustled on by his companion. At last both sank, and the snow drifted over them.

The men at the camp, alarmed by the non-appearance of their comrades, started out to rescue them. Rags went along, too. Straight as an arrow he followed the trail, and before long a sharp yell told the party that their friends had been found. The two men were completely buried in the snow, and help had not come one moment too soon. This was Rag's first exploit.

At another time he went out as the leader of sixteen dogs which were dragging a rescue team to relieve a party of snow-bound miners. As the team was plodding steadily along, Rags suddenly gave a cry, broke from the traces and bounded away. Thinking he might have found the trail, the party followed, and by the time they had reached him, Rags had dug away

the snow to allow an entombed miner to crawl out.

Enough snow to allow an entombed miner to crawl out.

Rags has saved forty-six lives and made several record-breaking rescue trips. His badge of honor is a gold collar on which is inscribed a list of his deeds.—Ex.

Home Made

Have your cake, muffins, and tea biscuit home-made. They will be fresher, cleaner, more tasty and wholesome.

Royal Baking Powder helps the housewife to produce at home, quickly and economically, fine and tasty cake, the raised hot-biscuit, puddings, the frosted layer-cake, crisp cookies, crullers, crusts and muffins, with which the ready-made food found at the bake-shop or grocery does not compare.

Royal is the greatest of bake-day helps.

ROYAL BAKING POWDER CO., NEW YORK.

The Little Ones

A DOMESTIC TRAGEDY.

My doll, my doll, my Annabel!
She's really feeling far from well—
Her wig is gone, her eyes are out,
Her legs were left somewhere about,
Her arms were stolen by the pup,
The hens ate all her sawdust up;
So all that's really left of her
Is just her clothes and character!

—Lucy Fitch Perkins.

A Brave Bird.

"Another story!" exclaimed Aunt Julia, as little Eleanor climbed into her lap and laid her curly head contentedly on her aunty's shoulder. "Well, this is the fourth story you have had to-day, so this time it must be a really, truly story, and it happened last year in a pretty little town down East, where your Uncle Charles and I were spending the summer.

"I was sitting on the piazza with my sewing, and your uncle was reading, when all at once the dearest little gray bird, with pale yellow spots on its wings and tail, flew down on the piazza and hopped round in a very friendly way. A few moments later I went into the house to get my scissors, and while there your uncle called to me to look out of the window. There was the dear little bird up on the table, pulling at my work and trying to fly off with it.

"I brought out some ravelings of cloth, bits of cotton wool and thread, and laid them near my work on the table. Very soon down came birdie again, and seemed delighted to find so many nice bits for the nest.

"All that day she flew back and forth with the pieces of string, wool and cotton, often lighting on my chair, and seeming not one bit afraid. The next day she came again, getting better and better acquainted each time, until she hopped into my lap, pecking at my work and picking up any loose threads she could find, and carrying them off to her nest in the tree near by.

"The third day some friends came over to see our new pet, and to watch her, busy at her task of nest-building.

"For a long time after they came birdie watched them from her perch in the tree, but did not offer to fly down near us, and we feared we had frightened her away; but in a little while down she came again, flying on the table, and then into the lap of one of the ladies sitting near.

"Off she went again with the scraps of wool she found there, then back again, perching on the shoulder of a little girl, and pecking at her hair rib-

THE Cheapest Farm Lands

In the United States today, soil, climate, markets, transportation facilities, and all considered.

ARE SOUTHERN LANDS.

They are the best and most desirable in the country for the truck and fruit grower, the stock raiser, the dairyman and general farmer. Let us tell you more about them. The Southern Field and other publications upon request.

Farmer's Account Book and Ledger

Saves time and labor—a few minutes each day will keep it; systematizes farm accounts in every department; shows in the simplest manner how to increase profits and decrease losses; endorsed by farmers everywhere. We stand ready to refund the purchase price on every book not found satisfactory. We deliver this book postpaid, including the Kansas Farmer one year, both for only \$2.50. Address,

KANSAS FARMER CO.,
Topeka, Kans.

bon, evidently thinking it would make a fine, soft lining for her nest.

"Next she lighted on Uncle Charles' arm, and tried to pull his handkerchief out of his pocket. We wanted very much to laugh at the dear little thing, she was so cunning and amusing, but we kept very quiet, fearing we should frighten her away."

"She hopped about the piazza for some time, then finally flew back to her nest, which by this time I think must have been finished, for although we often saw her flying about near the house, she never came on to the piazza again."—Mary W. Carpenter in Youth's Companion.

MISCELLANEOUS PROGRAM.

Art and Life.

I. Art in relation to life.
II. The preservation of art—and civilization.

III. The influence of art upon character.

I. Art means anything produced by the mind and hand of man, and includes fine art, the industrial or liberal arts, and is so closely associated with life that they can not be thought of separately. This is a broad subject and may be profitable to the writer of this paper and to the hearer. It may be made very practicable and applied to everyday life.

II. This subject may be used in a broad way by giving a brief history of the growth and development of the arts—both fine and industrial—showing the progress of the same with the march of civilization as they have gone hand in hand together.

III. Art is a beautiful language that speaks to the soul of man and yields an influence for good or evil. Some thoughts and ideas are better expressed in that way than any other. The importance of the artistic home surroundings, and their effect upon the children might be presented in such a way as to be practicable and helpful.

Possibilities of the Club.

While the club is a benefit to the woman by making her healthier, wiser, and better, it may also be a means of accomplishing great things in a community. No true woman, or number of women can long enjoy the blessings which it brings without a desire for the betterment of somebody else. An organization of women can do much to improve the morals and manners of the young by elevating the standard of living.

The possibilities of the club for the improvement of the neighborhood are many. In this respect I refer you to the article in this issue of the Kansas Farmer on "The Familiar Features by the Roadside," which reveals some of the needs. By concerted action on the part of a body of energetic, in-earnest women they can do wonders.

If each farmer sees to it that his own premises and wayside is well-kept, and that no unsightly advertisements are allowed on them, that the profitable but

objectionable hog be relegated to an obscure, out-of-the-way place, and unsightly places be covered by evergreens how long will it take to transform the appearance of a locality? And this can be done by agitation at home and in the club. Woman is often the motive power in the world of action and many great achievements are due to her influence and advice.

[The following, by Mrs. Winslow in the Delineator, will apply to the country as well as to town.]

The fact is that club women have come to realize how much may be done for the Nation by beginning right in their own kitchens. The farmer who succeeds nowadays gives a great deal of time and study to the feeding of his flocks and herds. He would not expect to make a success, for instance, of chicken-raising unless he fed his hens properly with good, nourishing food. Shall the housekeeper do less? Every club should devote at least one meeting a year to the kitchen, its location, furnishing and care. Another meeting should be devoted to the study of proper foods; and here would come in some exhaustive work on the pure-food question. The intelligent club woman has found that many things must come into consideration in planning the meals of her household. She has the problem of making the tastes of her family and the limitations of her purse correspond to the science of nutrition and economy. She must learn to adapt the food of the family to that intricate machine, the human body, and to provide for it such fare as will give energy and life with as little waste and as little friction as possible. The "simple life" has been talked to a tiresome end, but a more simple home-life is what every housekeeper should aim for. Clean homes and pure food constitute a problem that comes close to the club woman's heart, and in every town the woman's club which is up-to-date is taking the lead in studying it. It would be an excellent thing for the home as well as for the club question if all through the country the clubs would make an exhibit next spring of the best foods. Dietary standards, pure food and similar topics should all be illustrated; and the exhibit should be thrown open to the public, thus not only educating the immediate locality, but proving the practical benefit a club may be to a town.

TESTED RECEIPTS.

Lizzie's Cookies.

1½ cups sugar, 1 cup butter (small), ½ cup molasses, 3 eggs, 1 teaspoon soda, 1 cup raisins, 1 cup currants, 1 teaspoon ginger, 1 teaspoon cinnamon, 1 teaspoon allspice, sufficient flour to roll out as soft as can be cut.—Mrs. W. A. Taylor, Sterling.

Fruit Cake.

1 cup butter, 2 cups sugar, 1 cup sour milk, 4 eggs, heaping teaspoon soda, 2 pounds raisins, 1 pound currants, ¼ pound citrons, 2 oranges, 1 lemon, 1 cup New Orleans molasses, teaspoon nutmeg, 1 teaspoon cinnamon, 1 teaspoon cloves, flour to make it rather stiff. Bake slowly for two hours. A few dates and figs improve it.—Mrs. W. A. Taylor.

Fruit Salad.

1 pint nice mellow apples, cut in dice shape, 1 pint celery, 1 cup English walnuts. Dressing for the above—yolks of 2 eggs, 8 tablespoons butter, sugar, red pepper to taste, pinch of salt, vinegar to taste, whipped cream. Have tried this and I know 'tis fine.

Ginger Bread.

½ cup sugar, ½ cup butter, 1 cup molasses, cup boiling water, 2½ cups of flour before sifted, 2 eggs, 2 teaspoons soda, teaspoon ginger, a pinch of salt.—Mathilda Johnson, Santa Clara, Cal.

Cream Omelet.

Put a tablespoon of butter and a tablespoon of flour together into a saucepan, blending together as the butter melts, then add gradually a half cup of milk, and season with salt and pepper. When thick take it from the fire and let it cool, while you beat the yolks of 2 eggs which add slowly to cream sauce, and lastly fold in lightly the whites whipped until stiff. Have some melted butter in your hot pan, pour in the mixture and cook on top of a hot stove about two minutes or till stiff; then set in the oven a minute

SIMPSON-EDDYSTONE Black & Whites

TOPEKA BUSINESS COLLEGE, Topeka, Kans.

till the top is a dainty brown. Fold over and send to table immediately.—Katharine Lawrence, an Instructor in Cooking, Philadelphia.

Good Cookies.

Two cups white sugar, 2 cups lard, 2 eggs, 2 tablespoons ammonia dissolved in 1 pint sweet milk; flavor to suit taste.—Mrs. M. R. Hanenkratt, Tillamook, Ore.

Escalloped Salmon.

Take a can of salmon and mash it up, then butter your bake-dish, put in a layer of crackers, then salmon and then crackers and so on until you use all your salmon; salt, pepper and dot with butter and pour on enough milk to moisten the crackers and bake until a nice brown.—Mrs. Myra Bowker, Connellsville, Pa.

Baked Apples.

Peel and quarter enough apples to cover bottom of bake pan, have ready a dressing of ½ cup of sugar, 1½ tablespoons cornstarch, butter size of walnut, pint boiling water; stir and boil until thick, flavor with vanilla and pour over apples and bake.—Mrs. Myra Bowker, Connellsville, Pa.

Ginger Cake.

Put 2 cups baking molasses in a bowl, stir in it 1 cup melted lard, 2 teaspoons soda, 2 of ginger, 1 of salt, 1 cup hot water; stir all well and add enough flour to make a soft dough; roll out and bake.—Mrs. Myra Bowker, Connellsville, Pa.

Wanted It to Drop.

A belated traveler asked for a room at a hotel, and was told there was only a small one left and it was next that of a regular boarder, who was a nervous crank, who raised Cain if he was disturbed. He was cautioned to be quiet as possible on retiring, and promised to do his best. He entered the room, closed the door without making a sound and proceeded to disrobe. He got along fine until removing his boots, when one slipped inadvertently from his hand and fell with a sickening thud on the floor. He waited a moment to note the result, but apparently his neighbor was undisturbed, as there was not a sound. He had retired quite a few minutes, and was just dozing off when there came an awful pounding at his door.

"Hello! what's the matter?" he cried out.

From the other side of the door came in irritable, testy tones, "Confound you! Why don't you let that other boot drop? I have been waiting twenty minutes for it."

Give and Take.

The other day the head of a boarding-school noticed one of the boys wiping his knife on the table-cloth, and pounced on him at once.

"Is that what you do at home?" he asked indignantly.

"Oh, no," answered the boy quickly, "we have clean knives."—Lippincott's.

MACHINE OIL

\$3.50 A BARREL

You will find it a better machine oil than anything you have been buying for 35 cents to 45 cents per gallon. Premium Oil is a natural oil, greenish black in color. There is no made oil that is superior to Premium Oil for engines, shafting, shops, elevators, thrashing machines and farm machinery. It will not GUM, has good body, is not affected by hot and cold weather as most oils are. If a farmer, you say you won't need as much as a barrel. Get your neighbor to take half of it. But remember \$3.50 for a 50-gallon barrel, and the empty barrel is worth at least one dollar; gives you oil at less than 6 cents per gallon at your railroad station. If within 300 miles in Kansas freight will not be over 75 cents per barrel. Sample sent on request.

*Imports for consumption.

A little study of this table shows that the importing business is only from one-tenth to one-eighth as extensive as it was twenty years ago. At the present time, more horses are imported than cattle, but for the five-year period 1899-1903, more sheep were imported than horses, but the number was continually decreasing. For this period, the average annual importation was cattle 1,265, horses 2,002, sheep 2,120, swine 156. For the year 1904, the number of cattle, horses and sheep imported was, cattle 684, horses 2,634, sheep 1,253, swine 191, and for 1905, cattle 2,314, horses 2,853, sheep 2,200. The largest number of horses come from France, with British North America second, and the United Kingdom third. The largest number of cattle and sheep come from British North America, with the United Kingdom second. Swine importations have not been reported by countries.

There appears to be a difference here between the condition in the horse importing trade at the present time and that of other animals. Comparing the five-year period 1899-1903 with the one immediately preceding it, it will be seen that there was an average annual decrease of more than half in cattle and a slight decrease in sheep, but an increase of nearly twice as much in horses. The increase in horse importations has since been maintained and cattle and sheep showed a decrease in 1904, but an increase in 1905, not yet equalling horses, however.

are better for our conditions than the best that is imported, and it will not be long before the same can be said of the Shorthorn, Aberdeen-Angus, Galloway, and other breeds.

The Stallion Trade.

Although the figures do not show it, the great majority of the horses imported for breeding-purposes from across the seas are drafters. This trade from Europe, although bringing us the best horses imported, is the one American breeders have most cause to fear.

Now we have been importing draft-horses from Europe for at least thirty years in large numbers, but the first notable importation dates back to the coming of old Louis Napoleon in 1851. Theoretically, I presume, the same conditions hold here as for the importation of other classes of stock, but, practically speaking, instead of being developed so as to establish the breeds rapidly in the United States, the business has become a stallion trade, handled by men "who rarely breed, own, or import a female."

I am fully aware that this rapidly developed trade really dates back but eight years, that it is due largely to the present tremendous local demand for draft-horses for business-purposes, and that the work that was accomplished before the financial depression of 1893-97 was almost destroyed by the stampede of farmers at that time to get rid of their mares, but, gentlemen, "the

present system is an anomaly." The country must have drafters, and to get them we can not always rely on foreign-bred stallions. We must have mares. We must breed our own stallions.

Undoubtedly the draft-horse business confronted a peculiar situation when it began to revive in 1897. An emergency was to be met and met quickly. A supply of breeding stallions had to be obtained and a trade developed. But let me ask you candidly, has this trade been developed along the right lines? If we sold our draft-mares during the depression, would not the logical proceeding have been to import more mares than stallions so as to establish a supply of stallions of our own breeding?

I have prepared a little table showing the number of horses imported from France, the United Kingdom, Belgium, and Germany since the year the trade reached its lowest ebb, 1897.

TABLE II.

Horses Imported into the United States for Breeding Purposes, from France, the United Kingdom, Belgium, and Germany, for the Years 1897 to 1904, Inclusive.

Average value.	485.45	638.19	458.51	364.57

Here are about 2,000 horses coming to us annually from four countries, probably three-fourths of which are stallions. Compared with that for cattle and sheep, this trade bears a much more important relation to the horse industry of the country than the figures indicate, on account of the fact that horses are fewer in number and the registered and pure-bred horses, particularly, smaller. It is worthy of consideration how long this trade will continue and where it will end. The farms of France have been drawn upon until the breeders there are becoming anxious for the permanence of their studs, and importers are turning to Belgium as these figures and our stock shows bear witness. In the European breeding establishment the importer has found a goose which lays a golden egg. Is he not systematically killing it?

Inequalities in Registration Methods.

The large preponderance of stallions in this trade is not the only serious condition. The studbooks of the United States are generally closed to horses whose sires and dams are not registered in the stud-books of America or those of Europe. Now, if the standards of registration were the same in both cases, no one could complain; it would be a straight case of competition, with open chances to all. The European stud-books, however, especially those on the continent, do not regard pedigree of the same importance as we do here. The individuality of a horse, rather than his breeding, decides whether he shall be registered, this usually being passed upon by a board of inspectors. Now this inspection system has much in it that is commendable, and our stud-books might adopt modifications of it to advantage. If horses must pass a rigid inspection before being admitted to registry, the result on the breed will be the same as the result on an army of a rigid physical examination of recruits. The practical workings of the system, however, make possible the registration of horses concerning whose breeding there is little accurate information, and it is easy to see the disadvantage under which an American breeder works when he tries to sell his horses in competition with them. The Government provides a certain amount of protection against these horses by requiring the pedigree certificates of imported animals to show not less than two generations of descent from registered ancestors, but it is only within the past two years that the importation of horses has been stopped whose pedigrees were short on the dam's side in the second generation; the second dam showed what ap-

peared to be a bona fide registration and the certificate passed the Custom officers without detection, but reference to the stud-book showed that the data were taken from the registration of the first dam and that nothing was really known of the maternal descent beyond this point, except the name and owner of the second dam, and, occasionally, her sire. The evasion was explained to the Treasury Department and is now impossible. In other words, up to two years ago, two-top crosses were coming in duty-free and being sold in competition with home-bred stock, which never has been eligible on less than a five-top cross; and now a horse with a three-top cross can enter without restriction. Now let us be perfectly candid and frank. The fact that a three-top cross can enter our ports free, seems to indicate at first sight that the Government is not doing its duty towards American breeders; but if the Government were to revise the

horses by the methods of the confidence man or the agent for fruit-trees and lightning rods. It is reassuring that only a small number of the horsemen of the country are in this class, but it is a matter of regret that some of them are not only importers but pose as breeders as well. That they are able to do business at all is due to their shrewdness and consummate nerve, the credulity of the public, and the difficulty to convict men in the courts of fraudulent pedigree manipulation.

These men generally use the "company" system of selling horses as the most convenient means to dispose of their stock. Now the company system is an institution and is pretty well fixed. Practically all draft-horse handlers use it, but a great many do so not from choice but from compulsion. You are probably far more familiar with it than I. You know the wiles of the agent and his plausible arguments. A common plan is for an agent to go into a community and get a leading farmer to assist him in the organization of a company for the consideration of a share of stock. The shares are represented by negotiable notes, which are discounted at the bank when the company is finally organized, and the bank collects. The price paid for the horse must include, besides the profit to the owner, the expenses and commission of the agent and the discount on the notes. At its best, the system is expensive; purchase direct from the firm would give a price three-fourths or one-half that paid under the company plan. Generally speaking, however, the system gives almost unlimited opportunities for fraud, for this reason: Under the law, a firm is responsible for the acts of its agent only when he acts within the limits of his authority. Therefore an unscrupulous agent for an unscrupulous stallion-owner can promise and represent almost anything to bring about a sale, and if fraud is perpetrated, the purchaser has no recourse. The agent is a migratory being, and hard to catch, while the employer puts on a sanctimonious air and retires behind the excuse that his agent "exceeded his authority." Most of these agents are loyal, and loyalty is a term capable of a very wide range of definition. Their profits depend upon their ability to make sales, and the results of the system are not really surprising. Even an honest firm may have dishonest agents and in their desire to extend business, may condone the actions of an agent if he is a hustler and loyal, and in the event of an agent exceeding his authority, the employer's temptation to avoid his moral obligation is certainly great.

It is gratifying to note that many horsemen condemn this system without mercy, even though they may use it. As long as horses must be sold and competition is keen, and the buyers will not seek the sellers, the system will probably prevail. It is one of the regrettable features of the speculative side of the horse business, and the only chance for its end lies in the hope that the public will become educated to its wastefulness and its possibilities for fraud.

This subject can not be passed without mention of the possibilities of the studbook associations to eliminate dishonesty from the horse business of the country. These organizations constitute the backbone of the industry. As a rule, they have honest boards of directors and honest officers, and are managed competently. They possess a power greater even than that of the law to check the machinations of dishonest importers and breeders. By ostracizing men who continually persist in crooked work, and by the adoption of improved methods of studbook publication, they can put the business on the highest plane.

Time will not permit an elaborate discussion of this phase of the subject, but among the features whose adoption would be desirable, are the publication of a studbook volume annually, rules requiring the report of all deaths and transfers, and the publication in the studbooks of the progeny record of mares and stallions. Some of these features have already been tried without success, but they have much of merit and should not be discarded lightly.

Suggestions Regarding Future Government Policy.

In conclusion let us consider briefly how far the present policy of the Government regarding the importation of horses for breeding-purposes is responsible for these conditions, and whether there is any possibility that changes in this policy may tend to remedy them. There seems little reason to believe that we will ever depart from the idea that the object of our policy should be the establishment of the breeds as soon

regulations so that the conditions would be more nearly equal, and were to require more than two generations of registered ancestors, or require certified foreign stud-books to close their books to "woods-bred" stock, importations would stop at once. Importers are agreed that in many cases the present regulations act as a positive hardship towards them. They are frequently compelled to pass by some of the best horses presented for sale, because their pedigrees are short in the second generation. Yet these horses are of outstanding merit and good judges say that they could often be imported to advantage. It may be that the European system of registration is more efficient than ours, but at all events, there is a condition here which can not be passed by lightly. We are not yet able to dispense with importations but a more equitable adjustment would seem to be desirable if practicable.

Speculation in Horse Imports.

The presence of the speculator in the horse-importing business is one that is worthy the most serious consideration. Excepting his predilection towards stallions, I have no criticism to make against the honest importer who buys the best horses obtainable and conscientiously strives to give value received. He deserves praise for his energy, good business methods, and farsightedness, but the man is beneath contempt who is in the business solely for the money he can get out of it, who buys without regard to individual merit, soundness, or pedigree, and sells his

250 Atchison, Brown and Jefferson County farms for sale at reasonable prices. Write me for full information.

Wm. Dunkel, agent, Muscotah, Kans.

FINE STOCK FARM FOR SALE—640 acres, one-half in cultivation, balance in pasture, mostly seeded to Kentucky blue-grass, well watered, about 40 acres in alfalfa, all fenced and cross fenced, beautiful lawn with shade, large eight-room house, commodious barns for stock and hay, fuel, poultry, and ice houses and other outbuildings, feed yards, corrals, stock sheds, one tenant house; convenient to church and school, on Rural route; 1½ miles from station on double track railway, 12 miles east of Topeka, the State capital, 54 miles west of Kansas City, in the midst of a splendid farming country. It is now occupied by the owner, who has lived there for more than thirty years. Price, \$37.50 per acre. Easy terms. Address **WILSON & NEISWANGER,** 116 W. 6th St., Topeka, Kans.

I am very well pleased with the press as it works fast, is easy on the team and the hales are perfect. J. H. Foltz, Wakarusa, Kans.

Satisfaction guaranteed. Manufactured by the AUTO FEDAN HAY PRESS CO., 1064 Jefferson St., Topeka, Kansas.

as possible on our soil or their adaptation to our conditions.

Many breeders, however, believe that the present tariff laws act as a positive discrimination against American-bred stock, and this sentiment has found voice in a more or less tangible desire for the withdrawal of the duty-free privilege. Some breeders urge that if the regular duty were imposed, more care would be exercised in buying and only the best could be imported. This idea was expressed officially by the American Shorthorn Breeders' Association when it imposed a registration fee of \$100 on all animals imported from foreign countries, except those from Canada. The rule met with violent opposition at the time of its passage, but its operation has shown that it is a wise rule and its repeal is unlikely.

The complete withdrawal of the duty-free privilege, without the present restrictions regarding pedigree and registration, would be undesirable, for the reason that short-bred animals recorded in European books of record would not be kept out. As it is at present, the importer does not bring in such animals, the duty preventing him, although he could do so if he wished by paying the duty and thus avoiding the scrutiny of his pedigree certificates.

A more reasonable plan which has much of merit, is that a duty be placed on males, the importation of females of approved pedigree being permitted without duty. This would give a very desirable impetus to the importation of mares. If this plan were adopted, it would seem desirable to require the importer to state whether his animals were intended for breeding purposes, and to have the present pedigree restrictions apply to breeding males as well as females.

A further restriction that has been suggested is to have all mares and stallions imported inspected by veterinarians for unsoundness, and refused admission if found unsound. There is little doubt that many unsound horses are imported, but the Government has no authority to reject them, the law requiring sanitary inspection only.

That there is a necessity for the establishment of the breeds of horses in this country, especially drafters, no one can doubt, and its possibility seems equally evident. It requires more than skill at a horse trade; it demands knowledge of pedigrees, heredity, and faith in one's self and in horse-flesh. The problems that confront the horsemen of the country must be solved, and one can not doubt that they will be. Sentiment must play a minor part; we must buy the best where we can find it, use it intelligently, and await results. A splendid opportunity exists here for the constructive breeder, the man who will apply ability, perseverance, and courage to the problem.

DISCUSSION.

President Potter: I think, gentlemen, you have listened to one of the greatest lessons this morning that we have had presented.

Mr. Avery: This duty on animals is a question I have personally known to have come up before the Percheron Society of America, and it has a number of very strong advocates in the membership and members of board of directors of that association. Twenty per cent ad valorem on the average cost of the horse would not by any means bar good horses from coming. I would like to ask the gentlemen what beginning is necessary to have this restored?

Mr. Rommell: I think that was brought out in the paper. The law that governs these cases is the tariff law. This law that governs now is an amendment to that act that was passed on March 3, 1903. That was passed on account of a ruling of the general appraisers that animals imported for sale would be dutiable. Now, if the breeders of the country want to amend anything of that kind, Congress is the body to go to.

Mr. Terry: I would like to ask the Professor if he can give us the laws and rules covering the French inspection.

Mr. Rommell: Before he is exported?

Mr. Terry: Can you give us the laws and rules governing the inspection in France?

Mr. Rommell: No, I can not. I do not think there are any laws in France for governing the exportation of horses. I do not think there are any particular laws except that an animal must pass a board of inspectors that are supposed to be competent to judge.

Mr. Robison: I would like to hear from you in regard to what you think of Government supervision of registry books, the same as they have in other countries.

Mr. Rommell: Well, we have got more than some have.

Mr. Robison: What is the advisability

ity of Government control and inspection of registry books?

Mr. Rommell: Well, we have that already to a certain extent. The order that I referred to requires reports every year from associations. When a volume of their herd books comes out we go over it pretty carefully, and any laxity or crookedness it seems to me would appear from that inspection. That order has not been in effect quite long enough for one to say how it will work out, but at the present time it seems that it will have a satisfactory effect and that it will be useful. It was published on October 4, 1904. It is working very nicely at the present time. The first of November this year will be a rather crucial point for the reason that that is put as the time limit for a certified association to publish a volume of its record. You will be surprised to learn that there are some who have been in business in this country ten or fifteen years who have never published a book of record. We require the publication of a volume once in four years.

Mr. Avery: Isn't that a long period?

Mr. Rommell: Yes, sir; very much too long. By establishing the four-year period the department thought it was establishing a period no one could object to because it was too strict. It seems to me that an association that is doing business ought to publish a volume every year.

Mr. Avery: I would like to ask the Professor what he believes of Government system of pensioning sires. As a matter of fact, some pension is practised in every country from which we are now importing our best sires.

Mr. Rommell: You mean subsidy, rather than pension. I am inclined to doubt the constitutionality of a plan of this kind, for this reason, that the

Dollar Package FREE Man Medicine Free

You can now obtain a large dollar size free package of Man Medicine—free on request.

Man Medicine cures man-weakness.

Man Medicine gives you once more the gusto, the joyful satisfaction, the pulse and throb of physical pleasure, the keen sense of man-sensation, the luxury of life, body-power and body-comfort—free. Man Medicine does it.

Man Medicine cures man-weakness, nervous debility, early decay, discouraged manhood, functional failure, vital weakness, brain fag, backache, prostatitis, kidney trouble and nervousness.

You can cure yourself at home by Man Medicine, and the full size dollar package will be delivered to you free, plain wrapper, sealed, with full directions how to use it. The full size dollar package free, no payments of any kind, no receipts, no promises, no papers to sign. It is free.

All we want to know is that you are not sending for it out of idle curiosity, but that you want to be well, and become your strong natural self once more. Man Medicine will do what you want it to do; make you a real man, man-like, man-powerful.

Your name and address will bring it; all you have to do is to send and get it. We send it free to every discouraged one of the man sex. Interstate Remedy Co., 1468 Luck Bldg., Detroit, Mich.

invested in a package of

Uneeda Biscuit

teaches you many truths:

That soda crackers are the best of all food made from flour.

That Uneeda Biscuit are by far the best of all soda crackers.

That Uneeda Biscuit are always fresh, always crisp, always nutritious.

NATIONAL BISCUIT COMPANY

WE WANT NAMES

We want YOU to send us the names and addresses of from ten to twenty-five farmers living in the United States, each one having five cows or more. You can send us the names from any number of different post-offices. If you will send us these names we will send you FOUR BEAUTIFUL PICTURES FREE. These pictures are reproductions of the most celebrated paintings in the world, and they are of high quality, and we know that you will be pleased and delighted with them; no pictures will be given for a list of less than ten farmers.

We want to send a sample copy of the special dairy edition of the RURAL HOME to a lot of farmers who are not now taking our paper and that is the reason we want these names.

Send us immediately a list of at least ten farmers and we will send you, ABSOLUTELY FREE, FOUR REPRODUCTIONS OF THE WORLD'S FAMOUS PICTURES. Address THE RURAL HOME, 20 North Williams St., New York, N. Y.

National Government has power over everything that affects interstate commerce. As a general rule, stallions are doing business within a State, and I doubt whether that thing would hold. I agree with you that the proposition works well in Europe. It seems to me that it is something that ought to be tried. The States themselves have much more power, and they could handle the proposition more economically than the Federal Government could.

J. W. Robison: The question has been asked, What regulation or what inspection is required in France before a horse can leave that country? The inspection there, if it is carried out in a rigid form, is ample and sufficient.

No horse can leave the commune where he is bred and owned and raised without a certificate of health.

That is well, but when he gets to the point of exportation—Havre being the principal point—he is again inspected by the French State Veterinarian, and he must be sound and reasonably free from disease.

Now, the registry books—we surely should have reform. We should have less registry books and better,

more accurate and more truth in them,

and the regulation that they should be published at least every four years is a very reasonable one.

President Bohrer, of the Bee-Keepers' Association, was introduced, and gave an interesting and instructive talk on bee culture.

N. H. Gentry, of Sedalia, Mo., who was on Tuesday's program, but was not present at that time, was called for.

Mr. Gentry: I was on the program yesterday, I understand—the swine program.

Mr. Heath did not state in his introduction what he wanted me to talk to you about. I suppose, though, about the State fair. I am not at present connected with the State Fair of Missouri. I was on the State Board of Agriculture when the fair was started.

The first thing was we had to pass an act authorizing a State fair, and a location. The location of it was trusted in the hands of a State Board of Agriculture.

We received bids first from different localities in the way of contribution in the way of land.

That of course was taken into consideration. I want to say I was in favor of locating the fair at Kansas City. Kansas City made no bid. Unfortunately the time was short.

We located the fair at the largest point that made a bid for the fair.

We have a good location there,

and I think in time we will build up a big fair.

Special attention given to stock-breeders accounts.

Reference furnished on application.

Mr. Gentry was asked to make a few remarks more in line with his original subject "Breeding the Winners."

I appreciate that the Berkshire hog has given me somewhat of a reputation. A good deal could be said on this subject, and with it would necessarily go not only breeding the winner but development of it. There has been many a prize-winner bred that has never been heard of because it was not developed right. There is just as much in development as there is in breeding, and you receive only as you develop with intelligence. Plenty of men that are good enough judges, that are capable of selecting good stock, yet they fall down when they develop. Be quick to see when things are going wrong. Do not show so much interest in something else that you can not see to your stock.

Mr. Dietrich, of the Illinois Agricultural College, was introduced by the secretary.

Mr. Dietrich: I can not say anything additional to what Mr. Gentry has said. It is a subject that is very important.

It is being followed up all along from the beginning; not only the beginning of the animal but from generations back. You can not expect any animal to breed anything better than himself, that is, the average of the offspring will usually be the same as the parent stock.

Occasionally you may have one that is better. Very often you have one that is poorer. The chances are you will get one out of a hundred which will be a prize-winner.

After you have produced the prize-winner in the way of breeding it depends on the way he is fed. You may take the best animal that was ever bred, and if you do not feed him properly you can never make a prize-winner out of him.

Mr. Gentry: On this State fair question there is this: My advice is to run a clean fair; a fair the surroundings of which will not be degrading the farmers of the State. Let it be a clean place, free from vice. Not only that, I have never been in love with the side show. There is no more place at a

Horticulture

The Ideal Horticulturist.

EDWIN SNYDER BEFORE THE KANSAS STATE HORTICULTURAL SOCIETY.

He doesn't live—he never lived. Adam was probably a very good man in his way. They say he had a nice garden; but he was a sort of a "hand-me-down, ready-made horticulturist." If he had known enough to have killed the serpent and disciplined Eve a little, he might not have lost the title to his real estate. As a horticulturist, he should have had an easy time. No codling moth or canker-worm or tent caterpillar or San Jose scale or other pestiferous insects to pester and annoy; and no scab or blight or fungus disease to spray for; no commissioners to quarrel with, because of unsatisfactory sales; and no railroads or express companies to absorb the profits of the business with exorbitant charges. It must have been that in some way he was a poor tenant, or he never would have been served with that writ of ejection.

I never took much stock in the forbidden-fruit business; and yet, I must admit that ever since Adam's time, what is forbidden by law, human or Divine, seems to have a great fascination for the sons and daughters of men.

The boy frequents the "swimmin'" hole in spite of the maternal injunction not to; and some grown men find a peculiar fascination, if little profit, in violating the Kansas prohibitory law. I have often wished Adam had behaved himself, so that we might not have inherited his disagreeable traits; and had he been an ideal horticulturist, he surely would.

The ideal horticulturist is an absolutely honest man. He is a worker—a persistent, steady worker. He deals with nature, and nature is profoundly imbued with integrity; is implacably hostile to untruth and sham; so inflexible in giving so much for so much and yielding no more to whatever of cajoling or wheedling, that the horticulturist, as a worker, is absolutely constrained to honesty. He may be tempted to cheat in trade; to put the best berries on top; to face the package with superior fruit, and fill up with an inferior article. But he knows better than to attempt to defraud nature; for he knows that every crate of berries or box or barrel of apples cost so much of mental and physical effort and can be secured by no less.

I am glad the horticulturist is compelled to work. I have unbounded faith in the beneficence of labor as a foundation for human education and discipline. Upon this subject the great essayist, Channing, said: "Man owes his growth, his energy chiefly to the striving of the will, that conflict with difficulty, which we call effort." Easy, pleasant work does not make robust minds; does not give men a consciousness of their powers; does not train them to endurance, to perseverance, to steady force of will, that force without which all other acquisitions avail nothing. Manual labor is a school in which we are placed to get energy of purpose and character; a vastly more important endowment than all the learning of all other schools. They are placed indeed under hard masters, physical suffering and want, the power of fearful elements and the vicissitudes of all human things. But these stern teachers do a work that no compassionate, indulgent friend can do for us, and true wisdom will bless Providence for their sharp ministry.

"The material world does much for the mind, by its order and beauty; but it does much more for the mind by the pain which it inflicts; by its obstinate resistance which nothing but patient toil can overcome; by its vast forces, which nothing but unremitting skill and effort can turn to our use; by its perils, which demand continual vigilance and by its tendency to decay. I believe that difficulties are more important to the hu-

man mind than what we call helps. Work we all must if we mean to bring out and perfect our nature. No business which does not present obstacles, tasking to the full the intellect and the will, is worthy of a man."

Measured by the obstacles and difficulties he must overcome to be successful in his calling, the horticulturist must be possessed of about all the graces and virtues. The ideal horticulturist is not afraid of work. He shrinks at no problem the science of horticulture may present. No theory of the enthusiast however plausible is accepted by him without first passing the ordeal of actual experience.

The glib agent appears with the device of a lamp and a pan of coal-oil to catch the codling moth by night. The horticulturist is from Missouri and must be shown. When the unfortunate nursery agent presents to him the plausible but fallacious theory of the superiority of the whole-root grafts over the piece-root and asks him to invest, he is likely to invite the gentleman to "go hence" or to "get thee behind me," or make some similar remark that may be easily comprehended. They say a sucker is born every minute and one dies as often. The ideal horticulturist will never be accused of being in this class. One of his characteristics is, "He is not afraid of manual labor." He is not specially anxious to live by the sweat of some other man's brow. He believes in the dignity of labor, in its beneficent, elevating influence upon the laborer. He insists upon honest, efficient work by his employees and cheerfully sets them the example when necessary. The theory of working eight hours, loafing eight hours and sleeping eight hours, finds no sympathy with him. Better overburdened than not burdened at all, better wear out than rust out. Better, a thousand times better, not only for the man himself, but for society as well, that a man should work himself to death rather than shirk himself to death. The ranks of able-bodied pauperism and crime are constantly being recruited from the idle and unemployed; not voluntarily idle perhaps, but because they have not been taught in youth, any useful work or trained to systematic habits of industry.

The ideal horticulturist is a public benefactor in that he would change all this by keeping the youth of the land of both sexes skilled in his line of work and at the same time pay them a reasonable compensation for their services. The wisest and most beneficent philanthropy is that which teaches the otherwise idle youth to be self-helpful and inculcates habits of industry and thrift. The ideal horticulturist must possess the homely virtues, "pluck" or "grit" without which all efforts and the best-laid plans are liable at any time to fall flat. "Pluck wins, it always wins." The "days are dark and nights go slow, 'twixt days that come and go." Still pluck wins.

"Its average is sure. He gains the most who can the most endure; Who faces issues, who never shirks, Who waits and watches and always works."

Well, I have waited for an apple crop for three weary years, and have watched an abundant promise and profusion of blooms, under the blighting influence of the east winds, cold rains, or freezing temperature, fade into almost utter failure; and yet I am not discouraged. "Hope springs eternal in the human breast." I will keep my orchards in as good condition as I can and sometime my reward will come. The most successful fruit-growers are those who have conquered the greatest discouragements. J. H. Hale in the beginning of his memorable career as a peach-grower was beset by embarrassing debt, and met the discouragement of three successive failures of his first Connecticut peach orchard, due to inclement winters, but pluck and persistence won and he enjoys the distinction of being the most successful and extensive peach grower in the world. The ideal horticulturist is a lover of nature. He is above the mercenary spirit of the age, which

measures everything by the dollar mark. He is in no rush to get rich. He makes the world better by having lived in it. His life and work give inspiration to others. His premises and surroundings are an object-lesson to be emulated. He takes a public-spirited interest in public affairs, encourages the adornment of school and other public grounds by planting trees and flowers. He is respected in his community and regarded as a faithful exponent of horticultural interests; is always prepared to preach the gospel of horticultural lore and says with the poet:

"What does he plant who plants a tree?
He plants cool shade and tender rain;
The seed and bud of days to be,
And years that fade and flush again.
He plants the glory of the plain.
He plants the forest heritage,
The harvest of a future age,
The joy of inborn eyes to see.
These things he plants who plants the tree."

Mulching With Straw—Planting Evergreens.

Editor Kansas Farmer:—I have a small orchard about three years old. I am thinking of mulching it with straw to keep down weeds and expect to run water to the trees in ditches made under the straw. Would you advise mulching?

I intend setting a few Austrian pines this spring. What is the proper way to set and care for them? Will they do well this far west? Also, is it necessary to put sand around them on top of the ground to exclude air from the roots? Please answer through Kansas Farmer. G. T. S.

Hodgeman County.

We would not advise mulching orchards with straw heavy enough to keep down all weeds. The small roots would run too near the surface and be liable to injury from drought, and the sun would not have the effect on the soil necessary to a proper and healthy growth. A light straw covering would be less objectionable, but we believe most cultivators, in your section, prefer a dust mulch.

We quote from a veteran tree-planter of Central Kansas: "The red cedar, Scotch and Austrian pines have stood all the abuse I have ever known to be heaped upon them. No deciduous tree will stand more heat, cold or neglect. Dig the holes ten days or a month before planting the trees; fill them with water several times, and see that the ground is kept moist after planting."

It is essential in transplanting that the roots be kept continually moist as the sap when once dry forms a resinous compound not again soluble, and which obstructs circulation. Sand might be beneficial as a mulch, but we would not advise using it too heavily.

WALTER WELLHOUSE.

Fruit and Vegetable Garden.

Editor Kansas Farmer:—A fruit and vegetable garden for the busy farmer can be easily grown by taking about one acre, manure it heavily—about forty or fifty loads to the acre—plow about ten inches deep, in lands twenty feet in width, so as to drain readily. Set two or three rows of peach-trees, one row near each headland; and set two rows of raspberries to each row of trees; they make a fine growth and a large crop of berries each year. Mine produce twenty to twenty-five crates from one-fourth of an acre each year. Set a number of rows of cherries with two rows of gooseberries for each row of cherries. Set two rows of plums with two rows of blackberries; one row of pears with two rows of strawberries, one row of grapes, one row of Juneberries, one row of pie-plant, and the balance of garden to be worked with one-horse cultivator and a small amount of hoeing.

One acre so managed usually produces about \$100 worth per year, and does not materially interfere with farmwork.

C. E. HILDRETH.
Lambeth County.

The one and only law of life that sets a man free from all the forces that blight and destroy is the will of God. Show me a man who lives for one day wholly in word and thought and deed in the will of God and I will show you a man who is antedating heaven, and who for that day reaches the plane of life which is at once broadest, freest and gladdest.—Campbell Morgan.

Nations, like individuals, are powerful in the degree that they command the sympathy of their neighbors.

REAL SEED CORN

Graded or Crated ON APPROVAL

"Your money's worth or your money back." How would you like to have some "Real Seed Corn?"—the pedigree kind?—bred from stock that swept everything at the shows?—selected and graded so it will drop 97 per cent correct in an edge drop planter?—or shipped in the ear crated? And if you could get that kind of seed corn shipped on approval, with a guarantee that if it did not suit you I would make it suit or refund your money—really, wouldn't you call that a fair, square deal? My

SEED CORN BRED FROM PRIZE-WINNING STOCK

is just that kind—it has won all the important prizes around here, both on yield and form. I grow it myself on good Page County clover sod upland, store it in modern seed houses, select it carefully and ship it in the ear or shelled as you prefer. And it will grow, too—every lot is tested and guaranteed to show satisfactory test for you—or we trade back. Besides Seed Corn I sell all kinds of seeds—garden seed, seed potatoes, flower seed, clover seed—all tested and guaranteed. Send for my catalog, it's free, and I will add samples of garden and flower seeds and 10 kinds of seed corn, if you care to put up the postage for them. Write today, you'll like the way I treat you, and you'll like the seed I sell.

low prices. Write for catalogue. M. H.
Hiniker, Mankato, Minn., R. R. 4.

THE KANSAS FARMER**The Poultry Yard****The Hen Versus the Incubator.**

Mrs. Grace S. Brobst, before Oak
Grange Farmers' Institute.

Woman that abideth with man is of
few days and exceedingly full of trouble.
She beholdeth her depleted purse,
and pondereth how she may replen-
ish it.

She considereth a flock of fowls and
buyeth them.

But her husband liketh not poultry—
liketh only fried chicken and pot-pie;
therefore he provideth no place for
their habitation, neither alloweth he
them to partake of his substance.

The woman is not so; for behold she
riseth up early while it is yet dark
and maketh her way to the granary,
where she calleth her flock about her
and of the grain she feedeth them
abundantly.

She alloweth them to roost in the
branches of the trees, in the barn also
and upon the fence. She buildeth them
nests of alfalfa. So it is that "the help-
ful hen" getteth busy right soon, and
verily her cackle is heard from the ris-
ing of the sun until the going down
thereof.

Then cometh the farmer and findeth
hens sitting in the mangers of the
horses. It maketh him angry, for he
seeth not the relation between the sit-
ting hen and the chicken dumplings
smiling upon him from his midday
meal. So it cometh to pass that he
hath an interview with the woman and
what he sayeth to her, behold it is not
written in these chronicles. But the
woman maketh other nests for the sit-
ting hens, with cracker-boxes and a
tack-hammer maketh she them and fill-
eth them with straw.

But it is so that "the helpful hen" is
feminine and behold she hath a mind
of her own; therefore she refuseth to
accept any substitute for the nest of
her choice and although she is safe
within, she endeavoreth to get out and
continueth her endeavors until the eggs
are blended with the straw in the nest.

When the woman cometh and findeth
things in such a state she casteth the
hen into prison until such time as she
giveth up her desire to sit and return-
eth to the business of egg-production.

Other hens she setteth, and the busy
hens find those particular nests very
attractive for laying and the demon-
stration which followeth mixeth up the
eggs with a great mixture.

A few hens she succeedeth in setting
long and well, but she knoweth not
when she setteth a hen, whether said
hen will remain firm in the faith that
is within her, or, if after she hath been
on probation for a few days, she will
reconsider the matter and decide to re-
main in society. So it is that the wo-
man becometh distracted in her little
hencdom.

She is reluctant to give up and stop
trying for she knoweth by the light-
ness of her purse that the chicken busi-
ness is a very weighty matter.

While she yet pondereth these things
in her heart, there cometh the Kansas
Farmer and the Mail and Breeze, telling
about a wonderful machine, in which
to place nice fresh eggs and after many
days behold it hatcheth them.

Her heart is filled with a great hope
and she sendeth for a catalogue. It ar-
riveth in due season, she readeth it well
and thinketh that at last her troubles
are over; but when she asketh her hus-
band to purchase an incubator he
laugheth her to scorn. But being wise
in her day and generation she answer-
eth him enough but feedeth him the
more on the spoils of her flock and be-
hold he relenteth and telleth her that
she might sell enough chickens to make
the purchase.

So she goeth to the coops and select-
eth various fine fat hens, for she read-
eth in the daily paper that fat hens
bring ten cents per pound in the local
market.

She riseth up early, therefore, and
getteth her with her fowls to town.
Her husband goeth not with her but
stayeth at home and cutteth stalks.
The poultry-dealer weigheth the hens
and cheatheth her. The price also, he
telleth her is not so; for behold, the
price of hens goeth down to seven cents
but yesterday. She draweth one sigh of
disappointment and taketh what the
dealer is willing to give her, and add-
eth the price of the great basket of
eggs which she bringeth with her and
straightway sendeth for an incubator.

In due season the incubator arriveth
at the freight depot and the woman
persuadeth the farmer to get it, and

**POLYTRY FEEDING
AND FATTENING**

A handbook for poultry keepers on the standard
and improved methods of feeding and marketing
all kinds of poultry.

The subject of feeding and fattening poultry is
prepared largely from the side of the best practice
and experience here and abroad, although the
underlying science of feeding is explained as fully
as needful. The subject covers all branches, includ-
ing chickens, broilers, capons, turkeys and water-
fowl; bow to feed under various conditions and for
different purposes. The whole subject of capons and
caponizing is treated in detail. A great mass of
practical information and experience not readily
obtainable elsewhere is given, with full and ex-
plicit directions for fattening and preparing for
market. The broad scope of the book is shown in
the following

TABLE OF CONTENTS

Thrifty Growth. Expert Chicken Feeding, Broiler
Raising, Nutrition for Layers, Special Foods, To-
Finish and Dress Capons, The Art of Poultry Fat-
tening, Lessons from Foreign Experts, American
Fattening Methods, At Killing Time, Preparing
for Market, Marketing Turkeys and Waterfowl,
Finish and Shaping.

Profusely illustrated, 150 pages, 5x7 1/2 inches,
cloth. Price 50 cents postpaid.

**Buff Orpingtons
and Buff Legh**

More and Fertile Eggs

Your hens will positively lay more eggs, and a larger per centage of fertile eggs, if they are given regular doses of Dr. Hess' Poultry Pan-a-ce-a with the daily food. It produces this result by the action of bitter tonics which increase the powers of digestion, enabling the system of the fowl to extract the maximum amount of egg-making material from the food and convert it into eggs. It also supplies iron for the blood, and the nitrates to assist nature in expelling poisonous materials through the skin.

DR. HESS POULTRY PAN-A-CE-A

Is the prescription of Dr. Hess (M.D., D. V. S.), and besides increasing egg production, it cures and prevents poultry diseases. It contains germicides which destroy bacteria, the cause of nearly all poultry diseases. It has the endorsement of leading Poultry Associations of the United States and Canada. Costs but a penny a day for about 50 fowls, and is sold on written guarantee.

1½ lbs. 25c, mail or express 40c
5 lbs. 60c
12 lbs. \$1.25
25 lbs. \$2.50

RAISERS and**
Leading poultry experts say the many improvements in the new 1906 Pattern Standard Cyphers Incubator make it worthy the name "The Perfect Hatcher." Sold on 90 days trial, to prove that in convenience of operation; in economy of oil; in certainty of results; in large hatches and especially in strong and healthy chicks, it has never been equalled. Our new catalogue tells why. A poultry guide, 228 pages, (xxii) seven practical chapters, 500 illustrations, free if you mention this paper and send addresses of two persons interested in poultry.

Address nearest office.

Cyphers Incubator Co., Buffalo, N. Y.
Chicago, Boston, New York, Kansas City or San Francisco.

he bringeth it home and setteth it up in the cellar; but of the events incident thereto, behold, they are not written in these chronicles.

Howbeit she findeth the machine standing before her in its completeness and she discovereth that an incubator, like man, is "fearfully and wonderfully made."

At last all things being ready she filleth the tank with water, the lamp also she filleth with Standard oil and lighteth it; but she putteth not in the eggs until the second day. Then having regulated the machine perfectly, she putteth in nice fresh eggs, being happy in the assurance that none may molest or make afraid.

She turnmeth her lamp once each day, and twice each day she filleth it. She turneth the eggs also and cooleth them.

The fifth day she testeth the eggs. The fertile eggs she retaineth, but the unfertilized ones (tell it not to Gath) she taketh to the kitchen and beateth them into delicious custard pie.

Eighteen days does she keep her light brightly burning when she putteth in the moisture; for behold the artificial heat taketh away the natural moisture, nor giveth any in return.

Now she hath only to keep the heat regular until the twenty-first day, and lo! what a transformation! The eggs are broken and the cheeping, pecking, wondering little chickens overflow the machine.

Thus it is that the heart of the woman is filled with a great joy and she hath visions of wealth such as was never surpassed by a thrifty Kansas book agent.

She thinketh surely her trials are over, but she banketh overmuch on that which is uncertain, for she knoweth not yet how the tank may leak when the eggs have been in about ten days and how she must take out seventeen screws and cover the eggs with a shawl while she proceedeth to apply muriatic acid and solder to the leak. Nor does she know that sooner or later she must invest hard iron dollars in a copper tank ere her troubles are over. She knoweth not yet that the burner weareth out—price \$1—nor does she cipher on the possibility of Uncle John Do-em Rockefeller putting the price of oil up and up until the "helpful hen" seriously agitates race suicide. Nor hath she found from experience that the lamp smoketh.

Some morning she cometh down dressed as it were in purple and fine linen, for she goeth abroad in the land; when a terrible odor greeteth her from the lower regions where the incubator is located. She goeth in haste, and lo! and behold! the lamp smoketh and great is the smokiness thereof. Never before was lamp smoke so black, and never before was it so numerous. But she hath acquired the virtue of patience, so she straightway changeth her apparel. She changeth the lamp and learneth to not turn it up too high. These and many other things doth the woman do and learn; the whole, if I should write it I suppose would fill a book. But let us hear the conclusion of the whole matter.

I am persuaded, brethren, that the incubator doth the work of the hen, doeth it better, doeth more of it and doeth it with less trouble to both the old hen and the overworked housewife.

However, my brothers and sisters, I beseech you that you refrain from enumerating your infantile poultry, ergo the period of incubation be completed.

Feeding Quail.

The lesson of the great loss of life among quail occasioned by two severe winters has not been lost, says an official report. Perceiving the absence of food and shelter is the principal cause of mortality, State officials, game associations, and many private individuals have united in attempting to make good these deficiencies. Grain and other food have been distributed freely and systematically after heavy snowfalls, when the usual food is covered, and suitable shelter has been provided. Much activity prevailed last year in Illinois, Indiana, Massachusetts, Maryland, New Jersey, North Carolina, and West Virginia. Such measures are needed to preserve the quail from possible ultimate extinction; for with a growing army of sportsmen hunting them annually—an army that now numbers hundreds of thousands in this country—their ranks are each fall reduced so far below the normal that, if the succeeding winter happens to be severe, extermination of many colonies is almost sure to follow. Such a result is deplorable, owing to the great value of the quail to agricultural interests as a destroyer of insects and the seeds of weeds. Every farmer should feed quail about his place.

Dairy Interests

Butter-Making.
Mrs. Jerome Tice, before the Farmers' Institute at Berryton.

While the subject of this paper is a well-worn one, it can not fail to be of interest as long as butter is such a necessary article of diet. The ancient Greeks, while using milk and cheese, had no idea of butter. The Romans, however, used butter, but only as a medicine, never as an article of diet; and it must be confessed that some of the stuff sold to-day as butter would not make even good medicine. In the olden days butter was churned by shaking the cream in a bag made of skins.

Now we have the modern, up-to-date churn, of course in these days of skimming stations and creameries a great many sell their milk and thus avoid a good deal of extra work.

It is not the purpose of this paper to discuss which is the more profitable, to sell milk or make butter, but to tell how to make the best butter and market it at the highest market price. The writer has made butter for years, and has found this to be absolutely true: as good butter can be made from the milk of one cow as can be made from the milk of one dozen cows, provided the cream is taken care of. I have churned more than once in a gallon crock with a common stirring spoon and had gilt-edge butter. Persons intending to make butter for the retail trade should provide themselves with the following: A good separator, churn, butter-worker, print, scales, dairy thermometer, and a box of the best butter-paper. It is poor economy to try to get long without a good butter-worker, as they are such a saving of time and strength.

When the milk is brought to the house, strained and separated, the next step in making good butter is the proper care of the cream. Each skimming should be thoroughly stirred to get the animal heat out, and on no account should cool and warm cream be mixed. Some argue that better butter can be made from sweet cream, but I do not think so.

The cream should be kept in a warm place and stirred thoroughly every day till it ripens. When ripe it should be thick, smooth, and just acid enough to be pleasant to the taste. Churn at a temperature of 58 degrees F. in summer and 64 degrees in winter. When the butter has come in small globules stop churning and draw off the buttermilk. Wash the butter in the churn by pouring on a bucket of cold water and draining it off. Remove the butter to the butter-worker and salt it in the proportion of one ounce of salt to a pound of butter, using the best dairy salt. As the object of working butter is only to thoroughly incorporate the salt, have your print scalded and cooled ready for use.

Work the butter till you think the salt is well mixed in and no longer, as too much working breaks the grain and causes the butter to be oily. Good butter, when broken apart, should have rough, uneven surfaces and should not look slick. Wrap each pound as printed in a sheet of the best parchment paper. Provide yourself with a good tight box to pack the butter in preparatory to taking to market. Perhaps you had better take the butter yourself the first time, as women are proverbially the best talkers. Sell the butter the first time on trial, believing that after

a trial you will have a permanent customer. Be sure that every pound weighs sixteen ounces and be careful not to promise more than you can furnish. When you have established a reputation for the excellency of your butter, be very careful not to injure it in any way. If you can not supply your customers at all times, never try to sell them some one else's butter unless you tell them and they are agreed. To sum it all up, take care to always have a first-class article, and the strict observance of the golden rule is all that is necessary and you will find if these are observed you can not supply the demand.

Cost and Profit of Dairy Business.

A correspondent of Hoard's Dairymen has investigated the methods and the results attained by creamery patrons in Delaware County, N. Y. Following are his reports on some of the cases:

Herd No. 31.

Consists of 36 grade Jersey cows, fresh at different times through the winter.

Owner's estimate of the cost of keeping a cow for the year, and the creamery record of returns, are as follows:

Hay (2 tons).....	\$20.00
Grain (800 lbs. cottonseed-meal and mixed wheat feed).....	9.60
Pasture.....	5.00
Total.....	\$34.60
Returns from creamery.....	\$56.98
Cost of feeding.....	34.60
Actual profit.....	\$22.38
Pounds of milk.....	4,416
Pounds of butter-fat.....	213.5
Price of butter-fat (including other solids).....	\$0.268
Price of milk per 100 lbs.....	1.21

Stables warm and light. All voidings of cattle held in tight gutters and hauled and spread as made. Thoroughbred hull is kept and heifer calves raised. Farmer enterprising and progressive. Takes and reads dairy papers.

Herd No. 32.

Consists of 20 grade Jerseys, fresh from February on.

Owner's estimate of the cost of keeping a cow for the year, and the creamery record of returns, are as follows:

Hay (2 tons).....	\$20.00
Grain (500 lbs. cottonseed-meal, wheat, mixed feed).....	6.00
Pasture.....	5.00
Total.....	\$31.00
Returns from creamery.....	\$49.95
Cost of feeding.....	31.00
Actual profit.....	\$18.95
Pounds of milk.....	3,973
Pounds of butter-fat.....	169.8
Price of butter-fat (including other solids).....	\$0.294
Price of milk per 100 lbs.....	1.25

Stables warm and light. Manure drawn as made, keeps thoroughbred hull, raises heifer calves. Takes and reads farm papers, including Hoard's Dairymen.

Herd No. 33.

Consists of 41 grade Jerseys, fresh in fall and winter.

Owner's estimate of the cost of keeping a cow for the year, and the creamery record of returns, are as follows:

Hay (2 tons).....	\$20.00
Grain, 5 months, 6 lbs.....	12.80
Pasture.....	5.00
Total.....	\$37.80
Returns from creamery.....	\$38.77
Cost of feeding.....	37.80
Actual profit.....	\$.97
Pounds of milk.....	2,238
Pounds of butter-fat.....	152
Price of butter-fat (including other solids).....	\$0.253
Price of milk per 100 lbs.....	1.73

Fine, large barns, with warm and light basement stables. Grade bull is kept, heifer calves raised. The owner of this herd is an invalid, and not able to give personal attention to his herd. Abortion has also refused the profits.

No farm papers are taken.

Herd No. 34.

Consists of 31 grade Jersey cows. Owner's estimate of cost of keeping a cow for a year, and the creamery record of returns, are as follows:

Hay (2 tons).....	\$20.00
Grain (900 lbs. cottonseed-meal, gluten and wheat feed, bran).....	11.70
Pasture.....	5.00
Total.....	\$36.70
Returns from creamery.....	\$40.01
Cost of feeding.....	31.70
Actual profit.....	\$8.31
Pounds of milk per cow.....	2,898
Pounds of butter-fat.....	143
Price of butter-fat (including other solids).....	\$0.279
Price of milk per 100 lbs.....	1.88

Warm and light basement stables; a

Sharples TUBULAR CREAM SEPARATORS

Will you buy a bad separator because the agent is a "good fellow"? Some people do. They should read this.

If You Have a Brand New Separator

not a Tubular, put it in the garret. We guarantee Tubulars to make enough more butter than any other separator, and from the same milk, to pay 25 per cent yearly interest on their cost. You test them free side by side. Your decision is final. Carnegie is using investments paying 6 per cent; here is a guaranteed 25 per cent to you. The waist low supply can—simple bowl—enclosed, self-oiling gears—are found only on Tubulars. Catalog T-165 explains it.

To You Who Milk and Sell Cream
There are Two RoadsTO
The Final Destination of Your Products

One is a Toll road.	The other is free.
One is a long road.	The other is short.
One is unattractive.	The other is beautiful.
One is full of obstacles.	The other is clear and smooth.
On one are many delays.	On the other is rapid transit.
On one the trip is expensive and tedious.	On the other the trip is economical and pleasant.
On one the trip is disappointing and you dread to repeat it.	On the other the trip is fascinating and you repeat it often.
One of these roads leads to failure.	The other to success.
At the end of one of these roads is a promise.	At the end of the other is the cash.
One of these roads is the old way.	The other is the "Blue Valley" way.

WHICH ONE ARE YOU TRAVELLING?
"BE SURE YOU'RE RIGHT, THEN GO AHEAD."

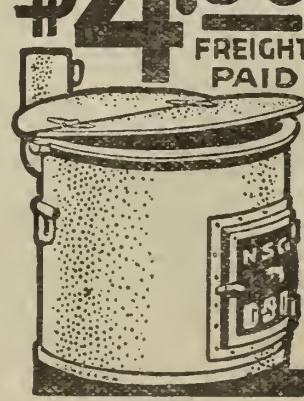

Send your Cream to us. Our system protects you.
Yours respectfully,

BLUE VALLEY CREAMERY CO.,

ST. JOSEPH, MISSOURI.

None, extra
large, ever

\$4.60 FOR THIS "ECONOMY" BOILER AND FEED COOKER

The "Economy" Feed Cooker is the best built cooker on the market today. It is constructed so as to get the very best results from the smallest amount of fuel possible. The kettle is well and securely bolted to the bottom cast iron and has a handle on each side so that it can be removed from the casing instantly. Will last a lifetime. The casing, or jacket, is one continuous sheet of cold rolled boiler steel supported at the bottom by a heavy wrought iron band. This cooker has the largest fire door of any made, and is the strongest, most serviceable feed cooker ever sold at such a price, freight paid. Made in seven sizes to suit every need; furnished with hinged cover, elbow and one length of pipe with damper. We guarantee this cooker for one year. Send money with order today, or write for our large 1,000-page catalogue giving other sizes and thousands of money-saving bargains for the farmer and his family.

If you want to save 10 per cent on everything you buy, we have a plan you should know about; it will save you from \$150 to \$250 a year. Only costs a stamp to find out all about it.

The object of this Society is to save money for its members. For full information let us tell you how we do it. Co-Operative Society of the National Supply Co., Lansing, Michigan, Chicago, Illinois

LIGHTNING PORTABLE WAGON and STOCK SCALE

All above ground. Steel frame, only eight inches high. Octagon levers. Tool steel bearings. Compound beam. Most accurate and durable. Write for catalogue and price.

Kansas City Hay Press Company.
121 Mill Street, Kansas City, Missouri.

grade bull is kept. Calves raised. The owner of this herd is a widow; farm work carried on with hired help. Agricultural papers are taken but no especial dairy paper.

Herd No. 35.

Consists of 45 grade Jersey cows. Owner's estimate of the cost of keeping a cow for the year, and the creamery returns, are as follows:

Hay (2 tons).....	\$20.00
Grain (6 lbs. of gluten and mixed feed).....	10.25
Pasture.....	5.00
Total.....	\$35.25
Returns from creamery.....	\$64.84
Cost of feeding.....	35.25
Actual profit.....	\$29.59
Pounds of milk.....	4,978
Pounds of butter-fat.....	214
Price of butter-fat (including other solids).....	\$0.40
Price of milk per 100 lbs.....	1.30

Stables are warm and light. Thoroughbred bull is kept; heifer calves are raised. Absorbents are used in gutter. Manure thrown out and hauled once a week. Farm papers are taken, including Hoard's Dairyman.

Herd No. 36.

Consists of 15 cows, Jersey grades, fresh in January.

Owner's estimate of cost of keeping a cow for the year, and the creamery record of returns, are as follows:

Hay, 1½ tons.....	\$15.00
Grain (1,600 lbs. gluten and wheat mixed feed).....	19.20
Pasture.....	5.00
Total.....	\$39.20
Returns from creamery.....	\$47.85
Cost of feeding.....	39.20

Actual profit..... \$8.65

Pounds of milk..... 3,653
Pounds of butter-fat..... 174
Price of butter-fat (including other solids)..... \$0.22
Price of milk per 100 lbs..... 1.31

Stables are warm and light; all droppings of cattle saved in tight gutters and hauled and spread as made. Agricultural papers are taken, but no special dairy papers.

Herd No. 37.

Consists of 11 cows, Jerseys, grades fresh in spring.

Owner's estimate of the cost of keeping a cow for the year, and the creamery record of returns, are as follows:

Hay (2 tons).....	\$20.00
Grain (wheat and cornmeal feed).....	10.00
Pasture.....	5.00
Total.....	\$35.00
Returns from creamery.....	\$54.96
Cost of feeding.....	35.00

Actual profit..... \$19.96

Pounds of milk..... 4,057
Pounds of butter-fat..... 221
Price of butter-fat (including other solids)..... \$0.24

Cost of feeding..... 50.37

Actual profit..... \$36.60

Pounds of milk..... 4,802

Pounds of butter-fat..... 281.3

Price of butter-fat (including other solids)..... \$0.27

Price of milk per 100 lbs..... 1.54

Stables are all that could be desired as to warmth and light. Manure all saved and applied as made. Thoroughbred bull is kept and heifer calves raised.

Dairy papers are taken and read.

Each patron received for \$1 invested in feed as follows:

No.	Received.	Per cow, Profit.
31.	\$1.64	\$22.38
32.	1.61	18.95
33.	1.02	.97
34.	1.26	8.31
35.	1.83	29.59
36.	1.22	8.65
37.	1.57	19.96
38.	1.61	20.70
39.	1.22	7.24
40.	1.72	36.60

It is a common practice among the patrons of this creamery to skim a portion of the milk and send the cream. This accounts for the comparatively small amount of milk as compared with the butter-fat.

Stock Interests

YOU CAN'T AFFORD TO MAKE A MISTAKE

ISN'T THIS WHAT YOU WANT?

1. The separator that will get all the cream without impairing its quality.
2. The separator that will be the easiest on you—easiest to turn and easiest to wash.
3. The separator that is the easiest to care for.
4. The separator that will last the longest and require the fewest repairs.
5. The separator that is really the most economical.
6. The separator that has an old-established, reputable manufacturer behind it.

Now, then; we claim that the Omega Cream Separator is the only separator that meets all those demands.

We claim that it is the most economical, the easiest to wash, the simplest to care for, the easiest to turn, the most durable and that it will last longer with fewer repairs than any other.

WE PROVE OUR CLAIMS—All we ask of you is a chance to prove that every claim we make is true. If you'll let us we'll set up an Omega on your own farm without money and without price, in order that you may give it

AN ABSOLUTELY FREE TRIAL

If you don't think it greatly superior to all others—if you are not perfectly satisfied with it—don't keep it. The trial costs you nothing. Are you willing to give it a trial? Don't you owe it to yourself to investigate our claims? They mean a big saving to you in time and money. Write today for catalog.

THIS BOOK FREE TO YOU—New book, "More Milk Money," tells how to care for separator cream; how to make good butter; how to select good dairy cows; how to prevent white specks in butter; how to wash and work butter, and a hundred other things you ought to know. Free if you mention this paper, tell how many cows you keep and give address of a neighbor who keeps cows.

The Omega Separator Co., 23 Concord Street, Lansing, Michigan.

**DAVIS LOW DOWN SEPARATOR**

Goes direct from factory to you. No state agents or traveling salesmen to pay. Straight factory prices. And it's absolutely the

Easiest to clean, easiest running, simplest separator on earth. We guarantee that with a Davis your profits will increase \$10 per cow while cutting your labor in two. Freight prepaid. Send for money saving catalog No. 125 right now and investigate.

GRANTED A DEDICATED LIFE IN HONORABLE CRAFTSMANSHIP.

stallions and successful brood mares. The terms are liberal and the guarantee the strongest. The horses will be ready for inspection several days before the sale and we advise that you come and look them over carefully. You will think more of them after you see them—and you know what you are bidding on before it gets into the ring. We will both profit by this effort. Let us get together on the 24th."

Northern Kansas Swine-Breeders.

Committee on arrangements—J. R. Johnson, C. W. Dingman, and G. W. Crooks, Clay Center; J. J. Ward, president, Belleville; L. D. Arnold, secretary, Enterprise.

Ward's "Attraction" Poland-China Sale.

One of the best bred-sow sales to be held this season will be the "Attraction" sales to be made by J. J. Ward & Son at their farm 2½ miles south of Belleville, Kans. These gentlemen have been good buyers at the best sales for several years, always buying the best of the large, heavy-boned type. They have always kept the best of their own raising and as a result are enabled at this time to offer to the public one of the best collections of bred sows that have ever gone under the hammer in that part of the State. The offering will all be bred, a part of them to the great and much-talked-of boar, Skybo, the boar that Messrs. Ward have recently purchased of Mr. Lail for a long price. Skybo was sired by Grand Chief, dam Juanita, one of Mr. Lail's greatest sows. She has produced State-fair prize-winners in each of her last four litters. Skybo was shown at the Illinois State Fair last year and won third in class and headed the young herd that won first, the same litter winning second and third. The remainder will be bred to the good breeding boar, Wonder's Perfection 2d, half brother to Victor X. L., the boar that won at St.

Nemo L's Dude, the great Poland-China herd boar belonging to John Bollin, Leavenworth, Kans., is the progenitor of all Dudes and the sire of more than 100 State Fair, American Royal, and World's Fair prize-winners. In the great sale to be held by Bollin & Aaron at Leavenworth, Kans., on February 22, 1906, there will be sold 25 sows bred to this great \$1,000 boar. This will be the best offering ever made in Leavenworth. Address John Bollin or Gus Aaron, Route 5, Leavenworth, Kansas, for catalogue.

Louis. While there are a lot of mighty fancy bred and splendid stuff included in the sale, some of it is right up close to the fountain head. Three great sows will be offered at this sale, Expansioness, May Expansion, and Expansion Lady, all three great, big, heavy-boned sows and just in their prime as breeders. Others offered are Pansy Blossom, a litter sister to Coquette 93829; Mischievous Fanny 91760 by Mischief Maker and bred to Nonpareil; Keep Sake 91759 by Meddler 37380 bred to E. L. 2d; and Olive 91761 by Woodbury 33858 bred to Rollin's Chief, he by Chief Perfection 2d. Send for catalogue and make your arrangements so you can attend this sale. If you are unable to attend send bids to C. E. Shaffer of the Kansas Farmer.

The Kansas City Hereford Sale, February 28 and March 1.

The breeders consigning to this sale are all members in good standing of the Hereford Association, and have combined at this time to make what they believe will be the most important sale of the season.

Each breeder is putting forward some of his very best animals, and this will be an opportunity for those contemplating buying to secure some of as good blood as there is to be found in the herd book, and to secure it at no exorbitant price.

It will be a good time to buy for the reason that the cattle will not have to be carried long on feed until grass comes, and the buyer will get the benefit of the good care that has been taken of them by their owners.

Knowing for quite a long time that this sale was to be made, each of the contributors has taken good care of his animals, to the extent that none of them have in any way been stunted, but are all large for their age and are good, growthy, healthy individuals.

It will be a good opportunity for the ranchman who is desirous of securing a carload, as nearly half the animals

catalogued are bulls, and every one is of serviceable age, so that no time need be lost, but all can be put to immediate service.

Every animal is thoroughly guaranteed, and the sale will be conducted in a strictly honorable and business way.

As will be seen by the catalogue, quite a number of the females are in calf to excellent sires.

Cattle are going to be higher in the very near future, so if you have been thinking of buying, do not delay longer.

You are cordially invited and are urged to attend this sale.

Should you desire any further information relative to the same, write Secretary C. R. Thomas, 221 West 12th St., Kansas City, Mo.

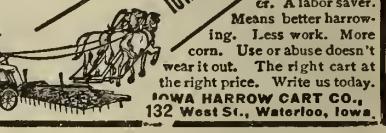

"You Must Show Me."

The above sentence is heard so frequently in business that we have come to believe that it is evident that it must have some deep meaning behind it—something that stands at the very foundation of the business relations between man and man. If you boy drops into a New York or Chicago business house and asks for a job, the manager's first words are: "Yes, you can go to work but you will have to show me." In other words, the boy must prove his value before his salary is fixed. If a tracing man for some big farm implement house calls on a dealer in your town, the dealer says: "Yes, I'll try your drills but you must show me or give me back my money. If they sell well and stand the wear, I will want your line."

This idea of "satisfaction or money back" is getting to be almost entirely the basis on which legitimate manufacturers do business. It is their way of proving their confidence that their product will "make good." For some reason this "honor plan" of selling goods has never been applied to the sale of groceries and the various food-stuffs used on the farm. But we advertise in this issue the new idea as applied to the sale of a poultry food

The Farmers Road To Wealth

In adopting up-to-date ideas and implements, the 1906 idea in the way of an implement is the

IOWA HARROW CART

A money saver. A time saver. Means better harrowing. Less work. More corn. Use or abuse doesn't wear it out. The right cart at the right price. Write us today.

IOWA HARROW CART CO.,

Send your orders quick.

which is guaranteed to make hens lay and is sold with the express provision that if it fails you get your money back. This food is called Security Poultry Food and is put out by the Security Stock Food Company of Minneapolis, whose goods are famous throughout the United States as being sold exclusively on the plan of giving every man his money's worth or his money back and letting him be the sole judge. Ask your local dealer to "show you" their guarantee.

Main's Poland-China Sale.

When James Mains, of Oskaloosa, Kans., announces a Poland-China sale the breeders of the West understand that there will be something doing. This time the sale will be held at his farm on February 28, 1906, and includes 70 head. A number of these were sired by Empire Chief by Chief Tecumseh 2d 20740. Two-thirds of the offering has been bred to Roller Trust 37010 by High Roller 37009, champion of Ohio and the sire of many prize-winners, including 19 at the World's Fair.

Roller Trust is an extra smooth, stately hog with broad fancy head, fine tip ear, fine, smooth coat of hair, splendid heart girth, strong, broad back, extra good hams, strong, heavy f' length, and a breeder of litters. He is assisted by Corrector 2d, Meddler, and Harmonizer boars. Over half of Mr. Main's reserve brood sows are included in this sale. Mention the Kansas Farmer and write for catalogue.

An Opportunity for a Good Investment.

The Kansas Farmer desires to call attention to the real-estate advertisement of Albert King, of McPherson, Kans., which appears in this issue. The land advertised by Mr. King is entirely under his control and can not be purchased by any one except through his agency. This land consists of scattering quarter sections in different parts of Sherman County, and in most cases they adjoin highly improved farms, are close to schools and churches, and in good communities.

If any one wishes more land than Mr. King has in any one body, he will buy the adjoining land and allow the purchaser to pay for it in small payments. This offers a splendid opportunity to any one seeking investment to buy this land, making a small payment down and holding it for higher prices, or to any one who desires to make a start at this time towards owning a home. Mention the Kansas Farmer and write him to-day for full particulars.

Lincoln, Nebraska, Is Proud of the Queen.

The Pinkerton Manufacturing Company has an enviable reputation in the incubator field and the people of the Capital City are justly proud of the Queen Incubators and Brooders made by this company. This company with its extensive plant and modern equipment is one of the big enterprises of Lincoln, Neb.

In a remarkably short time the Queen Incubators and Brooders have become

Gaffine 34796, full brother to grand champion mare at World's Fair. Second prize winner at Kansas and first prize winner at Colorado State Fair. Color, black. Weight, 1,850, and one of the attractive offerings at the Avery closing-out sale at Manhattan, Kans., Saturday, February 24, 1906.

KANSAS IMPROVED STOCK-BREEDERS' ASSOCIATION SIXTEENTH ANNUAL MEETING.

(Continued from page 161.)

State fair for side-shows than for a monkey-show in a Sunday School.

Mr. Glick: I desire to move that our association return their thanks to our worthy secretary, Mr. Heath, and his assistant, Mr. Graham, for the able and efficient work they have done for this association, and also our thanks to our worthy president and his assistant for the able and fair manner in which they have presided over the deliberations of this body. Motion carried.

Mr. Vincent, of Hutchinson, was introduced and made some remarks regarding a new hog-cholera remedy.

GENERAL DISCUSSION.

Mr. Westbrook was called for for some remarks on the Standard-bred horse.

Mr. Westbrook: This is very unexpected to me. I want to say to you gentlemen that listened to that paper this morning, that was the best paper I ever heard on imported horses. The gentleman gave a good talk and a good paper. But I want to call your attention to the fact that he gave you the other side. We will give you the amusing side, the pleasure part. I do not believe I am looking at a man but has a buggy and a buggy horse, and that horse does not weigh 2,000 pounds. Take a Standard-bred horse and see the intelligence, and what a pleasure it is to own one, and what a pleasure it is to see your boys driving them and riding them.

Mr. Kirkpatrick: I am glad that Mr. Westbrook is keeping up his courage in producing horses for the amusement of the people of the country. But he has overlooked one thing in the passing of that horse into the automobile.

Mr. Westbrook: He is entirely mistaken. Now, excuse me. Nobody that likes horses wants an automobile. Men in our town that own automobiles don't own much land.

A Member: I think he has started something going when he advises the farmers of the State of Kansas that the way to keep their boys on the farm is to supply them with a trotter on the farm. The trotting horse has ruined thousands of them. I tell you a good Percheron horse or mare never ruined a young man. I am proud to say I gave one to my son.

A Member: I keep this Standard-bred horse for pleasure.

A Member: I would like to say one word in behalf of the Percheron horse. We want something besides sporting horses; we want something that can do the work. I have a pair of Hambletonian mares, but the Percheron horses do the work.

Mr. Westbrook: A good, serious-looking gentleman has got up here and made out that I was talking about sporting horses. I don't want any one to get the impression that a man has got to be a sporting man to own a Standard-bred horse.

NEEDED INFORMATION.

Mr. Gentry: I only want to take just a minute. I think it strange in this large audience that the Missouri mule has not found a friend.

A Member: I have been through quite a number of Missouri counties and noticed the splendid mules they are raising in that country. In fact, mule-raising is one of the greatest industries in that State. I was told a few weeks ago that mules are higher now than they have been since the Civil War. I told them Kansas is now raising some as good mules as are raised in Missouri.

Mr. Gentry: I did not mean to say that I was not a friend of the driving horse.

Mr. Robison: I have been listening to this discussion with a good deal of pleasure. I chanced to be over at Mr. Gentry's fair in Missouri, and the largest jack-grower in that State, and one of the most successful, said: "I wish you would send a thousand of that kind of horses into Missouri so that we can get some good horses to raise mules with." How are you going to get your Missouri and Kansas prize-mules without horses to produce that kind? We have got to get the bone, the muscle, and the squareness. We can not get it without getting a draft build into that mule.

Mr. Wellhouse: The finest pair of mules that I have ever seen were over here at McAfee's; he's too modest to tell about it.

Mr. McAfee: My mules came from Louisville, Ky., and they were bred from high-grade Standard-bred mares.

Mr. Avery brought up the subject of registration of Percheron horses in the United States, and after considerable

discussion the following motion was made by Mr. Heath:

"That we recommend to the Percheron associations that in the interest of the Percheron horse they speedily get together in one acceptable registry association."

Motion carried.

Mr. Heath: Before we adjourn I want to take this occasion on behalf of myself and Mr. Graham, assistant secretary, to express our appreciation for the vote of thanks. We do not feel that there is a great deal due us, for the reason that we are both very busy men, and what we do for this association is in the nature of extra work. I simply say that where mistakes occur we are always glad to correct them. If you find anything wrong in your account, or anything else, if you will take it up with us we will gladly correct it.

Pasturing Pigs on Stubble-Fields.

BY A. C. TRUE, DEPARTMENT OF AGRICULTURE, WASHINGTON, D. C.

When grain is harvested some necessarily escapes the reaper and is usually lost. While this amount may hardly be sufficient to make it profitable to follow the reaper with a rake, the scattered grain may be profitably utilized by turning pigs or other stock into the stubble-fields, and as a matter of fact the custom of pasturing stock on such fields is quite common in many regions.

Some interesting experiments have been made at the Montana Station to learn the value of this as compared with other methods of feeding. Forty-one pigs from 6 to 9 months old were allowed the run of barley-, wheat-, and pea-stubble-fields, of 18, 10.44, and 10.73 acres, respectively. For some time before the test they had been pastured on alfalfa and fed 1 pound of cracked barley per head daily. For 10 weeks immediately preceding the test they made a daily average gain of 0.42 pounds per head. While pastured on the stubble-fields they were given no grain in addition to what they could find except on stormy days. The grain thus fed amounted to 24.1 pounds in the 5 weeks of the test.

During this time the pigs made a gain of 22.8 pounds per head, or 17.5 pounds, deducting the amount which it was calculated they gained from the grain fed during stormy weather. On the supposition that 4.5 pounds of grain are required to produce a pound of pork, 41 pigs gathered 3,228.75 pounds of grain, which otherwise would otherwise have been lost. The harvesting had been done in the usual manner, and in the investigator's opinion the amount of peas and grain remaining in the field did not exceed that left in the stubble-fields on the average farm. The scattered grain could not have been saved in any other way, and represents a clear profit.

The grain saved from the stubble-fields by these pigs was not all that could have been gathered if they had remained in the fields a longer time. Seven brood sows were afterwards pastured during the winter on the station stubble-fields, which included a 24-acre oat-field in addition to those mentioned above. They were given no food in addition to what they could gather except kitchen slops and a small grain ration on stormy days. The sows frequently rooted down through six inches of snow and found sufficient grain to keep them in good condition throughout the entire winter.

It is stated in a recent communication from the Montana Station that several brood sows have been pastured during the past season on stubble-fields without receiving any grain in addition, and that they are in fair condition. They had, in addition to the grain stubble-fields, the range of clover, alfalfa, and timothy meadows, and the gleanings of fields where root-crops had been raised. The manure from grain-fed stock, which was spread upon the fields, also furnished some grain.

There never was a day that did not bring its own opportunity for doing good that never could have been done before and never can be again.—William Burleigh.

"How to Grow Corn"

This is a valuable book from the pen of Prof. A. D. Shamel of the Illinois Experiment Station. It is profusely illustrated from photographs, and treats scientifically the subjects of Selection, Modern Corn Breeding, and the most effective Cultural Methods under all conditions of soil. Any farmer can Double his Corn Crop without extra labor or increasing his acreage by utilizing Prof. Shamel's discoveries.

This 50 cent Book is FREE to FARMERS

While the supply lasts I will send a copy of this valuable book to any farmer who will send me the names and addresses of three or more men who are thinking of buying a riding plow this season. I will include with the book a description of the labor-saving EMERSON FOOT LIFT GANG

PLOW and other modern implements, which make easy the cultural methods recommended by Prof. Shamel. Make sure of a copy by writing

TODAY. Address me personally, K. L. EMERSON, care of

EMERSON MANUFACTURING CO., ROCKFORD, ILL.

Prof. Holden demonstrating his Seed Testing Box. (Page 17 of the book.)

BEST FOR THE WEST

Plant the seed best adapted to your soil. The Missouri Seed Co. have made a study of the kind of seed best adapted to the old and new sections of the West and Southwest, and handle no other. Be sure to get our large seed book. No better seed grown for irrigated ground. Address

MISSOURI SEED CO., 1427 St. Louis Ave., Kansas City, Mo.

SEEDS

CATALPA AND OSAGE FOR POSTS

Every farmer should grow his own post timber. Get the true catalpa speciosa. We have it. We also offer fruit trees, shade trees, small fruits, grape vines, flowering shrubs, etc. Tell us what you want. We will make the price right.

PETERS & SKINNER, No. Topeka, Kans.

IN GEORGIA & ALABAMA, as well as the most prosperous dairyman, the most thriving breeder of horses, mules, sheep, cattle and hogs, the most expert fruit-grower or trucker, is usually the Northern or Western farmer, who has located in those States in recent years and applied proper methods of culture. Thousands of others are coming this year and next.

WHY NOT YOU OR YOUR BOYS. No blizzards. No droughts. Average temperature forty-five in winter and eighty-five in summer. Rain-fall fifty inches, evenly distributed. Tax rates low. No hard winters to feed against. Open sheds. Ten months pasture.

These are but few of the many advantages.

NOW IS YOUR OPPORTUNITY to duplicate the success of these men down South, through the extension of our main line from Atlanta, Georgia, to Birmingham, Alabama, in and between which cities two million people consume farm products. The highlands are intersected with wide grassy valleys, and inter-penetrated with streams of purest water. The alluvial soil of the valleys produce the heaviest possible yields of clover, all grasses, corn, alfalfa, etc., and furnish luxuriant pasture. The highlands are ideal for peaches, apples and other fruits, and the mountain lands afford good range for sheep and goats. Lands can be purchased at from \$2.50 to \$35.00 per acre, near town, and good schools. Terms easy.

For handsomely illustrated literature and full lists of properties available throughout the South, address, mentioning this paper,

J. W. White, G.I.A., Portsmouth, Virginia, or H. B. Bigham, A.G.I.A., Atlanta, Georgia.

KANSAS FARMER CO., Topeka, Kansas

DO IT NOW.

FRANK IAMS

and his "Big 4" three year old Percheron stallions, weight 8340 pounds. Winners of 1st, 2d, 3d and 4th prizes at Iowa and Nebraska State fair (over all). They are "sensational show stallions"—"Iams' sort." Iams sells models like these "Peaches and Cream" stallions at \$1000 and \$1500. It's up to you, Farmer John! Will you be "humble g'd" by "bunco salesmen?" Iams owns and sells more 1st-class stallions than any man in the United States. He has his "selling clothes" on, no man with cash or bankable note gets away from Iams. "Back up," Bill, see Iams' daily "Horse show" and his "town of horse barns" filled to the roof with wide-as-a-wagon "black boys."

151—STALLIONS—151

2 to 6 years old, weight 1700 to 2600 pounds, 90 per cent "top stallions." All registered, approved and stamped by European Government. Dad, it's "100 to 1" that Iams is pushing his competitors off the roof and hypnotizing his buyers with "top notchers" at 50 cents on the dollar, "let live prices." Iams' "horse show" at Iowa and Nebraska State fair was the "talk of the town." The "best ever." All winners and sons of winners. His 2, 3 and 4 year old Percherons, Belgians and coach stallions won every 1st, 2d, sweepstakes and grand sweepstakes prize at Nebraska State fair. At Iowa State fair they were winners of 90 per cent of same prizes in above classes, and the Iowa and judge. Iams pays horses' freight and vertiser, but "he has the goods" better than he advertises. Teddy, it's "16 to 1" that Iams' "Peaches and Cream" stallions are "hot stuff" (for competitors). "It's a cinch" that Iams saves his customers thousands of dollars in commissions and middlemen's profits. Iams places \$1000 insurance for \$60.

\$1,000—SAVED AT IAMS'—\$1,000

Ikey! What a rich graft these "slick stallion salesmen" are working on the honest farmer selling 4th rate stallions at \$2000 to \$5000. Iams sells "top notchers," so good, big and cheap that they do not need to be peddled to be sold. Mr. Buyer, see Iams' stallions yourself. Take no "gold brick stallion salesman's" word. Iams has "the goods" you read about. His establishment is worth going 2000 miles to see. Iams makes his competitors "holler." He is knocking "high prices" out of the X'mas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. Georgie, dear! Buy a stallion of Iams. His \$1200 stallions are much better than our neighbors paid those Ohio men \$4000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from breeders, pays no buyers, salesmen or interpreters, has no two to ten men to divide profits with. Iams guarantees to sell a better stallion at \$1000 to \$1500 than are sold to Stock Companies for \$2500 to \$5000 by "slick salesmen, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalogue on earth. Catalogues may be had of John S. Cooper, South Omaha, or Mark M. Coad, Fremont, Nebraska.

Snyder & Cooper Consignment
extraordinary to the
Wichita Breeders' Sale of Poland-Chinas
February 24, 1906

Five bred to Simply O. K., the boar good enough to defeat the Missouri and Illinois State Fair sweepstakes hogs of 1901 in the first show of the season and should logically be classed as the greatest of all the show hogs of 1907 (the catalogue gives details). These are by Keep On, Chief Perfection 2d, Mischief Maker, Proud Perfection and Perfect Tecumseh. Four gilts by Arsenal (the great show breeding boar, half brother to the sire of the World's champion sow and much the same kind of a breeder) bred to Meddler Correct. Four are by Arsenal and one by Ideal Perfection bred to the Premier breeder, Mellow Sunshine, one of the best hogs of an \$850 litter sold at 5 months old and out of a \$750 dam and by a \$5,000 sire. One boar by Meddler out of Chief Perfection 2d, dam; one by Luster Sunshine out of Mischief Maker dam, and others.

160 acre farms in

Sherman County, Kansas

At from \$5 to \$15 per acre. ONE FOURTH CASH, the balance payable in nine equal annual payments. One crop will pay for the farm. Healthful climate, splendid schools, railways close at hand, good neighbors. Soil is black loam, good depth, no sand, very productive. 1905 Wheat crop averaged 25 bushels to the acre. Write me at once, as these farms will not last long at the present prices.

Albert E. King, = = = McPherson, Kansas

STRAWN'S SHORTHORN SALE

AT VALLEY FALLS, KANSAS, MARCH 1, 1906

25 Head--6 Bulls, 19 Cows and Heifers

My sale to be held March 1 at my stock farm five miles north and two miles west of Valley Falls, and one mile north of Half Mound, offers a splendid opportunity to those who wish to add to or establish a herd. We have been breeding Shorthorns for many years, and our offering includes many breeding cows, with which until now, we have refused to part. Some of my calves are grandsons and granddaughters of Gentlemen 126073, the famous Kansas Agricultural College bull, who was formerly at the head of my herd. I also offer my grand herd bull, Prime Albert 213593. These cattle are not fat but are in true breeding form, and in such shape as can not fail to do good for the buyer. At this sale I will also sell a work team and a team of driving horses; also some 2- and 3-year-old mules. Also 18 grade cattle. For further information and catalogue, address

L. R. STRAWN, Half Mound, Kansas

FIFTH ANNUAL COMBINATION SALE

WICHITA, KANSAS, FEBRUARY 21-24, 1906

FEBRUARY 21, 1906

50 Percherons

from J. W. and J. C. Robison's great Whitewater Falls prize-winning herd. 25 stallions, including the great stallion Iena; nearly all Royal and Kansas State Fair winners. 25 mares, mostly blacks

and many of them sired by or bred to the World's Fair Winner Casino. A young, useful lot the equal of which has not been offered heretofore.

FEBRUARY 22, 1906

50 Shorthorns

drafted from the great herd of S. C. Hanna of Howard, Kansas, and J. F. Stodder and Marshall Brothers at Burden, Kans. These herds need no introduction to Kansas people, and when it is known

that the animals for this sale were selected and have been reserved for months, the merit of the offering is assured. Bulls bred and reared for use in the best herds and cows and heifers bred to pure Scotch bulls.

FEBRUARY 23, 1906

50 Herefords

Selected by Robt. H. Hazlett from his Hazelford Place at El Dorado, Kansas, strong in the blood of Painter and all the greatest Hereford bulls.

A. Johnson's great herd at Clearwater, Steele Brothers' World's Fair winning herd at Richland, Kans., J. P. Sands & Sons, Walton, Kans., herd. [These gentlemen topped the bull offering last year.] D. Fox & Sons, Atlanta, Kans., whose herd was the leading herd at the Northern Oklahoma Fair in 1905.

AUCTIONEERS: R. L. Harriman, Jas. W. Sparks, L. R. Brady, Wm. Arnold.

J. C. ROBISON, Manager, Towanda, Kans.

February 24, 1906, Breeders' sale of Poland-China bred sows, same place.

Volume XLIV. Number 8

IS THERE A "YELLOW PERIL" FOR THE UNITED STATES?

War in the far East is again strongly suggested by the news from that quarter of the world. The six thousand Americans engaged in Missionary work in China have been reported to be in imminent danger of massacre. Later advices have somewhat relieved the anxiety as to the Americans.

That the adjustment of the differences in the far East effected as a result of the war between Russia and Japan would be permanent has scarcely been expected by thoughtful people. That China would remain dormant after witnessing the inspiring achievements of the valiant Japanese and with the menace of Russia on her long northern boundary was not to be anticipated. It is, therefore, not surprising that Russia has discontinued the homeward movement of her Eastern army pending developments in China.

Persons who have been alarmed about the imminence of the "yellow peril" have hastily suggested that America is about to be involved in a war with China and that the Chinese army will be organized, drilled and commanded by efficient Japanese officers so that they will be formidable adversaries; and that, since China is capable of furnishing practically unlimited numbers of common soldiers while Japan is equally well supplied with the best officers in the world, a prospect of war with this combination is indeed a serious matter.

Let us examine for a moment the probabilities in the case.

For a "yellow" army Japan must, for the present at least, furnish the brains. Japan has a close treaty alliance with England. England is the traditional enemy of Russia as well as the treaty friend of Japan. English influence is therefore very great in Japanese counsels. On the other hand, England's relations with Germany and with France are easily strained, while her dependence for friendship among white peoples is steadfastly with the United States. Japan also has maintained a steadfast friendliness for this country, a friendliness which was strengthened by the uniformity with which American sympathy was with the Japanese during their war with Russia. So, too, China has many reasons for friendliness towards the United States. It was on the initiative of this country that the integrity of China was preserved at the time of the "boxer" uprising.

The danger to China is from Russia. Whether the Chinese are able or unable to comprehend the situation there is no doubt about their alert mentors, the Japs. Dissatisfied with the terms of peace at the conclusion of their great war with Russia, they are shrewd enough to avoid antagonism with other nations and to direct the attention of their protege, the "Celestial Empire," to the menace of Russia.

There appears to be little reason for the Western World to apprehend a "yellow peril" as long as Russia remains the target of the yellow men's antipathy.

A meeting of business men of the Southwest is called to be held at St. Louis April 16 and 17, for the purpose

of discussing plans for the development of this section of the country and making the most effective use of its resources.

SHALL WE SACRIFICE EUROPEAN MARKETS FOR FARM PRODUCTS.

Excessive supplies of cattle in leading markets during the past year have taxed the capacity of stock yards, the

Britain or America if a key to unlock the doors could in any way be found. The common people there are practically without beef at all times! Horsemeat is in frequent evidence. They would feast upon grades and cuts of beef which we are too fastidious to buy. Where we demand a steak or a roast they would be delighted with corned beef or a boiling cut. And as for hams, bacon, sausage, lard, etc., the

beef, pork, etc., have proved unavailing.

The delegates to the National Reciprocity Conference held in Chicago last August representing such bodies as the National Live-Stock Association, the American Stock-Growers' Association, the leading live-stock exchanges, the Chicago and other boards of trade, important mercantile and manufacturing associations, the Shorthorn, Hereford, Aberdeen-Angus and other cattle-growers' associations—in brief, over 200 representative agricultural and commercial organizations, resolved that in their judgment the main trouble was the failure of our Government to carry out the broad statesmanship of Wm. McKinley in the matter of providing vents or outlets for our surplus; and in accordance with the instructions of that important gathering the American Reciprocal Tariff League has been formed for the purpose of presenting that view of the case to Congress and the country; in the hope that through discussion and study of the problem a solution profitable alike to both Europe and America may be reached.

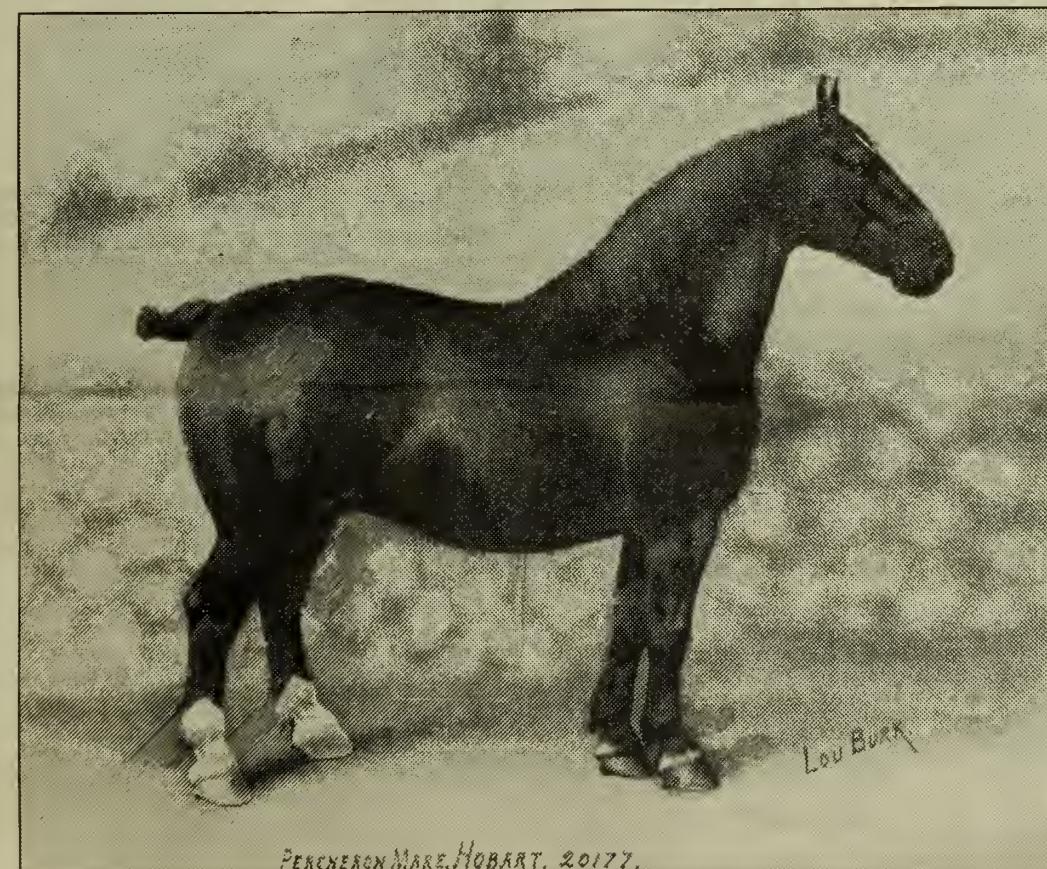

Two interests prevent at this time the accomplishment of this object, the one German the other American; but forces are now in motion on both sides the water that may in time lead to better reciprocal arrangements. The Agrarian landlords in Germany want American farm products kept out. Why? Simply because they are thereby enabled to secure excessive prices for what few sheep, swine, cattle, and grain their soil grudgingly produces. The American "stand-patter" objects to our making any tariff concessions to Germany. Why? Simply because certain highly protected interests here now claim as a vested right a measure of protection which many of them no longer need.

Needless to say, both parties could concede enough to bring about better and friendlier relations, if they would; but will the people of Germany and America insist upon their doing it? That is the whole question in a nutshell. The refusal, thus far of both parties to the controversy, to yield even an inch is driving the two great nations headlong into a commercial war, the results of which none can foresee.

McKinley's dictum that "Commercial wars are unprofitable" commends itself to all conservative business men. Wm. McKinley was an ardent advocate of reciprocity treaties; but as is generally known all his efforts to secure ratification of these were thwarted in the Senate. Twelve separate treaties negotiated under his direction failed of ratification and Section 4 of the Dingley Bill under which he acted has now expired by limitation. Some have proposed a revival of this reciprocity section of the existing law at this session of Congress, but it is said that the Senate is still hostile to the treaty idea. What then can be done?

Write to your member of Congress, write to both Senators from your State and get your neighbors to do the same. Ask them to take this question up and study it. Suggest that this business should be settled upon a basis of mutual concession; not with clubs.

If a maximum and minimum law is to be passed based upon existing sched-

PERCHERON MARE, HOBART, 20177.

A FOUR-TIME WINNER AT KANSAS FAIRS.

The property of F. H. Schrepel, Ellinwood, Kans.

Ingenuity of salesmen, the resources of distributors and the purses of producers. Particularly is this true of the lower and medium grades constituting the great bulk of the supply. The question of markets is one, therefore, having peculiar interest to all parties concerned at the present time. Slaughterers have apparently made every effort to stimulate the home market: the average price received for dressed beef at wholesale during 1905 at Chicago being only about 6½ cents per pound. The shipping and export (English) demand helps to make a clearance of the better grades, but the question of what to do with the flood of grass and short-fed cattle from farm and range becomes more perplexing year by year.

The English market gives us an enormous outlet for the better grades of live-stock; our annual sales of feedlot products to London, Liverpool and other British cities aggregating nearly \$150,000,000. But for this our Western feeders would indeed be in hard lines, because the surplus of this industry is so stupendous that the home market alone is powerless to absorb it at a price that would admit of the feeding of high-priced corn upon high-priced land, at any profit. Even here, however, we will have to look closely to our laurels, as Argentina is becoming a more dangerous competitor in Great Britain each recurring season.

Continental Europe would afford a vast outlet for the very class of meats most difficult to find a market for in

product of literally millions of corn-fed hogs could be marketed in France, Germany and contiguous countries if a way could be found through the custom house.

None except those who have studied the situation abroad have any adequate conception of what daily commissions in our leading markets from Paris, Hamburg, Bremen, Berlin, Vienna and other great Continental centers of population would mean to the farmers and feeders of agricultural America. And, on the other hand, only those who know personally the comparative scarcity of good bread and meat on the Continent can appreciate fully what a blessing such an American "invasion" would be to the masses of people.

Is there not some way whereby the European consumer and the American producer can be brought in touch? Possibly not; but as our exclusion is a matter of hostile tariffs, the least we can do is to study the question carefully and see if some way can not be figured out of bringing the groaning granaries and glutted cattle-pens of the West within reach of the poorly-fed millions of the old world. It is understood that Germany is in a mood to treat with us with a view towards averting a commercial war, and it is only a few years since France approved of a treaty which would have allowed us to sell her some \$25,000,000 of agricultural products annually; but thus far all efforts to secure these European outlets for our corn, wheat, oats, hogs, cattle, dressed

beef, pork, etc., have proved unavailing.

ules, the present duties should be the maximum and a level at least 20 per cent below established as a minimum.

Any further increase in rates is absurd and will only make matters worse.

VARIETIES OF FRUITS.

Editor Kansas Farmer: Can I get a horticultural report that gives a list of apples, cherries and peaches best suited for this part of Kansas? Also we want a treatise on grape culture. We particularly want a list of hardy peaches.

Morris County. J. F. BACON.

Prof. Albert Dickens, horticulturist of the State Agricultural College, furnishes a list as follows:

Apples:—Early Harvest, Benoni, Cooper, Maiden's Blush, Jewell, Grimes, Jonathan, Winesap, Missouri Pippin, W. W. Permain, Huntsman, York Imperial.

Plums:—Burbank, Wildgoose, Weaver, Abundance, Pottawatomie, Wolf, Wayland, Lombard, Robison, Quaker, Damson.

Currants:—Black—Crandall, Jelly Red—Red Dutch, Versailles.

Peaches:—Triumph, Champion, Mt. Rose, Mamie Ross, Alberta, Crasly, Family Favorite, Salway, Hiley, Belle of Georgia, Bonanza.

Strawberries:—Aroma, Clyde, Crescent, Excelsior, Gandy, Parker Earl, Senator Dunlap, Warfield, Bubach, Haverland.

Blackberries:—Early Harvest, Snyder, Taylor, Merserean.

Apricots:—Moorpart, Early Golden.

Pears:—Kieffer, Lincoln, Duchess, Bartlett.

Grapes:—Green Mountain, Moore's Early, Worden, Concord, Woodruff Red, Wyoming Red, Lutie, Catawba, Brighton, Brilliant, Diamond, Elvira, Agawam.

Gooseberries:—Houghton, Downing.

Cherries:—Sweet—Gov. Wood, Doubtful. Sour—Early Richmond, Montmorency, Dyehouse, Wragg, English Morello.

Red Raspberries:—Louden, Thwack.

Black Raspberries:—Kansas, Cumberland, Queen of the West.

Some of the old favorites of the commercial orchardist, such as the Ben Davis, will be missed from Professor Dickens' list. A judicious selection would consist of very many more of some varieties than of others. Thus, in apples one would need but few of each variety named in the list until Maiden's Blush is reached. Even here it should be remembered that this is a summer apple. Grimes is an excellent fall and early winter apple. Its quality is unsurpassed. It keeps fairly well in cold storage, but in the absence of cold storage must be used by midwinter. Jonathan is unsurpassed for quality, has a splendid red color, is just the right size for eating out of hand, and keeps perfectly in cold storage. Without cold storage it is a fall and early winter apple. Winesap, Missouri Pippin, and York Imperial do well in Kansas, are good keepers, and generally profitable.

In making selection much will depend upon whether or not cold storage is available. With cold storage plant many Jonathans. Without it let Ben Davis take the place of a considerable portion of the Jonathans.

If our correspondent will write to the Kansas Farmer a statement of the extent of his proposed plantings and whether he will use cold storage we will endeavor to obtain more explicit suggestions as to desirable proportions of the several varieties.

STUDENTS' AGRICULTURAL ASSOCIATION.

The Agricultural Association of the students of the Kansas Agricultural College numbers about 350 members, and is composed of energetic young men who are endeavoring to build up the best agricultural interests of the State. They meet regularly once a week and discuss all the leading topics pertaining to agriculture. They are publishing a paper called "The Agricultural Review," which is ably written and has a large circulation throughout the State. It is hoped that its influence will be felt and that it will lead to the rapid advancement of dairy and agricultural interests.

The following is a report of the last meeting, held February 10:

"At 2.30 we were promptly called to order by our vice-president, Mr. Hull, in the absence of President Snodgrass. After roll call and invocation by Mr. Greenough, the minutes of the previous meeting were read and approved. We were then glad to welcome into membership Messrs. Morris and Shipley, the latter gentleman being initiated. We then had the pleasure of listening to a very interesting talk on 'The Most Profitable Education for the Young Man,' by our elder member, J. J. McCrea. 'The Advantages of Kansas as a Dairy State' was interestingly discussed by J. M. Cook. Professor Melick then

gave a practical and instructive talk on 'The Dairy Cow and Her Origin, and Some of the Practical Problems of the Kansas Dairymen.' E. W. Cudney rendered a short but interesting declamation, followed by a reading by our 'chore boy,' Ralph Cooley.

"After being criticised for our misdeeds and complimented on our good points, we went into a lively business session, and then adjourned."

RURAL ROUTES ON ESTABLISHED ROADS ONLY.

EDITOR KANSAS FARMER:—Will you please answer the following question through the "Old Reliable?"

Do all roads have to be laid out by petition before a rural route can be established over such roads? Please answer as soon as possible as we are anxious. J. A. B.

Ford County.

The Postoffice Department establishes rural free delivery routes on roads legally laid out, located and opened and on no others.

The laws under which roads are legally laid out, located and opened in Kansas are contained in chapter 154 of the General Statutes. These laws provide for a petition by not less than twelve householders of the county residing in the vicinity where the road is desired. This petition is to be accompanied by a bond of one or more persons guaranteeing to the county the expenses of proceedings in case the road shall not be finally established. The petition and bond are presented to the Board of County Commissioners, who give twenty days' notice and appoint viewers. The county surveyor, on request, meets with the viewers. Provision is made for condemnation proceedings and payment of damages where necessary to secure the land over which the road is to be established.

It will be well for those interested to read carefully chapter 154 of the Kansas Statutes. Each justice of the peace is furnished a copy of these statutes at the expense of the State.

TO DESTROY RATS.

EDITOR KANSAS FARMER:—Our barn is literally full of rats. Can you tell me some way to rid the place of them before the pests increase again; also before time for little chickens? R. O.

Stafford County.

A few good cats kept at the barn and given a little milk each morning and evening will be found the most efficient remedy for rats. The prairie-dog poison furnished by the Agricultural College is also good.

The Secretary of the Interior has signed the papers authorizing the commencement of work on the irrigation enterprise near Garden City, Kans. This means the expenditure of something more than a quarter of a million dollars in this kind of development. The underflow water will be pumped into the irrigation ditches.

THE IMPLEMENT BLUE BOOK.
The Midland Publishing Co., of St. Louis, Mo., has just issued the third annual edition of the Implement Blue Book, a complete and accurately compiled directory of agricultural implements and machines, showing in detail the goods of every manufacturer in the United States and Canada, supplemented by a full list of jobbing and branch houses at all the principal distributing points. The Blue Book for 1906 contains 448 pages, 6 by 9 inches, handsomely bound in blue cloth, blue embossed, and was published for the exclusive use and benefit of dealers in agricultural implements with whom it is the standard of the world. The company has on hand a few hundred copies which it is sending out upon receipt of 20 cents to pay for packing and postage.

Defeats the Rats.

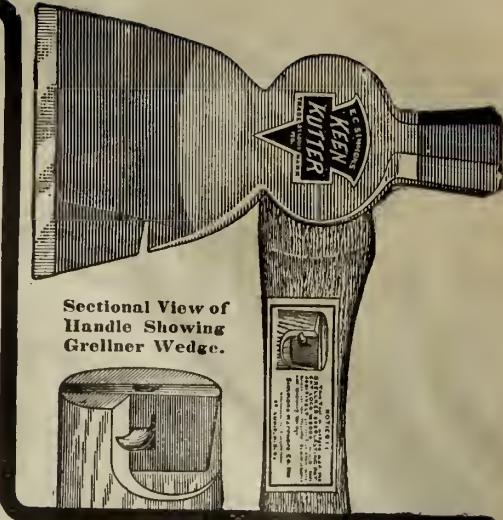

EDITOR KANSAS FARMER:—In your issue of February 8, F. H., of Osborn County, makes inquiry about cement foundations, and I observe your comment in regard to the rat problem. I wish to give your readers my plan for barn foundation.

I have the past year built a barn 37 by 41 feet, rat-proof, which holds about 30 tons of hay overhead. I used 6 by 6 posts and wherever I wanted a post I dug a hole about 2½ feet square and 14 to 16 inches deep. In order to save concrete I used flat rock in the bottom of the holes and leveled up with concrete; then used any kind of rough rock, filling in with concrete until I had the desired height, leveling all up per-

Long Lived Tools

Keen Kutter quality tells in the long life of Keen Kutter Tools as well as in better work and greater satisfaction. It is not an unusual thing for Keen Kutter Tools to be passed down from father to son, so long do they last.

The long life of Keen Kutter Tools compared with the short term of service of inferior brands makes Keen Kutter Tools by far the least expensive tools that you can buy. The

Sectional View of Handle Showing Grellner Wedge.

KEEN KUTTER

trademark covers every kind of tools so that you may always be sure of highest quality by insisting upon Keen Kutter Tools.

An example of the Keen Kutter excellence is found in Keen Kutter Hatchets and Handled Axes. These are made of the highest grade of steel, on the most approved lines, and by the best workmen. Every Keen Kutter Hatchet and Axe has the handle wedged with the Grellner Patent Everlasting Wedge which positively prevents the head ever flying off or working loose, and is sharpened ready for use. These are exclusive Keen Kutter features.

Some of the other kinds of Keen Kutter Tools are: Axes, Adzes, Draw Knives, Saws, Tool Cabinets, Scythes, Hay Knives, Grass Hooks, Brush Hooks, Corn Knives, Eye Hoes, Trowels, Pruning Shears, Tinner's Snips, Scissors, Shears, Hair Clippers, Horse Shears, Razors, etc., and Knives of all kinds.

If your dealer does not keep Keen Kutter Send for Tools, write us and learn where to get them. Tool Booklet

298 Broadway, New York.

flectly. Then I made 3 pyramidal molds, 20 inches square at the bottom, tapering to 6 inches at the top (inside measure), set the molds in line on center of pillars, then poured in a layer of cement. I used a layer of small rock (to save concrete), filling alternately with small rock and concrete until within about 4 inches of the top of mold. Then I placed a round stick, about 1½ inches in diameter, in the top of the mold and packed concrete around it until the mold was full. When it became set (not too solid), I would shake the stick a little and lift it out. When the concrete became firmly set I would lift the mold off and proceed as before until all was complete.

For the outside wall I took six-inch fencing boards and cut them, beveling to fit in between these pyramidal-shaped pillars, and set them 4 inches apart, and level with the top, first having filled in between the pillars with dirt well pounded down, then placed small, flat rocks under these boards (carefully fitted in so as to leave no holes), extending out 4 or 5 inches on either side. A layer of cement could be used if flat rock could not be had. I then filled the molds formed with these fence boards the same as the pillars. The object of this projection is to keep the rats from under the foundation. When a rat starts to dig under the foundation, he commences up against the foundation and goes down under, but in this case he will not dig straight out and then down but will turn and go along the wall. He may go clear around the barn but can not get under the foundation if care has been used. If he happens to get inside through some door, he will not get under the foundation.

I used no sills in my barn, but bored holes in the end of the 6 by 6 posts, taking old cultivator arches and cutting dowel-pins 10 inches long and driving them in the ends of the posts, leaving 4 inches out, and set the ends of posts on the pillars with dowel-pins in holes of pillar. I have no cross-walls—just pillars wherever I have a post. The door-posts are fixed the same way, only using smaller posts and smaller pins. My barn is raised 10 to 18 inches above the ground, filled inside and graded outside to top of pillars. I have no sills to hold water on the foundation and rot, as many barns that I have seen have. M. W. EBY.

Franklin County.

The fight of oleomargarine for a place and a name is not yet ended, as witness the following from a writer in the Delineator: "Oleomargarine has been misrepresented to the public to a greater extent probably, than any other article of food. From the time

of its first appearance in the market as a competitor of butter, there has been a constant attempt to create and foster a prejudice against it as an unwholesome article made from unclean refuse of various kinds, a vehicle for disease germs, and a disseminator of tape-worms and other unwelcome parasites. It has been said to have been made from soap grease, from the carcasses of animals dead of disease and from a variety of other articles equally unadapted to its manufacture. The publication of a great mass of untruth can not fail to have at least its desired effect, not solely on the minds of the ignorant but even on those of persons of more than average intelligence. So a prejudice was created against this valuable food product, but it is becoming gradually less pronounced."

Farm Experience in Southeast Kansas.

Editor Kansas Farmer:—As I promised a year ago that I would write again of my farm experience, I will do so now. First I had tried to get a stand of Bromus Inermis, having spent about \$50 for seed at three different times. I got seed from a grower in South Dakota. When I wrote two years ago I thought I had a tolerably fair stand, but had sown some redtop seed on the ground in February. Quite a lot of the Bromus Inermis headed out, and I moved it, as there were many weeds in it, and thrashed it. I sowed the seed on the same patch—about 14 acres of rather thin land. Last year I expected to have a fair stand as it is claimed to thicken up as it becomes older; but to my surprise, last summer there was scarcely a spear of it, while there was a good stand of redtop. What killed it? I do not know. I had no trouble to start the seed, but it appears to die out when an inch or two high; but the last time I thought sure I had it started. It does not seem to be adapted to Southeastern Kansas. I believe redtop much better for this country on up or low land, as you can sow it on old worn-out pasture without breaking the sod. I had fairly good success with English blue-grass, timothy and clover.

Last spring, March 13, I sowed fourteen acres of oats. I drilled them in fall-plowed land. About the end of April we had a dry spell. The oats looked bad. I took a four-section harrow, weighted it down and harrowed crosswise. Then took an iron roller with light harrow hitched to it and went over it again, covering it almost completely. My neighbors said "You have ruined your oats; you have harrowed them all out of the ground." I told them to wait and see. In a week they had recovered and made a fine growth. They made a little over 40 bushels to the acre. Most of my neighbors' oats only made 20 bushels—some 30, and mine weighed 35 pounds to the bushel.

As soon as I could get the oats out of the field I plowed the stubble, and on July 3 I planted a part of the field in cow-peas, and the balance on July 15. They made a fine growth. I drilled them in about three or four inches deep with a corn-planter, using medium sized plates, and double-rowed them. They nearly covered the ground. That way a bushel will plant nearly four acres. I planted them for the benefit of the soil, not expecting them to get ripe, but they grew about 18 inches high, got well ripe before frost, and were white with pods. I was puzzled to know how to cut them to save them. I hit on the idea of using a self-rake, and found it worked all right, only I did not have the ground quite smooth enough, the big platform sometimes dragging on the ground. The self-rake is just the thing to cut them with when planted this way, but the ground should be rolled and harrowed crossways after planting, and the dead furrows plowed shut, so as to leave the ground as smooth as possible. This must be done soon after planting, as they will be up in three or four days. They require but little moisture.

After they were cut I bunched them the same as flax. I intended to thresh them out of the field, but we had a month of wet weather with rain every few days. When they were dry I could not get on the ground with a team. I turned them two or three times so they would not rot, and was surprised to find that though the rain went through them they were in good shape. In November I tried to thresh, with separator, but this broke them all up, so we stacked them. There were about 18 good loads on the 13-acre patch. I intend to tramp them out with horses, when the weather and ground permit.

I then turned nine calves on the patch—lost three by bloat. I think they did not go to water as they should. One stormy evening when I put them in the barn I saw one was badly bloated. I took a little turpentine and applied at naval, making it wet six inches around. To my surprise the calf was well in the morning. Three weeks ago I turned the milch cows on the field and in two days time their milk increased to double the amount. It looked as though they were grazing on grass—picking up every pod and some stubble. I think they would have made ten to fifteen bushels of peas per acre. I am sure they will raise the fertility of

the soil to produce ten to twenty bushels more per acre. I believe they will make more peas if planted late, as they will ripen evenly if planted that way. If planted early, they run more to vines and blossom and ripen along until frost. Mine were the Whippoorwill variety. Four inches from the ground they spread out, and if the ground is smooth they can be cut that low. If the rows are straight, it will help much in cutting them. It will pay to raise them whether you cut, pasture, or plow them under. You can not raise a better crop for milch cows; there is nothing better to fatten sheep—all stock is fond of them, and they are worth millions in raising the fertility of the soil.

Kansas seed-houses want \$2 per bushel for the seed; but in Southwest Missouri you can get them for less. For the benefit of the Kansas Farmer readers I have asked them to advertise in your paper. We have so much wornout land, that needs to be built up, and cow-peas will do it cheaper than anything else, and without losing any other crop.

J. RUFL.

Neosho County.

Alfalfa Bacteria—Rust Proof Oats.

Please let me know if you have had any experience with alfalfa bacteria and what results. Is there such a thing as rust-proof oats?

EDWARD JONES & Co.

Marion County.

We have made no direct experiments in inoculating alfalfa with the bacteria which grow on the roots of that plant. These bacteria appear to be always present in the soils of the station farm and we do not have to supply them. I enclose article on nitro-culture which may give you some information.

There is no such thing as rust-proof oats, so far as I know. Some varieties of oats do not seem to be so badly affected by rust as others, but I observe that the tendency to rust varies with different varieties in different seasons. A variety of oats which does not produce too rank a growth of straw and which matures early is usually less affected by rust than the ranker growing, later maturing varieties. The Sixty-Day oats and Kherson oats being of the early-maturing class have appeared to be less affected by rust in the experiments at this station than other varieties. Perhaps the Texas Red is also more or less exempt from rust in an average season.

A. M. TENEYCK.

Alfalfa in Western Kansas.

I want to sow alfalfa this spring. Will it do out in this country? The soil is black and a little sandy but not enough to speak of. How must I prepare my ground? I thought I would plow it now and harrow occasionally until spring.

FRANK WINTER.

Pawnee County.

I have requested Prof. J. T. Willard, acting director of this station, to mail you a copy of bulletin 114 giving information regarding seeding and culture of alfalfa.

You ought to be able to grow alfalfa successfully in Pawnee County. It would have been well if you had plowed your land early last fall if you intend to plow it and your plan of frequent cultivation previous to seeding is a good one. It is necessary to put the ground into a fine seed-bed condition in order to insure a catch of alfalfa. Perhaps you have a piece of corn-stubble land or land which grew cultivated crops last year, which has not been plowed. If you have such land—not too weedy—a good seed-bed for alfalfa may be prepared by disk and harrowing. Sow quite early in the spring, as soon as the ground is in fit condition to sprout the seed.

A. M. TENEYCK.

Cow-Pea Questions.

I would like to sow cow-peas this spring. How early should I sow, and how am I to tell when the seed is ripe? Can I take that seed and sow it in the fall as a fertilizer? Would it be best to plow the peas under or let them stand till spring?

WILLIE WIEMERSLAGE.

Lincoln County.

Cow-peas should be sown about the middle of June in a well-prepared seed-bed. It is well to plow ground quite early in the spring and cultivate it several times before planting in order to destroy the weeds and prepare a firm, well-settled seed-bed. If you wish to grow cow-peas for seed, it is best to plant in rows $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart and cultivate much the same as you would corn. When sown broadcast or in close drills, cow-peas grow more upright and make excellent forage but produce comparatively few pods and peas. Grown in this way the crop may be cut

with the mower and saved for hay; but when grown in rows for seed it is usual to harvest with the bean harvester or pull the peas, since the vines lie so close to the ground that they are not readily lifted and cut with the mower.

Cow-peas ripen very unevenly; you will find ripe pods, green pods and blossoms on the vine at the same date. The peas are not easily shattered and the best plan is to wait until most of the pods are ripe when the crop may be harvested and placed in bunches or left in windrows to cure in the field. This usually requires several weeks, when the peas may be thrashed. The usual method is to use the ordinary grain-separator, but this method of thrashing splits the peas badly, and if your plan is to produce peas for seed rather than for feeding, those which you expect to save for seed had better be thrashed by hand, unless you have a bean thrasher. This is not nearly as difficult an undertaking as many farmers seem to think. A good crop of cow-peas will yield 15 to 20 bushels of seed to the acre and a man may readily fall out an acre or two of peas in a day.

You could not use the seed produced next season for fall planting; usually the peas would not be thrashed before the middle of October. It is necessary, therefore, to save seed from the previous year's crop for late summer or fall planting.

When used as a fertilizer, the peas may be either plowed under as green manure, taken off for forage, pastured off with cattle and other stock, or when used as a catch-crop on wheat-stubble or in corn, the peas may be left as a cover-crop during the winter, furnishing also some fall pasture. The greatest benefit may often be secured by plowing the peas under green, provided a suitable crop is planted the next season. Corn follows cow-peas, used as green manure, very well, but it is not advisable to plow under a crop of cow-peas and seed to wheat the same fall, or even to sow small grain the next season because of the loose, open condition of the seed-bed. I have mailed to you a circular letter which gives further information regarding the growing of cow-peas and their use as a fertilizer.

A. M. TENEYCK.

Artichokes—Spelt.

In last week's Kansas Farmer I notice you have seed-corn and other kinds of seeds to sell. Will you kindly mail catalogue and price list of your seeds?

Have you had any experience in growing artichokes for hogs and other stock? If so, what do you think of them? I notice two kinds advertised in the seed books, Large Mammoth White and Jerusalem. Which is the better variety?

Have you had any experience in growing spelt or emmer? Is there much of this grown in Kansas? Does it do well here? So far as you know what is a fair average yield per acre on good land, when the season is reasonably favorable? Is it a good, strong, healthful feed for milch cows, horses, hogs, etc? Have you any good spelt for seed to sell?

I am anxious to find out all I can from reliable sources in regard to artichokes and spelt. It seems to me that both are very valuable to the farmer and stock-grower and ought to be on nearly every farm.

HENRY S. JEFFERIES.

Franklin County.

I have mailed circular giving information regarding seed-corn and other seed grains, with prices. I published an article giving information regarding the culture and feeding of artichokes in the issue of the Kansas Farmer December 14, 1905. I am not acquainted with the Large or Mammoth White variety. I have only grown the Jerusalem artichokes. The latter variety is the one commonly grown and is standard.

I have sent to you a copy of a circular letter giving information regarding spelt or emmer. The acreage of emmer grown in Kansas is not large, although it is grown to some extent throughout the larger portion of the State. Emmer would not succeed so well in your county as it does in Central and Western Kansas, or even at this station. A fair average yield of emmer in this section of the State is 35 bushels (45 pounds per bushel) per acre. The average yield of emmer at this station for the past three seasons has been greater than the average yield of oats or barley.

In composition emmer is similar to barley, although in feeding-value some experiments conducted at the South Dakota Experiment Station indicate that it is hardly equal to barley as a fattening feed. If the grain is ground and mixed with other ground grains, it

Dietz Lanterns

We know that if buyers would first write us and get our lantern book and know just what service Dietz lanterns give and how they are made, they would never buy any other kind. Everybody knows about the

"Clear, White Light of the DIETZ."

But we want them to know about the convenient side lever, how impossible it is for the oil pot to leak, how it is made without suspicion of solder, how only the best class of material, glass, tin, wire, etc., is used in the making. There are a dozen things that ought to be considered in choosing. Then dealers could not persuade you to buy the ordinary lanterns on their shelves. There's a Dietz lantern dealer most everywhere. If you don't find one, write to us. Write anyhow for that free book.

may make a good ration for dairy cows or horses, and for growing hogs.

We have seed of emmer for sale, as stated in the circular which I have mailed you. You can also secure seed of almost any Western seed company.

The article regarding the improving of sweet corn, which you read in the Kansas Farmer was probably written by a member of some other experiment station. However, for answer on this point I shall refer your letter to Prof. Albert Dickens, horticulturist at this station.

A. M. TENEYCK.

Yellow Alfalfa—Seed-Corn.

I own a farm in Kansas near Courtland, Republic County, which I bought eighteen months ago. I have had it rented till now, but intend to make my home on it from now on. It is a good quarter section, but like most land around there has been "corned" to death for twenty-five years. I have seen some of your articles and would like to be on your mailing list when I get home. The reason I write now is to ask a favor of you. Would you kindly give me the address of some reliable man who has a few bushels of soybeans for sale? I want the beans for seed. I am going to try the crop on about five acres this spring. I intend to sow broadcast and cut for fodder shortly after the plants start to form the first pods. Is that a good way? I am not so particular to get the fodder as to enrich the soil, as I have lots of alfalfa. Please tell me what you think best.

I had my renter put in an additional 10 acres of alfalfa this last spring, in May. The soil was fall-plowed, and he harrowed it and then seeded it, then harrowed it again. It came up in splendid shape, and grew well until it had four leaves, then stopped. We had much rain last summer but the alfalfa turned yellow and just stood that way, not growing any more except a few patches here and there. I took a trip home about August and examined the ground and found that it had been fall-plowed when the weeds were very high, and they formed a regular "mulch" 4 or 5 inches below the surface. When the alfalfa roots reached the mulch they either got heated or for some other cause did not penetrate the subsoil. I have only a very poor stand here. Would it not be all right to sow seed this spring and disk it? I would like to have that particular field in alfalfa for a while. Have you any good seed-corn for sale? I would like to get some from you. Do you know any one that has large, white, seed-corn for sale?

Alaska. CHAS. ANDREN.

I have requested Prof. J. T. Willard, director of the station, to place your name on our bulletin mailing list and send you some of the recently published bulletins.

I can not give you the address of any farmer who has soy-bean seed for sale, but you can purchase the soy-beans from Western seed dealers, or we can supply you with a limited quantity of the early yellow soy-beans, the variety commonly grown in this State.

I would not recommend to grow soy-beans for fodder. Cow-peas are preferable to soy-beans if you intend to sow broadcast or plant in close drills and harvest the crop for hay or fodder. The Whippoorwill cow-peas are commonly grown in this State, and seed may be secured from seed companies. We have a limited supply of New Era cow-peas which we are selling at \$2.50 per bushel. These peas are a little earlier than the Whippoorwill and may be preferable for seed, but do not make quite so large crops of forage as the Whippoorwill. If you prefer to sow soy-beans for forage, I recommend that you plant some late-maturing variety such as the Southern, late Green, Large Yellow or the Flat Black. I have mailed to you a copy of letter answering questions regarding cow-peas for forage and green manuring.

If the alfalfa is now very thin on the ground, it is possible to thicken the stand by seeding early in the spring and by disking and harrowing to loosen the soil so that the seed may be covered. If you fail to get a renewed stand by spring seeding, it is well to seed immediately after taking off the third cutting, disking and harrowing the alfalfa-field in order to prepare a favorable seed-bed. As a rule, unless it is especially desirable to have a certain field in alfalfa, I would prefer to seed down other land and break up the field which has the poor stand, planting again to corn or other crops. The next time you sow alfalfa you should take care to prepare a proper seed-bed; see that the soil is well settled and firm, and that the furrow slice is well united with the subsoil, so that the soil moisture may come up from the subsoil and the roots of the alfalfa may have a fa-

vorable environment for spreading and growing deep in the soil.

We have some good seed-corn for sale. I have mailed circular giving information regarding seed-corn and other seed grain. We have no very large white corn. Geo. T. Fielding & Sons, Manhattan, grow and sell the Mammoth White Dent corn, a late maturing corn which has large ears and which has produced well in the tests of this Station. McAuley's White Dent corn, seed of which we have for sale, is medium late in maturing and has medium-sized ears. The Boone County White is similar to the McAuley.

A. M. TENEYCK.

Flax with Grass-Seed.

I would like information regarding the sowing of flax with grass-seed, will the grass do well sowed with flax?

Necosho County.

S. L.

As a general rule, I would not advise to use flax as a nurse-crop in sowing grass-seed. In certain sections of the State where the moisture supply is abundant this method of seeding down to grass may succeed fairly well, but usually throughout Central Kansas and in a large portion of Eastern Kansas it is safer to sow grass, alfalfa or clover without a nurse-crop. In a test of different nurse-crops for seeding grass and clover at the North Dakota Experiment Station it was found that flax gave about as good results as other spring-sown grains. Thus, where the conditions are favorable to use a nurse-crop in seeding to grass, doubtless the grass will succeed with flax nearly as well as with wheat, oats, or other small grain.

A. M. TENEYCK.

Corn-Stalk Ground for Alfalfa.

I want to sow ten acres of alfalfa this spring. The ground that I want to put the seed on is corn-stalk ground, with some burrs and weeds, but the ground is a mellow loam. Please tell me what preparation I ought to make before sowing and after, and how much seed to put on, and if the last of March is the right time to sow, providing the weather permits.

J. M. WALTERS.

Dickinson County.

I think if you will disk and harrow the land in question that you will be able to prepare a good seed-bed for sowing alfalfa this spring. The cockleburrs are not necessarily bad weeds in a field of young alfalfa, provided the weeds are mowed occasionally and kept from growing too rank and shading the young alfalfa plants. If the corn-stalks are still on the ground you could break them down, rake them up and burn them, but the stalks may be cut up with a stalk-cutter and left on the ground. We seeded a field last spring this way and secured good results. The stalks on the ground acted as a cover to break the wind, conserve the soil moisture, and prevent the ground from puddling and baking by heavy rains. The corn-stalks bother some when the alfalfa is cut and raked the first time, but usually there is little growth of alfalfa the first season, and because of the presence of weeds it is not usually saved for hay. But the second year the corn-stalks have largely disappeared.

No treatment needs to be given the land after sowing other than a single harrowing to cover the alfalfa-seed if it is sown broadcast. Twelve to fifteen pounds of good seed per acre is sufficient to sow. Last spring we sowed on March 15 with good results. It depends somewhat upon the season and weather conditions as to what date you should sow. Usually I recommend early seeding, as soon as the soil is in fit condition to sprout the alfalfa seed. There is some danger of late frosts injuring early-seeded alfalfa, but the danger from frost by early seeding is not so great as the danger of damage from heavy rains and hot sun to late-seeded alfalfa.

A. M. TENEYCK.

Kherson Oats—Cow-Peas.

Will you please tell me what you think of Kherson oats. Is it a good variety and where may I secure seed? Can I raise cow-peas for seed here? When should cow-peas be sown and how much will the crop yield per acre? How are the peas harvested? Can they be cut with the grass mower?

JACOB J. HUBERT.

Marion County.

I have mailed circular giving information regarding seed-corn, including varieties of oats tested at this station. You will observe that the Kherson oats have stood second in yield as the average for three years' test. Some twenty different varieties have been grown in these experiments each year. I believe either the Kherson or Sixty-day oats will prove to be better producing oats throughout Central Kansas than almost any other variety unless it be the Tex-

as Red. I would advise that you try the Kherson oats in a small way. Seed may be secured from this station at \$1.25 for a single bushel or six bushels for \$5, with extra charge for sacks. The Kherson oats are also sold by Western seed companies.

Certain varieties of cow-peas may be grown and matured successfully for seed in Marion County. Such varieties as the New Era, Whippoorwill, Black-eye, Lady, Wonderful, and Warner's Early. You can secure seed of one or more of these varieties from Western seed companies. The Whippoorwill is the standard variety sold and grown in this State. We can supply you with a limited quantity of seed of the New Era cow-peas, an early maturing sort and a good producer of grain, price \$2.50 per bushel.

I have mailed circular letter giving information regarding the culture of cow-peas. Briefly answering your questions directly: When sowing for seed, cow-peas had best be planted about the middle of June on a well-prepared seed-bed, in rows 2½ to 3 feet apart, dropping the peas 1 to 2 inches apart in the drill-row. Planted in this way the peas will vine and some of the vines lie on the ground, making it necessary to harvest the peas with a bean harvester; or they may be pulled by hand and put in small bunches, as is practiced in harvesting beans. When the bunches are thoroughly cured the peas may be hauled to the barn and thrashed with a flail if the purpose is to save the grain for seed. For feeding purposes the peas may be thrashed with an ordinary grain-separator. A thrashing-machine, however, breaks the peas badly and injures them for seed. If the cow-peas are planted in close drills or sown broadcast, the plants grow erect and the crop may be readily cut with a mower, but when grown this way the peas do not seed well and I would only recommend this method when you wish to harvest the crop for hay.

A. M. TENEYCK.

Smut in Wheat.

I live in Brown County, Kansas, but I own a section of land in Sheridan County, which is farmed by a tenant. Last year I furnished enough macaroni to sow 50 acres, and when harvest-time came, fully one-fourth of it had what is called stinking smut in place of sound grains. I have been told that the seed can be treated to prevent that. If you will kindly publish the formula in the KANSAS FARMER, I will appreciate it.

ANTONIO SCALAPINO.

Brown County.

It is true that seed wheat may be successfully treated so as to destroy smut and give practically a clean crop from smutty seed. The best remedy for smut in wheat is to treat the seed with a solution of formaldehyde, using one pound 40 per cent strength of formaldehyde to 45 to 50 gallons of water. Either spray the wheat or dip it in a barrel or tank, taking care that the grain be thoroughly wet, then spread it quite thinly over the floor and allow it to dry from twelve to twenty-four hours, shoveling it over once or twice. The usual method is to treat one day the seed that is to be sown the next day. The wheat will swell, and in order to sow the required amount per acre the drill should be set to sow about 1-5 to 1-4 more than the usual amount.

The purpose of this treatment with formaldehyde is to destroy the smut spores which adhere to the wheat kernels. When smutty wheat is thrashed the smut grains break and the fine smut dust, which is really the seeds of the smut is spread over the sound kernels of wheat. Some of these little smut seeds or spores adhere to the wheat kernels and when such wheat is planted these spores sprout and the fungus plant grows into the wheat plant, the smut plant feeding on the sap and tissues of wheat plant, finally producing the smut in the head of the wheat in place of the wheat kernels. If these smut spores adhering to the wheat grains are destroyed, there is little chance for the smut spores which remain in the soil to come in contact with the wheat kernels or the young growing wheat plants, hence the seed-wheat treated with a solution of formaldehyde produces a crop which is practically free from smut.

There is no danger of injuring the seed by using formaldehyde of the strength of solution described above. In fact, experiments have shown that the treatment actually improves the wheat. As an average for a large number of experiments at the North Dakota Experiment Station, Prof. L. H. Bolley found that treating sound wheat free from smut with the formaldehyde solution, gave increased yields as compared with the untreated seed by over two bushels per acre. Every

Nervous Women

Their Sufferings Are Usually Due to Female Disorders Perhaps Unsuspected

A MEDICINE THAT CURES

Can we dispute the well-known fact that American women are nervous?

How often do we hear the expression, "I am so nervous, it seems as if I should fly;" or, "Don't speak to me." Little things annoy you and make you irritable; you can't sleep, you are unable to quietly and calmly perform your daily tasks or care for your children.

The relation of the nerves and generative organs in woman is so close that nine-tenths of the nervous prostration, nervous debility, the blues, sleeplessness and nervous irritability arise from some derangement of the organism which makes her a woman. Fits of depression or restlessness and irritability; spirits easily affected, so that one minute she laughs, the next minute weeps; pain in the abdominal region and between the shoulders; loss of voice; nervous dyspepsia; a tendency to cry at the least provocation.

Nothing will relieve this distressing condition and prevent months of prostration and suffering so surely as Lydia E. Pinkham's Vegetable Compound.

Mrs. M. E. Shotwell, of 103 Flatbush Avenue, Brooklyn, N. Y., writes:

"I cannot express the wonderful relief I have experienced by taking Lydia E. Pinkham's Vegetable Compound. I suffered for a long time with nervous prostration, backache, headache, loss of appetite. I could not sleep and would walk the floor almost every night."

"I had three doctors and got no better, and life was a burden. I was advised to try Lydia E. Pinkham's Vegetable Compound, and it has worked wonders for me."

"I am a well woman, my nervousness is all gone and my friends say I look ten years younger."

Will not the volumes of letters from women made strong by Lydia E. Pinkham's Vegetable Compound convince all women of its virtues? Surely you cannot wish to remain sick, weak and discouraged, exhausted each day, when you can be as easily cured as other women.

SEED CORN

There are many points to be considered in selecting seed corn; some of the most important are outlined in the above cuts; namely, well filled out at butt end with small to medium sized shank; the tip of ear well capped or covered over with fair sized grains; the kernels should be wedge shaped from cap to where it rounds off at point or germ end, and the rows should be close together but still not so tight as to smother the germ and cause mold. The grain must be deep and set on a small cob which is of such texture that it will dry out easily and quickly. These points are all brought to perfection in the new

GOLDEN WEST

It is the most desirable, large, bright yellow corn ever sent out and it will pay you well to try it. Ask for copy of our large catalogue, illustrating and describing the above and many other varieties of seed corn, oats, wheat and all kinds of farm and garden seeds. Mailed free if you mention this paper.

farmer who has smut in his wheat ought to treat the seed. There is no use in growing smutty wheat. The formaldehyde may be purchased from almost any druggist, at least any druggist can secure it for you. Be sure to get the full 40 per cent strength of formaldehyde.

A. M. TENNEYCK.

Ration for Brood Mares.

EDITOR KANSAS FARMER:—I would like to have the cheapest and most beneficial ration for my brood mares from the following: Corn, 40 cents per bushel; Kafir-corn, 28 cents per bushel; barley, 32 cents per bushel; bran, 75 cents per hundredweight; shorts, 85 cents per hundredweight; cottonseed-meal, \$1.50 per hundredweight. I have a sweep grinder if it may be used to any advantage.

I have enough alfalfa hay to feed one meal per day, plenty of cane and Kafir-corn forage, a little prairie hay. The mares weigh from 1,200 to 1,400 pounds, are in good, healthy condition, and will have their colts in May and June. They are to begin working on sod plowing and putting out spring crops.

What would be a good feed for their colts while running with dam? Would you advise turning out on pasture during the night as soon as grass is good, and feeding alfalfa hay at noon?

C. W. HUMFREY.

Comanche County.

Mares of this size in good healthy condition should be able to perform a reasonable amount of spring work and still raise a good colt, if properly nourished and if proper attention and care are given both colt and mare. Of course, we can not expect brood mares to do quite the work that regular work teams could do and will have to plan the work accordingly.

With the feeds suggested and the prices given, corn will necessarily be the basis of the grain-ration and I would suggest that some Kafir-corn might be used if it can be ground fine. A ration composed of about two-thirds corn, or corn and Kafir-corn mixed, and one-third bran will make a very satisfactory grain-ration. I would not feed either shorts or cottonseed-meal. Alfalfa hay once a day is also an excellent addition to the ration. For the sake of variety would suggest that a feed of cooked barley might be given once a week. Good bright cane and Kafir forage or prairie hay will go well for the balance of the roughage.

After the work season begins you must feed your mares a good grain ration and not too heavy on roughage. Feeding work-horses too much hay is a common fault of the average farmer. The mares should not be compelled to make heavy pulls or work excessively hard beforehand but will do ordinary work almost up to the time of foaling. They should not be deprived of exercise even when taken from work as foaling time approaches. If all goes well with mare and colt, work may begin in about two weeks after foaling. I do not think it is ever advisable to allow the colts to run with the dams. A far better plan is to give the colt a good, roomy stall, preferably several colts together, and during the first month bring the mares in to suckle the colts in the middle of the forenoon and again in the middle of the afternoon. If the mares should come from work very much heated, it is better not to allow the colts to suckle at once, as serious results to the colts may follow. The colts should be induced to eat some grain as soon as possible. They will soon do this if allowed to stand by the mother when she is eating. The grain ration for colts should contain a little more bran and it would be well to have some oats to take the place of part of the corn.

I would certainly advise turning out on the pasture during the night although you must not expect work horses to depend upon pasture-grass for any great proportion of the feeding nutrients required. The open air exercise and the small nap of grass will keep them in good condition and is absolutely necessary for the welfare of the colt. I would not feed very much hay to the mares at noon while working, as it is preferable to give the bulk of the hay at night when they have more time to masticate and digest it. Mares of this size will probably require from twelve to fifteen pounds of grain a day to keep them in good condition.

G. C. WHEELER.

Farm Notes.

N. J. SHEPHERD, ELDON, MO.

Early-matured stock are raised at a greater profit than those maturing slowly.

A dull, sunken eye shows defective nutritive power and lack of constitution and vigor.

A good appetite, power to digest, and

ARE YOU READY FOR HARVEST

How about it?

Old Mother Earth, the sun and the showers, the dews and the winds are doing and will do their part to produce the wheat and oats and rye and barley that go to make a bountiful harvest.

Are you doing your part?

Are you getting ready to *harvest* the crop after it is grown?

Do you know *how* you will cut your grain?

Are you sure you will harvest it to the best advantage—with the least loss of grain, the least waste of time, the least trouble and worry and expense?

These are mighty important questions, for a large share of your *profit* depends upon them.

It's not too early to begin to think about them.

With high priced land and high priced labor, you need to get every cent from every acre you cultivate.

Help will be scarce and expensive; therefore, you need a harvesting machine that will save you the most labor.

Harvest days are few; therefore, you need a harvesting machine that will save you the most time.

Grain is worth money; therefore, you need a harvesting machine that will save you the most grain.

You can't afford to run risks.

You can't afford to take chances.

And you don't have to.

Take an hour or two, now, before you get too busy and talk to any agent of the International Harvester Company of America, and find out about the International line of harvesting and haying machines for 1906.

You'll be interested whether you buy or not.

* * * *

Buying a machine of any kind for use on the farm is not as simple a matter as it may seem.

You can "size up" a farm and know pretty accurately how much an acre you can afford to pay for it, but unless you are a mechanical expert you can't judge a machine in the same manner.

You have to take other things into consideration.

For example:

You need to know something about the design—the mechanical principles—how the machine works.

You need to know something about the materials used in it.

You need to know something about the skill used in its construction.

You need to know something about the responsibility of the man behind it and about the machine's reputation.

The International Harvester Company line of machines for 1906 will satisfy you on these points—and on every other point that you may bring up.

* * * *

Bigness is not necessarily a merit in itself.

If you're buying a horse you don't care very much whether the man who raised it, raises one colt a year or 500.

But you know that the man who makes a specialty of horse breeding is more likely to raise a hundred good colts, than is the man who goes at

provement and every device that mechanical genius can contrive will be employed in their line.

2nd.—The materials are right.

By co-operation they are able to own, control and operate their lumber camps, their own saw mills, their own coal and iron mines, their own coke ovens, their own steel mills, relieving them of the necessity of depending upon the uncertain and fluctuating steel markets, coal markets, lumber markets, etc., for their raw materials, and insuring them at all times an abundance of materials which they *know* to be right. These are added reasons for the superiority of these harvesting machines.

3rd.—The workmanship is right.

The demand for these six leading makes of harvesting machines enables their manufacturers to maintain manufacturing plants of the highest efficiency and to employ workmen of the highest skill—factories and workmen which could not by any possibility be maintained to supply a small demand.

4th.—Their reputation is right.

The fact that so many farmers cannot be persuaded to buy any other—the fact that so many farmers continue to buy them—the fact that they are considered the standard wherever grain is grown in every part of the world is sufficient indication of their reputation and their reliability.

You probably need one of these harvesting machines.

You cannot afford to begin harvest with a machine that is liable to break down and cause you several days' delay.

You cannot afford to use a machine that loses a few stalks now and then and a whole sheaf here and there, for a little leak like that eats into your profits at a surprising rate.

Go to the dealer *now*, and get which ever catalogue you want.

If you don't know an International Dealer—write to us for the name and address of one nearest you.

International Harvester Company of America, (INCORPORATED) Chicago, Illinois.

International Line—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Kaffe Grinders, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber, Columbus and Bettendorf Wagons, Illinois Twine.

ability to assimilate food are the basis of a good feeder.

As long as an animal eats with a good appetite and maintains good thrifit the correct quantity is being supplied.

There is a difference between feed for promoting growth and that for making fat. Grow the animal before fattening.

The most successful farmers study every means of increasing the comfort of their stock and lessening the cost of keep.

A variety of feed is best for live stock because they eat it with more relish; besides, in a variety will be found all the elements of nutrition.

Excessive fat is detrimental to breeding stock and the food should consist of those elements that assist in promoting growth rather than fat.

The foundation-stones of good farming are rotation of crops, saving the manure, sheltering the stock, and economy in feeding.

Plan out the season's work so that no available force will go to waste and so that there shall be no expense for maintenance without the direct result in labor.

If a little clearing, a little ditching or draining, a little enriching, or a little picking up is done each year, the farm can be steadily improved. But if

the farm suffers a little neglect each year, it will soon run down.

Selling milk from the farm robs the land to nearly as great an extent as does wheat; but where cream only is sold, and the skim-milk fed, the loss of fertility is very small.

If the fences are always kept in good repair, the stock does not so readily learn to be brachy, and as much depends upon training your stock as on building the fence properly.

Properly managed, a rotation of crops utilizes all of the elements of fertility in the land, and gives that rest and change of diet which are as necessary to land as to stock or man.

Animal Dentistry.

By Dr. T. W. Hadley, Late Professor of Animal Dentistry, Western Veterinary College, Before the Sixteenth Annual Meeting of the Kansas Improved Stock-Breeders' Association.

The thrift and health of our domestic animals depend largely on their ability to assimilate or convert their

venience. But not until about twenty years ago did I find any one who pretended to furnish the relief I felt sure could be furnished. When I saw this man do the work I became an enthusiast on veterinary dentistry, and now they call me a "tooth crank," an accusation to which I plead guilty. Perhaps as good an illustration as I could give you of what has happened and might have been avoided is the case of the once very noted trotting stallion, Ethan Allen, who at his death and for some years before was owned by Sprague & Akers, on a farm near Lawrence, Kansas, just under the hill of the University. The history of his case is that some three years before his death he began to go down in flesh, and was treated by the veterinarian for general debility, but to no avail. He became very emaciated and finally died, and was buried on the farm. Some years after, his bones were dug up, cleaned and mounted, and placed in the Museum of Natural History of the State University. On visiting the museum I saw the skeleton, and being told whose it was, I naturally examined it closely, and there found the cause of his decline and death. It was all from defective teeth. At some time he had lost the fourth lower molar or grinder on the right side. This left nothing to oppose the corresponding one above so there was no wear on it, and it grew down until it came in contact with the lower jawbone and cut a notch in the bone three-fourths of an inch deep and fully an inch wide at

thoroughly competent; because an incompetent man can do you more damage than good. Never employ one of the traveling fellows styling themselves "veterinary dentists," or "horse dentists;" for if they are as proficient as they claim to be, they would not need to travel to get business. Any man who is a good man at the profession can locate himself and do work that will create a demand for his services that will keep him from traveling. Never allow a man to operate on your stock without a mouth speculum, an instrument made for holding the mouth open. There are several patterns in use that are good. There are several reasons for this; for instance, a man can see and know what he is doing; another is, that the animal being operated on without one will shut down on the forceps, and crush or split a tooth and cause trouble and expense.

DISCUSSION.

Mr. Terry: I think that if farmers as a class, stockmen and horsemen especially, will study this subject of veterinary dentistry they will be surprised. I venture to say that not two horses in five will not have defects in their teeth. I expect I have examined a thousand horses for that purpose and I do not believe there is a man here who has not made examination himself that has the least idea how many horses are ruined by diseased teeth. Everything that passes between those teeth causes that horse pain, the same as it would a man or anything else. I

Hector (30020) 2005, a beautiful bay Belgian. Three years old. Imported and owned by the Lincoln Importing Horse Company, Lincoln, Neb.

food into bone and muscle or flesh. In order to obtain proper assimilation, the food must be well digested. The preparation of the food for digestion begins in the mouth by mastication or chewing. During this act of mastication the food is also salivated, which also assists in digestion. If there should, perchance, be some defect in an animal's teeth, he certainly would be unable to properly masticate his food, and as a result digestion would be poor and the animal unthrifty.

Animals that are in this condition are often called "runts," "raw-boned," "rough," etc., when all that ails them is some defect in their teeth. The attendant will say he can not see why they are smaller and thinner than the others, for he knows they consume as much or more than the others in the lot or bunch, which is a fact.

Dentistry in the domestic animals has always appealed to me as a necessary and sensible procedure. I have been placed in close contact with them as far back as I can remember. My father was in the butcher business from the time I was a small boy and until his death, and I naturally learned the butcher's trade. In working at this trade—especially while doing the slaughtering—I had a chance to see a great many dental defects, and while yet a young lad I often wondered if there could not have been some means by which the poor animals could have been relieved of a great deal of suffering and inconvenience. When in later years I quit the butcher business and started handling horses in various ways, I saw more suffering and incon-

venience. Think of the suffering! Think of the relief that might have been given him with a few minutes work at a small expense.

In my practice I find every day some poor animal suffering more or less from some dental trouble; and it covers all the domestic animals from the cat to the horse. While in college I even helped to extract three decayed teeth from a large male lion in Hagenbach's menagerie.

I would like to impress on every member of the State Improved Stock-Breeders' Association the necessity and benefit of looking after his animals' teeth. It will save money in feed-bills, anxiety of mind, and afford much satisfaction.

Among the many symptoms or signs of disordered teeth that will be noticed are unthriftness or loss of flesh, rough, staring coat, slobbering, holding the head to one side while eating or drinking, quidding, or chewing hay or fodder into wads and spitting it out, and refusing to feed for days at a time. There are so many things that may go wrong in an animal's mouth that I hardly dare to enumerate them. A tooth may start to decay at the roots and show no sign of it on the outside. There may and often does occur an elongated tooth, as in the case I have already mentioned; teeth often get split by biting on some hard substance taken into the mouth with food, and in many other ways. But any competent veterinarian will find these numerous troubles on examination. When employing a man to do dental work on your animals be sure he is

do not believe two horses in ten but have defect of some kind in their teeth.

A Member: Will you let the hog in?

Professor Harvey: I have extracted decayed teeth from the hog.

Mr. Heath: I would like to ask which class of animals have the greatest trouble with the teeth?

Professor Hadley: Cattle and horses. Do not forget your cattle, gentlemen.

Mr. Coburn: Suppose a horse is found with a split tooth—should that tooth be pulled out?

Professor Hadley: Yes, sir.

Mr. Coburn: (To Mr. Terry) you agree with Professor Hadley that this is the only treatment?

Mr. Terry: Yes, sir.

A Member: You state that sometimes the root of the tooth is ailing. How do you find that?

Professor Hadley: You will find some trouble with his eating in the first place. We use a small mallet and tap the teeth, and when you come to the one which is decayed you will find it out. The horse will tell you.

Armour's Beef Meal.

Will you please give me the composition of Armour's beef meal if you have it and its feeding-value for brood sows and growing pigs, also what you consider it worth per hundred pounds compared with alfalfa hay at \$5 per ton.

P. W. HOLM.

The following analysis of Armour's fine meat meal has been made by Prof. J. T. Willard, director of the Kansas Experiment Station: Crude protein, 66.15; ether extract, 13.26; ash, 7.28. At the prices at which the various meat

Modern Silage Methods

That is the title of our new 216 page book. It tells everything anybody could possibly want to know about the silage subject. You can't think of a question that it does not fully answer. How to build, from foundation up, all kinds of silos. All about the crops and how to cut and fill. How to feed, with the most complete feeding tables ever published. About 40 illustrations help to make things plain. Used as a text book in many Agricultural Colleges. We have always sold the book for 10 cents, but for a limited time, to any reader who will ask for it, and name this paper, we will send a copy free. Write at once.

Salem, Ohio.

meals are sold for feeding-purposes, they certainly supply a very cheap source of protein. The value of tankage or meat meal is being experimented with by a number of Experiment Stations in growing and fattening of swine as a complement to corn and with most favorable results. In every case where hogs have been fattened on corn and tankage the gains have been made more cheaply than upon corn alone. The Kansas Station has just completed a feeding-test of corn and tankage and marketed the hogs at the age of nine months at an average weight of 325 pounds. These hogs have gained during the 112 days of the experiment at the rate of 1.75 pounds per head daily. The gains have cost \$4.07 per hundred-weight with tankage at \$40 per ton and corn at 35c per bushel. A similar lot fed the same period upon corn alone have gained at the average rate of one pound per day and the gains have cost \$4.32 per hundredweight. The tankage-fed hogs also brought a higher price on the market. I do not feel prepared to speak so definitely as to its value for brood sows and growing pigs. An experiment will soon be made at this station to test the value of tankage with younger pigs. For the feeding of brood sows I regard alfalfa hay as being very valuable and would give them all the alfalfa hay they will eat of the best quality obtainable. They will keep in a more healthy and vigorous condition than when they are confined to a ration of corn only. A little tankage may also be of value to the brood sows as a means of supplying protein, so necessary for the development of the young pigs, but I would not feed it to the exclusion of alfalfa.

G. C. WHEELER.

Comparative Feeding-Value of Mangel Wurtzels.

As you are an authority on animals and feeds for the same, can you give me the relative feeding-value of cow beets or mangel wurtzels as compared with bran at \$16 per ton, corn-chop at \$15, alfalfa \$7 to \$8, according to color and stage in which cut or cured, oil-meal, \$1.65 per cwt? What ought to be the price per ton of beets as compared with above?

W. R. STATES.

Owing to the ease with which corn can be grown and its large yields of both grain and forage, the growing of root crops for feeding-purposes is not nearly so common in the United States as with the English and Canadian feeders.

The Ohio Experiment Station reports a yield of sugar beets as high as 16 tons per acre on land which will produce 60 bushels of corn per acre. They estimate that it cost \$2 per ton to raise, harvest and place these in the cellar. The yield in Canada of mangels and carrots is at the rate of 13 1/2 tons per acre; the cost of producing and storing reaching about \$2.50 per ton.

Various experiments in Europe and some in the United States indicate that root-crops will replace grain in the ration at the rate of about ten parts of roots to one of grain, these being the averages of a large number of experiments. With this as a basis and the value for grain-feeds as given, root-crops will be worth at least \$2 per ton for feeding-purposes.

Studies in the carcasses produced by heavy feeding of root-crops show that the dressed weight in cattle, sheep, and hogs show in every case a greater shrinkage than where grain is fed. The carcasses of root-fed animals show less fat and are more watery than those from dry feeds. For young animals and

Dollar Package FREE Man Medicine Free

Man Medicine cures man-weakness.

Man Medicine gives you once more the gusto,

the joyful satisfaction, the pulse and throb of physical pleasure, the keen sense of man-

sensation, the luxury of life, body-power and

body-comfort—free. Man Medicine does it.

Man Medicine cures man-weakness, nervous debility, early decay, discouraged manhood, functional failure, vital weakness, brain fag, backache, prostatitis, kidney trouble and nervousness.

You can cure yourself at home by Man Medicine, and the full size dollar package will be delivered to you free, plain wrapper, sealed, with full directions how to use it. The full size dollar package free, no payments of any kind, no receipts, no promises, no papers to sign. It is free.

All we want to know is that you are not sending for it out of idle curiosity, but that you want to be well, and become your strong natural self once more. Man Medicine will do what you want it to do; make you a real man, man-like, man-powerful.

Your name and address will bring it; all you have to do is to send and get it. We send it free to every discouraged one of the man sex. Interstate Remedy Co., 1448 Luck Bldg., Detroit, Mich.

The cattle that will be sold at this

breeding stock this is a desirable condition. Animals running on pasture likewise show a more watery carcass and also lay on flesh at less cost for feed consumed. The feeding of root crops to this class of animals will tend to keep them in a more healthy and vigorous condition. The firm, hard flesh produced by dry grain feeding is certainly not conducive to vigorous young at birth and I believe that some form of succulent feed is most desirable for feeding breeding animals. Looking at it from this standpoint, roots have undoubtedly a higher feeding-value than would be indicated by the digestible nutrients they contain.

You do not state definitely what class of animals you are feeding, so a more precise answer could not be given; however, you can safely estimate that roots are worth at least \$2 and possibly somewhat more per ton for supplying a little succulence to maintain breeding animals in the best of condition during the winter season.

G. C. WHEELER.

Standard Poland-China Association Meeting.

The Standard Poland-China Record Association held its annual meeting in the Live Stock Exchange building at South St. Joseph. The meeting began with a banquet at the splendid new Transit House on the evening of February 13, where about 50 members of the association met a large number of business men and stockmen. Manager M. B. Irwin, of the St. Joseph Stock Yards, acted as toastmaster and did himself proud. Those who were present all bear testimony to the good things found upon the table and the better things found in the toasts which followed. February 14 was devoted to the business meeting. The report of the Treasurer showed the affairs of the association to be in a very healthful condition. The receipts of the past year amounted to \$9,562.16, and the balance now in the treasury is \$9,175.22.

President Hayzlett, in his annual report said:

"At our last annual meeting 582 shares of stock had been sold. We now have 650 shares of stock sold. I desire to compliment the directors on their wise and judicious management of the association's business during the past year. They have fully sustained the previous record and have been faithful to their trust. The Standard has had a remarkable growth during the past year, doing a business of \$9,416.66, which is marvelous. From an examination of the books at the secretary's office I find receipts disclose a feature of prosperity that is interesting to note which you will please observe from the secretary's report."

With Kansas City and Maryville both extending invitations and offering inducements for the next annual meeting, the Standard Poland-China Record Association voted to hold the next meeting in St. Joseph.

The election of president and board of directors for the ensuing year resulted as follows:

A. B. Garrison, Beattie, Kans., president.

Directors—W. T. Garrett, Maryville, Mo., chairman; B. R. Woodford, Shenandoah, Ia., secretary; E. E. Axline, Oak Grove, Mo.; John Blaine, Pawnee City, Neb.; John McKelvie, Plymouth, Ill.; C. F. Hutchinson, Bellaire, Kans.; W. T. Robertson, Lynd, Minn.

The newly elected directorate held a meeting in Maryville last night for the appointment of a secretary and treasurer and transaction of other business.

Each State in the association has a vice-president as follows: James Johnson, Arizona; W. W. Wilson, Illinois; J. T. Paynter, Kansas; C. B. Allen, Mississippi; H. H. Wing, New York; P. W. Peterson, South Dakota; T. M. Horsfall, Arkansas; W. A. Paxton, California; J. W. Jones, Iowa; O. B. Findley, Indiana; James Balingen, Colorado; L. L. Brooks, W. S. Parker, D. B. Garrott, Kentucky; G. W. Giles, Nebraska; G. E. Hayden, C. C. Williams, Washington; T. B. Gish, Wyoming; J. F. Bishop, Indian Territory; W. L. Davis, Ohio; H. E. Carver, Missouri; G. A. Swanson, Idaho.

Kansas City Hereford Sale.

In again calling attention to the sale to be held in Kansas City, Mo., February 28 and March 1, it is with the hope that intending purchasers of Herefords will not overlook the fact that this will be an opportunity that may not again present itself for a long time to come.

Every one of the sixteen contributors to this sale, is a breeder of high standing and is reliable in every sense of the word, and when such breeders thoroughly guarantee every animal that they sell, the buyer takes no chance whatever, for if any animal proves not to be just as represented or a breeder under reasonably good subsequent treatment, the purchase price is refunded or an animal of equal value is given instead of same.

The cattle that will be sold at this

Real Fence Economy

consists of getting the greatest possible fence value for the money expended. We offer you the best fence value obtainable and here is why we can do it.

We Sell Direct from Factory to the user of the fence. Thus we avoid all unnecessary and expensive handling and storing and cut out all profits and commissions of go-betweens. This makes a large saving. It enables us to spend more for good material and proper construction.

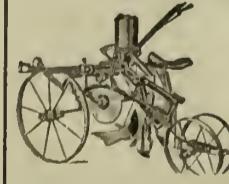

The Continuous Stay is what gives Advance Fence its superior strength. In Advance Fence the stay is never cut but runs continuously up and down across the fence for many rods without an end. Thus we preserve and utilize all the strength of the wire about half of which is wasted in fences with cut stays. Our method of construction costs a little more but it's worth while.

30 Days' Free Trial. Place your order with us for what fence you need and if after examining it you do not like it you can return it at our expense and get your money back. Don't you think this is a fair offer?

We Prepay Freight and guarantee safe delivery.

Write today for our Free Fence Book and wholesale delivered prices.

time have been carefully selected and buyers will have the opportunity of securing as good blood as there is to be found in the herd Book; and, as there are going to be about 100 head in this sale it is not the expectation of the contributors that record prices will be received, but on the contrary they rather fear that selling so many, the animals will not bring what they should bring, so it is really believed that there are a number of rich bargains in store for the breeders who attend.

Do not overlook this important sale, but by all means arrange your affairs at home and be on hand.

The sale will be under the management of Secretary C. R. Thomas, Kansas City, Mo., who will be glad to answer any questions relative to the same or furnish catalogue upon application, and should any parties who are unable to attend like to send a bid upon anything in the catalogue, Mr. Thomas will take pleasure in receiving the same and following instructions to the letter.

Leon Calhoun's Poland-China Sale.

The Leon Calhoun sale at Atchison was well attended by breeders and resident farmers. A splendid crowd greeted the auctioneer at the opening of the sale, and it took very few minutes to demonstrate that they were there for business. The principal attractions were there for business. The principal attractions were the good sows and gilts bred to the great bred boar, Prince Darkness. The top was a splendid gilt by The Picket bred to Prince Darkness, going to the good breeder, Frank D. Winn, at Mastin, Kansas, who bred both the sire and the boar to which she was bred. The entire offering went to buyers as follows:

	Price.
1. B. P. Wagner, Atchison, Kansas	\$35.00
2. H. L. Brewster, Halls, Mo.	36.00
3. R. P. Wagner	34.00

Forty-one head sold for \$1552.50, an average of a few cents less than \$38, the bred sows of Mr. Calhoun averaging over \$40, making it one of the very successful sales of the season.	

Dawley's Poland China Sow Sale.

At Osborne, Kansas on February 14, Mr. F. A. Dawley of Waldo, Kan., held the greatest sale of Poland-China sows that has been held in Kansas this year. As will be seen by our report, there were breeders present from wide-

ly scattered points and they were of the best. The sale included 44 head of sows and gilts which brought \$3,313 or an average of \$75.30 per head. Mr. Dawley is a young man only recently graduated from the Kansas Agricultural College, but he has made wonderful strides as a breeder. There is nothing in the Poland-China herd books that is too good for him to get. He does not hesitate to spend money when he is getting what he wants. We take pleasure in publishing the accompanying report somewhat in detail because of the quality of the offering and of the remarkable average made.

The sale is as follows:

Thomas & Swank, Waterville, Kansas.	
Mary Wilks by U. S. Chief Perfection	\$55.00
Artful by Corrector	97.50

Total	\$3313.00

Strawn's Sale of Shorthorns.

L. R. Strawn's sale of Shorthorn cattle, which will be held March 1 at his farm near Half Mound, Kansas, offers exceptional opportunities for breeders of this famous breed of cattle to purchase some cows, bulls and heifers of royal blood. Don't fail to attend this sale. His farm can be reached by the L. K. & W. Ry., from points west of Holton, or by a short drive from Valley Falls. Send for his catalogue and arrange to attend the sale. Col. Lafe Burger, the well-known auctioneer at Wellington, Kans., will cry the sale. If you can not attend in person, select what you want from the catalogue and send in your bids to C. E. Shafer, fieldman for the KANSAS FARMER, and he will give them careful attention.

Ward Brothers' Great Sale of Durocs.

Ward Brothers, the well-known hogmen, will hold their annual sale of Durocs on Tuesday, March 6, at their farm three miles south of Republic, Kans. This offering is among the best which has been made this season, and includes ten registered sows which are bred to their great boars. Shakespeare 3d (17919), Model H (37957), Honest John (37333), and King John. These sows are from 3 to 4 years old and consist of Bright Beauty (93966), sired by King Marti; dam Dark Beauty (76120); W. H. Choice (95082), sired by Corrector A.; dam Athol Queen; Sunflower P (35228), sired by Ak-Sar-Ben 4th (9423 A); dam Souvenir 3d (23264); Improver's Queen (95084), by Improver 2d; Yellow Gal (86092), by Best of Topnotcher; Ward's Aledos 2d (58400), by Young Acme; and Miss Marti (95086), sired by Marti King. Also, Miss Idol (95086), by Hugh Idol, by Topnotcher; Miss Dial 3d (76122), sired by Young Thorn; June R 2d (93968), by Ak-Sar-Ben; also eighteen spring gilts and fall yearlings, some of the sows named and others out of their own breeding sows which

they will keep in their herd. These gilts are bred to Long Orion by Orion, and Honest John by Young John; also some of them to their great herd boar. Ward Brothers have been in the hog business for many years and have shipped their stuff all over Kansas, and they rank high among the Duroc breeders of the State. Their catalogue is now ready and free for the asking. Mention the KANSAS FARMER and send for one at once. Parties who are unable to attend this sale but desire some of this stock may send bids to C. E. Shaffer, the fieldman of the KANSAS FARMER, care of Ward Brothers, Republic, Kans., and they will receive careful attention.

Jones & Son's Sale.

Jones & Son's sale of Durocs at Concordia last Tuesday was very successful considering the difficulty under which it was held, the day being very stormy and cold, so that many buyers were unable to attend. The stuff averaged \$42.20 per head, which, considering the quality of the offering, was very low. Jones' stock is always in demand and with a fair day his average would easily have been \$75 per head. They will shortly remove their famous herd of Durocs from Delphos to Concordia, Kansas, where they have purchased a fine farm and will continue to raise pure-bred hogs.

The Lincoln Importing Horse Co.

Manager A. L. Sullivan of the Lincoln Importing Horse Co., of Lincoln, Neb., makes a change in his advertisement this week and states that business with the big horses is good. Buyers are visiting the \$10,000 barn almost daily and many sales have been made. With the large number of stallions now on hand Mr. Sullivan is able to give customers a wider range of choice than he could later in the season. He has issued a beautiful catalogue of these horses which may be had for the asking.

Gossip About Stock.

Philip Albrecht, proprietor of the West Beaver Valley Stock Farm, at Smith Center, Kans., has a herd of Durocs that is hard to beat. Mr. Albrecht is constantly adding to his herd from the best strains of blood in the country and is rapidly taking a place among the foremost breeders of the State.

It is not often that readers of the KANSAS FARMER have such an opportunity as that advertised by J. W. Babbitt, of Hiawatha, Kans., who offers a nice bunch of Shropshire sheep for sale. This sale will take place at the farm, 2½ miles east of Hiawatha, Kans., on Monday, February 26. The sheep offered are descended from the flocks of Geo. Allen and W. R. Weaver, the great Illinois breeders. Any one unable to attend this sale may send bids to Mr. Babbitt and be sure of fair treatment.

Mr. Henry Shuler, of Clifton, Kans., purchased two sows at the Frank Dawley sale, which was held at Osborne, Kans. They were Keep-Me-To by High Roller by Woodbury, dam Elsie Keep On by Keen On; and D's Promise by D's Ideal Sunshine by Ideal Sunshine, dam Delightful U. S. 67473. Keep-Me-To is bred to the great boar, Nonpareil, and D's Promise to Admiral Togo. Mr. Shuler is just starting in the pure-bred hog business and makes no mistake by starting his herd with Dawley's great strain of hogs.

At Hope, Kans., on March 6, Mr. Thos. Gribben will disperse his herd of Galloway cattle. This herd numbers 33 head, of which 23 are females ranging from 10 months to 8 years old. None of the bulls are older than 30 months. Among these cattle are some prize-winners. These are mentioned in the advertisement on page 207. This will be a fine opportunity to secure Galloways of choice breeding at your own price. In addition Mr. Gribben will sell about 40 head of high-grade Galloway cattle and 15 mules. It is not often that such a chance presents itself. Read the advertisement carefully and you will want to go.

Among the jacks and jennets that will be sold at Moran, Kans., Friday, March 9, by W. D. Gott, Xenia, Kans., will be Chief Bonbon 962; black jack coming 4 years old, 15½ hands high, standard measure; Black Eagle 944, coming 5 years old, 15½ hands high; Giant 943, 7 years old, 15½ hands high; King Joe 946, 1 year old, 15 hands high, and the jennets that are producing

Williams' Shaving Soap

Dept. A, Glastonbury, Conn.

they will keep in their herd. These gilts are bred to Long Orion by Orion, and Honest John by Young John; also some of them to their great herd boar. Ward Brothers have been in the hog business for many years and have shipped their stuff all over Kansas, and they rank high among the Duroc breeders of the State. Their catalogue is now ready and free for the asking. Mention the KANSAS FARMER and send for one at once. Parties who are unable to attend this sale but desire some of this stock may send bids to C. E. Shaffer, the fieldman of the KANSAS FARMER, care of Ward Brothers, Republic, Kans., and they will receive careful attention.

PUBLIC SALE 25 Shropshire Sheep

To be held at

Hiawatha, Kansas, Monday Feb. 26.

I will sell at public sale 2½ miles east of Hiawatha, 25 head of Shropshire sheep. These are fine individuals, descendant from flocks of S. M. Allen and W. R. Weaver, of Illinois. The sheep offered are full blood but not registered. For further particulars

J. W. Babbitt, Hiawatha, Kansas

I am well pleased with the Auto-Fedan, but sorry I did not get one sooner. J. J. Schneider, County Treasurer, Abilene, Kans.

Satisfaction guaranteed. Manufactured by the AUTO FEDAN HAY PRESS CO., 1064 Jefferson St., Topeka, Kansas

Seed Oats

50c a bushel and up. The cheapest, heaviest, best yielding Oats are Ratekin's Reliable Grown, pure stock, Ratekin's New Sensation, Early Champion, White Russian and Texas Red Rust proof. Write for big catalogue, gives full descriptions of these oats, and all farm seeds, free. A postal will bring it. Address Ratekin's Seed House, Box 19, Shenandoah, Ia.

13 WEEKS FREE Or 15 months for only \$1

The Kansas Farmer

The "old reliable" KANSAS FARMER, established in 1868, the best genuine agricultural weekly paper in the west. It solves the problems for the busy farmer. It helps and interests every member of the farmer's family. It has 12 regular departments. Its contributors are expert authorities. It contains 24 to 32 pages each week. Sent on trial three months free. Test it. Clip the coupon below.

KANSAS FARMER COMPANY, Topeka, Kansas.

I accept your trial offer to new subscribers to send me the Kansas Farmer three months free. At the end of the three months I will either send \$1.00 for a full year from that date or write to stop the paper, and you are to make no charge for the three months' trial.

U. S. A.

these jacks, some with splendid jack colts by side. Everything goes without a reserve bid, rain or shine. The very best of reference is given, and you will get a square deal. Write at once to W. D. Gott, Xenia, Kans., for catalogue, mentioning the KANSAS FARMER.

E. D. King, of Burlington, Kans., now has what is considered the largest Berkshire breeding establishment in the world. It is estimated that he will have about 1,200 pigs on his farm from the farrow of 1906. His herd boar is the best son of the great Lord Lee who in turn was the best son of the grand champion, Lord Premier 50001. His sows are of the finest breeding and are good individuals. They are beginning to farrow now and the litters are very large and fine. Mr. King makes a change in his advertising card this week to which we direct special attention. When you want Berkshires get good ones. When you want good Berkshires go where they are and take your pick of hundreds.

F. M. Gifford, the well-known Shorthorn breeder at Wakefield, Kans., will hold a sale of Shorthorns in the stock pavilion of the Kansas Agricultural College at Manhattan, on April 25. His offering will include 20 bulls and 20 heifers. These heifers are bred to his great herd bulls, Senator Bruce and Cordellias Knight. Mr. Gifford needs no introduction to the public. He is one of the oldest and best-known breeders in the West and his sales which have been held in the past at Denver, Colo., Chicago, Ill., and Manhattan, Kans., have attracted the well-known breeders of the country. His catalogue will be out in a few days and a postal card will bring it to you. Write him at once.

In this issue of the KANSAS FARMER appears an illustration of one of the prize-winning mares owned by F. H. Schreipel, Ellinwood, Kans., who reports as follows: "I have had a good fall trade, and prospects for 1906 are opening up in good shape. Inquiries were never better than at present. The farmer never had such great demand and such high prices for the high-class draft horse as at the present time, and every farmer in the State of Kansas should put forth an effort to get a few good brood mares and raise some of these high-priced horses, and he will find it more profitable than any other stock. And every farmer can raise good draft horses if he has good draft mares and breeds to a good pure-bred stallion. I have on hand fifty head of registered stallions, mares and colts, which are ready for sale at reasonable prices."

Gudgel & Simpson, of Independence, Mo., write: "With regard to our offering in the combination sale at Kansas City, Mo., February 28 and March 1, that will say that they are a representative lot of young things from our herd. The bulls are an extra choice lot, any of them fit for a herd-header. Lot 81, Prime Tex 229750, sired by our great show and breeding bull, Dandy Rex 71689, is in every way worthy of his sire. His dam, it will be observed, is a Beau Brummel cow. From this Lampighter-Beau Brummer cross we have produced best results in our present breeding operations. Lot 82, Monarchist 229749, is a son of Beau Dandy, a sire we are using with specially marked success as a getter of good bulls. His dam, Miss Catherine 76703, by Imp. Chesterfield 56697, is one of our best breeding cows and one that has several slow animals to her credit. Monarchist is unusually blocky, low to the ground, a great flesh-carrier and extra smooth. Lot 83, Gohlin 229748, is a dark-colored, thick-coated fellow, with ideal head and typical Anxiety-4th conformation. His sire is one of the best breeding sons of Beau Brummel we have in the herd. The dam, Gwendoline 7th 61561, is from one of our best families. Gohlin 229748 is good enough to head anybody's herd. The females in the offering are all young, with their entire period of usefulness before them. Two of them, Lots 79 and 80, are daughters of Dandy Rex 71689, and will be offered in calf to Beau Donovan 3d 186831, a good son of Beau Brummel. The other heifers will be held unbred. This sale will undoubtedly furnish an opportunity to secure these good heifers at a figure below their actual worth, from the fact that they will be presented in only fair breeding condition, not having been specially fitted for this sale, yet we will warrant them to be all good individuals, and if carrying more flesh, would, without doubt, bring more money."

The offer of sows to be made by J. R. Young, of Richards, Mo., for his On and On sale on March 7, 1906, is one of the greatest ever gotten together from the standpoint of individual merit as well as breeding. There will be included about 15 head sired by Chief Perfection 2d. Among them is Orange Blossom, one of the \$1,645 litter in which were the \$850 pig, Mastleator; Hulda's Dream out of the \$525 Hulda's Keep On; Amelia Perfection out of Queen Vlew Queen, a \$450 sow; Chieftess another of like breeding and merit. The great sow sire, Perfection E. L., is represented by ten in the sale. Lucille, a daughter of the grand champion, Lucille, of the World's Fair; Fancy E. L. and E. L. Fancy, out of I Am by G's Perfection; Martha E. L. out of a daughter of Margaret, the Iowa State Fair champion. Then there are others such as Lady Foster by Foster's Chief Perfection; Missouri Lady, and three other daughters of Missouri Black Perfection. Two more of the good, mellow Perfection E. L. litter are out of the great Flossie Favorite. This litter was a large one and contained 11 pigs all great ones, namely Tony and a sister of his by Chief Sunshine 2d and two of his half-sisters by old Chief Sunshine; Thickset Girl by Thickset; Hunter's Lady Louise, a full sister to Ed Kleaver's great hoar, Provider that won first prize at the Ohio State Fair last year. Throughout the entire list will be found the same great breeding, size, style and finish that will please the most exacting. The size of the spring gilts of this offering would surprise those who

are breeding the present popular type, because of their wonderful quality and growthiness. Every breeder of the Poland-China will want the catalogue of this sale, and ought to arrange to attend whether he desires to purchase or not. To see On and On is alone worth the trip to Richards, Mo. It is rare that sweepstakes boar will show the true form and mellow ness exhibited by On and On 18 months after his honors were won. His great size, good bone, style and finish with his wonderful smoothness can not fail to please. All who have seen his get recognize the type and easy feeding qualities. A breeder contemplating a sale in the near future could not make it more attractive than by securing an On and On litter. This sale will afford an opportunity to get ready for your sale. If you can not be present at the sale on March 7, send your bid to one of the auctioneers, or to John D. Snyder, KANSAS FARMER representative, and he will handle it to your interest.

The Johnson County Jack Farm, owned by G. A. Fewel, Leeton, Mo., advertised on page 173, is one of the largest pack farms now in existence. It was established in 1850 as a mule farm, and in 1890 was added the choicest lot of breeding stock of Black Mammoth and Caladonian jacks, and Wilkes, Mambrino, and Patchen trotting horses, etc. Mr. Fewel claims to have sold more first-class jacks and jennets in the last ten years than any other farm in the world. They have gone into almost every State in the Union and some have crossed the big waters. They have been shown at many of the leading county and State fairs, and they proved by their winnings to be as good as the best. This present offering is the best ever made, and includes several that were never defeated in a show-ring. Among them is "Fewel's Taxpayer," that defeated the World's Fair jack, Silver Tips, for the best jack any age. During all this time he has never had any litigation or friction over any of his dealings, and has had only one jack returned. He gives as reference the bank of Leeton or either bank of Windsor or Calhoun, or any man or firm in Johnson or Henry Counties, Missouri.

Prospective buyers can feel assured that they will find what they want and get it at a bargain, and always be treated right and square at the Johnson County Jack Farm. If they will write him or wire G. A. Fewel when they arrive in Leeton, he will be glad to meet them at the depot, and save them further expense.

The section of the Herefords, selling in the combination sale at Kansas City, Mo., February 28 and March 1, that will attract as much attention as any other, will be the one consigned by Steele Bros., of Richland, Kans. This consignment will include 10 head, 6 cows and heifers and 4 bulls, principally the get of Princeps 66683, the sire of the \$1,750 Princeps 4th, the \$550 Princeps 12th, and most of the other show cattle that have gone out from Belvoir for the past few years. The bulls in this offering are all mellow, sappy, thick-meated fellows, the kind the "talent" call "good handlers." One of these, No. 68 in the catalogue, was in the show herd last year, showing as a junior calf. At the Nebraska State Fair he was first in class, and at Topeka, showing against seniors, he was awarded second place. He was got by a son of Princeps, and out of Rosalind, a line-bred Anxiety 4th cow. Every one of these bulls is a prospective herd-header, and will bear the closest inspection. The star attractions of this consignment, however, are the cows. Principal among these is the matronly looking show cow, Princess May 2d by Princeps. She was first prize and sweepstakes cow at Nebraska State Fair last year. This cow is not only matronly looking, but is a proven producer. She is 4 years old, has dropped two calves, and is safely settled to the service of Beau Gondolus. This is probably as valuable a cow as any that have gone through the sale ring at Kansas City. Her first calf, a heifer, one of last year's show herd, winner of first prize in junior yearling heifer class at Lincoln, is included in this sale. She is a beautiful, thick-fleshed, broody looking heifer, and will be one of the eagerly sought attractions of the sale. Princess May 2d's last calf is a bull, and is one of the best of this year's crop. This crop will doubtless have many admirers at the ring side, and the man who buys her will be conscious of the fact that he is adding to his herd one of the gems of the breed. Steele Bros' herd is not large—about 125 all told—but it is one of the very best in this country, and their stock is developed in such a manner as to retain their usefulness to an advanced age; the bulls siring and the cows producing calves regularly up to 12 and 14 years of age. There will be 100 head of useful cattle sold in these sales. The event is under the management of C. R. Thomas, secretary of the American Hereford Cattle-Breeders' Association, and catalogues may be had by addressing him at Kansas City, Mo.

L. M. Monsees & Sons, Smithton, Mo., will hold their annual jack and jennet sale at Limestone Valley Farm, 6 miles east of Sedalia and 2 miles north of Smithton, Mo., on March 6, 1906. To those who have seen the stock on this farm or have read an account of the World's Fair record of the firm, or even read the reports of the former sales of the firm, no introduction or explanation of the quality and desirability of this offering is necessary. But to the contemplating purchaser of jack and jennet stock, we wish to say that a like offering has never been placed at public appraisal before unless it was one of the former offerings from this farm. They are of the same breeding and merit as the herd shown at the St. Louis World's Fair that won 70 of the best prizes and many more than all other exhibitors combined; and they have been reared and developed in the best possible way to be perfect animals and are backed by the firm's guarantee which is as good as a Government bond, which considerations make it the opportunity of the year to secure such stock. In all, about 60 head will be sold. Twenty-seven jacks ready for

STANDARD STOCK FOOD

It Makes Stock Thrive.

Because it flavors the entire ration, stimulates the flow of digestive juices, makes digestion easier and more thorough. It makes the feed you feed go farther.

A pound of it contains more feeds than a pound of any other. It is stronger, purer, contains more valuable ingredients; it looks better, smells better, tastes better and is better. It lasts longer, goes farther and does more good. Compare it with others and see for yourself.

Never Had Cattle So Better.

Orient, Ia., April 9, 1902.
Three years ago I bought and fed 500 pounds of Standard Food. I then tried 500 pounds of each of other stock foods and have gone back to the Standard again and intend to stay there. I would rather get the Standard and pay for it than feed the other foods at any price.

Ask Your Dealer. If he will not supply you, send us his name, tell us how much stock you keep and we will send you free our 50c live stock book, 160 pages. Write to day. Address

Great American Desert Seeds
are best for general use, are grown in the very heart of the region once known as the Great American Desert, at an altitude of over two thousand feet above sea level and without irrigation. They are time tried and drouth tested and have proved producers of profitable crops of both grain and forage. Write for list of specialties and prices.

M. G. Blackman, Grower and Dealer, Hoxie, Kans.

use are catalogued and a better lot was never seen by the writer. They are the kind that sire the \$200 mules that buyers are hunting the country over for. A bunch of mules on feed at Limestone Valley Farm, sired by the jacks on the farm, are expected to sell at \$225 per head, \$210 having already been bid for them in only fair flesh. Besides the jacks catalogued there are about 25 jennets some with colts at side and others bred to the grand champion World's Fair jack, Orphan Boy, or to Limestone Mammoth, two of the greatest breeding jacks, one being the greatest show jack in the history of the business. He has been successfully shown for ten years and was never defeated, and the World's Fair herd nearly all carried his blood either through dam or sire. These jennets are the dams and sisters in great part to the great jacks the farm has been producing, and are of the sturdiest and most robust stock in the country. They are the result of the best breeding and are backed by the firm's guarantee which is as good as a Government bond, which considerations make it the opportunity of the year to secure such stock. In all, about 60 head will be sold. Twenty-seven jacks ready for

one day of the year this privilege is granted the public by this, the greatest jack breeding firm in the United States, or possibly more correctly speaking, in the world.

Hunter-Trader-Trapper.

To the lover of out-door life the Hunter-Trader-Trapper magazine will bring a deal of satisfaction. It is a large, finely illustrated magazine devoted to those things which are of special interest to the hunter and trapper and the fur trade. It teaches all the tricks of trapping and many a young man has been able to find enjoyment and, at the same time, make good money by trapping skunks, muskrats, mink, etc., in localities where they were previously supposed not to exist, or at least, to be very scarce. The magazine gives the prices of all kinds of furs and pelts and tells how to catch them. It is full of interest and valuable receipts for making snares, setting traps, etc. This magazine costs \$1.00 per year but we have made arrangements so that any one can get the Hunter-Trader-Trapper and the KANSAS FARMER, each for one year for only \$1.50 for both. Send in your orders at once. You will like it.

STATE ORGANIZER.

W. B. Obrylu.....Overbrook

Insurance.

At the recent meeting of the Kansas State Grange, held at Madison, Kansas the matter of life insurance was taken up and referred to a special committee, whose duty it is to prepare a detailed system, and submit the same to the subordinate granges for consideration and report each to the lecturer of the State Grange as soon as possible. We also note that at the Delaware State Grange a committee was appointed to plan the organization of an American Life Insurance company, to be managed solely by the grangers and report at the next session. We also note that in New Hampshire the Grange Mutual Fire Insurance Company still continues to give to the patron's a safe insurance at the lowest possible cost. The company carries risks to the amount of \$7,000,000 on the best farm property and has saved to the members many thousands of dollars during its seventeen years of existence. We also note from the same source that the Grange Life Insurance Association does not seem to receive that encouragement and patronage which it deserves if it proves successful. The old members for the most part are staying with the company and paying the assessments promptly, but more of those who desire life insurance of a safe and honest kind should join the association.

The Grange Bulletin says, "When the proposition to start Grange Fire Insurance Companies was made, the question was, 'Can it be done?' Many said 'No.' Many others were doubtful, a few said, 'Yes.' The regular fire insurance company managers smiled in derision. The few believers went ahead and tried it. The result is a success. The grange insurance on farm property is the best in the country, cheap, safe, reliable, and satisfactory. Now, why can not farmers insure each other's lives? The same direct business methods that make fire insurance the best and cheapest known, would operate to make life insurance just as good and relatively as cheap." The National Grange recommends that the State Granges work out each its own system of life insurance. Some of the State Granges have appointed committees for that purpose, and Kansas is one of them.

Grange the Hope of the Nation.

"One of the hopeful things for the future of the Nation is the great organization which the farmers of the country are centralizing around the Grange. Within recent years there has been a marvelous growth that has extended to nearly every State and territory in the country, so that when it recently held its National Convention the attention of the whole country was attracted to its actions. It has taken hold of all of the vital questions before the country, and the discussion and action that will be brought to bear upon them are going to exert a mighty influence.—Amesbury (Mass.) News."

At the Massachusetts State Grange, Ex-Governor Bachelder said his policy as "Master of the National Grange will be determined wholly by the policy of the Grange, but that he expects to put forth the greater part of his efforts in the great agricultural States of the Central West, with particular attention to Wisconsin, Minnesota, Iowa, Missouri and Kentucky.

"In these States, Governor Bachelder said, the Grange movement has been slow to grow and the intention is to make it powerful where the farmers

form so large a percentage of the population as they do in the States named. In this connection he pointed out that the Grange is stronger in New England than anywhere else. There are 1,000 subordinate Granges in this group of States, with about 100,000 members."

The Grange stands to-day as the acknowledged leader of the sane, thinking farmers of the country, and each succeeding year more and more demonstrates its right to leadership. The farmers of Kansas have almost recognized the necessity of farmer organizations, but have been very much divided as to choice. But since the Grange is the only one that has stood the test of time, the farmers of Kansas are beginning to realize that the Grange is the leader, which is known by the many letters of inquiry as to the ways and means for becoming members of the great farmers' organization.

What Benefit Is the Grange to the Farmer?

Geo. Black, Secretary of Kansas State Grange, Before the Farmers' Institute at Wellsville, Feb. 9, 1906.

Nothing has stimulated inquiry, nor done more for the education of the human race, than those two little words "what" and "why."

All down the ages, from the time that King David asked the question "What is man that Thou art mindful of him?" until this hour when humanity is everywhere asking, "What are the rights of man?" the words "what" and "why" have awakened every latent energy in statesman and philosopher, in prelate and layman, in all classes and all people; for man loves to be able to give a reason for the faith that is in him and feels that he is untrue to himself and unworthy of the confidence of his fellow man, if he is unable to do this.

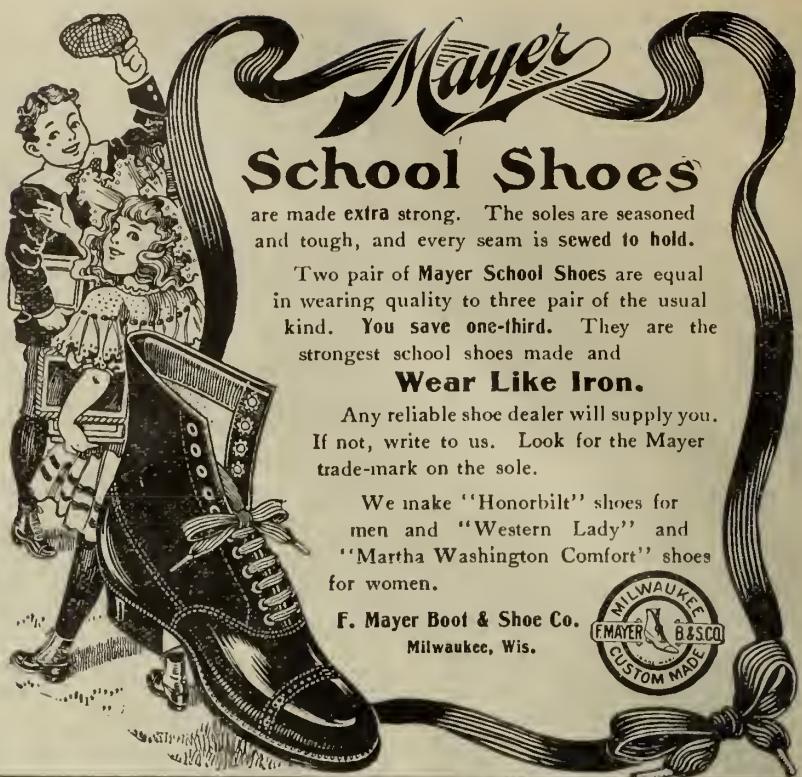

The logic of a Gamaliel never has stifled human reason nor checked human inquiry. It may have saved the life of the Apostle Peter, for Peter was preaching a new doctrine and declared that it was heaven-born and heaven-sent; and Gamaliel decided that it was not a matter of human reason and therefore cried out, "Let them alone, for if this work be of man it will come to naught, but if it be of God ye can not overturn it." Yet you would feel that I was evading the question if I should reply to your inquiry as did Gamaliel to the Jewish rabble.

IT WAS NEEDED.

The Grange is but another offspring of the many good institutions that have been born to us through the throes of civil liberty, for it had to bide its time and wait until the world was ready to receive it. It could not have lived a moment in the Roman or Grecian age, nor under any of the absolute monarchies of the old world; nor would the age of Knight-errantry or Feudalism have tolerated a secret order among the peasantry of their time. The submissive, cringing, enslaved tiller of the soil, never once during all those ages even dreamed of a right to organize for mutual improvement. The pioneers of human rights must first fight to the bitter end that long battle of the centuries, and pave the way for freedom of thought and liberty of speech. They paid the price in the dungeon and on the rack and at the stake; and the magnitude of their sufferings and their heroism fairly staggers the historian until he feels more like kneeling at their shrine than writing of their deeds. But God bless their saintly souls; we are reaping where they have sowed and are garnering a full harvest.

So I again declare that the Grange was born in due season, was born of the essential wants and needs of the farmer; and the fundamental principles upon which it was based will not only bless the agricultural class but in blessing them it will also bless all social conditions within reach of its sphere of influence.

Its founders said: "We need an order wherein we can educate ourselves along every line of social, moral, mental, and even physical development. We need an order where the practical knowledge of each member may become the common property of all. We need an order where we can cultivate our social qualities and bring them up to the highest possible standard. We need an order where we can reason together on the best possible modes of cultivating the soil and crops, of harvesting them, and of buying and selling; where we can teach temperance and insist upon economy and practice brotherly love; where we can cooperate to protect ourselves against the greed of capital and the power of corporations; and where we can decide

Mayer School Shoes

are made extra strong. The soles are seasoned and tough, and every seam is sewed to hold.

Two pair of Mayer School Shoes are equal in wearing quality to three pair of the usual kind. You save one-third. They are the strongest school shoes made and

Let Me Quote You a Price on a First-Class Fanning Mill

How many dollars could you save if you owned a genuine Chatham Fanning Mill?

Think for a moment what it will do.

It will grade grain so you can get a fancy price for the best.

It will take weed seed, chaff and withered kernels out of seed grain.

It will separate one kind of grain from another.

It will remove oats from wheat.

It will clean Corn, Rye, Barley, Wheat, Oats, Timothy, Clover, Millet, Flax, Rice, Peas, Beans, Kaffir Corn, Potatoes, Broom Corn, Alfalfa, Grass Seed, Cotton Seed, Alsike, Blue Grass, Red Top, Buckwheat, Hungarian, Orchard Grass, Rape, Rye Grass and everything of this kind.

And in any one of these processes a Chatham Fanning Mill will save its entire cost in short order.

For the fanning makes every bushel of grain you raise worth more money.

You don't sow weeds if you use a Chatham Fanning Mill.

You don't get "second price" for grain if it has been fanned.

And to prove our claims to you—to convince you that Chatham Fanning Mills are the best made and will do what we say—we are willing to let you try one 30 days **FREE**, if you wish.

Send today for our liberal proposition. It will surprise and please you.

For we sell direct to you and ship from one of our 20 big branch warehouses in leading cities. This means prompt shipments and quick deliveries.

And you get a Fanning Mill made by a factory that makes a specialty of high-grade mills.

You buy at a bargain price.

For we make our own mills in one of the biggest factories in the world.

Our ample capital enables us to buy supplies in immense quantities at low prices.

We turn out hundreds of Fanning Mills. Our workmen are skilled. They have had long experience. They know just what to use and how to use it.

Consequently we are able to give you bigger value for your money than you can get anywhere else.

The Chatham Name Stands for Quality.

And you can get no such Fanning Mills as ours from ordinary mail order or catalog houses.

You cannot buy mills as good from dealers or at general stores.

Over 200,000 Chatham Mills are in use. We have made them for sixty years. Today they are better than ever—absolutely modern and up-to-date.

Users everywhere will tell you our mills are the best.

But send at once for the rest of the story and our liberal selling terms.

Ask for our little book "How to Make Dollars Out of Wind." It tells how a Chatham Fanning Mill will put dollars in your pocket.

A post-card with your name and address, mailed today, gets it.

Get This Windmill Grinder Free

Then your Pumping Windmill will do your Feed Grinding and run One-Hole Sheller and Churn or Grindstone. We don't give it away, but we ship it to any reliable farmer to use, and after the grinder pays for itself, then you pay us. If it don't work you ship it back without paying anything. You Take No Risk.

Especially recommended for use with 8-ft Back Geared Star, Goodhue, Samson, Ideal, Fairbanks, Dandy, Dempster, Duplex, Red Cross, Capital and 10-ft. Halladay wood mills. Any good windmill that makes 35 to 50 strokes per minute is sure to run it good. It pays for itself by the time you are to pay us and really costs you nothing. You have Thirty Days' Trial to decide if you wish to keep it. You fill up the hopper over grinder and let it grind, without further attention, night or day. You can put the Rotary Grinder in barn or other building as desired, within 150 feet of windmill.

WRITE TO-DAY for our FREE OFFER and testimonials and photo views of outfits now in use.

Goodhue Rotary Grinder Company,
ST CHARLES, ILLINOIS

upon the laws that are just to us and the laws that discriminate against our interests." It was also thought best, that as far as was possible, to serve our best interest, we buy and sell together and cooperate for our mutual good.

These were the reasons given to show the needs of an organization, and these are the fundamental principles and declared purposes upon which the order, known as the Patrons of Husbandry, rests to-day. And it would be hard to make me believe that a single soul in all this universe, who is honest of heart and clear of head, who would find fault with a single item of these principles or with us for organizing upon them.

It is true we have made mistakes, for back in the seventies our young and untrained order ran away with us and broke over the trees and attempted to plunge into the political arena and reform the laws, until they well-nigh wrecked our entire order in this State. But a remnant of the true and faithful held fast to our first principles; and when the storm was over they commenced rebuilding on the old and tried foundation; and now, for a quarter of a century, we have held to the "even tenor of our way," have faithfully clung to the precepts of our order, have kept all partisan politics out of the Grange and have enjoyed a wonderful growth in members and lodges all over our State.

We have tried to be careful not to infringe upon the rights of either individuals or corporations. We have advanced our own interests without detriment to any other person or party; we have increased our own happiness without deducting one iota from the rightful enjoyment of any other living being.

IT IS AN EDUCATOR.

We at least feel sure that the education we have received in our assembly halls has made us better citizens, with broader views and nobler purposes in life; we believe that the discussions of farm questions in our meetings have greatly improved our farming methods in the selecting of tools and machinery, in preparing the soil and planting our crops and in harvesting and marketing them, and in beautifying our homes and making them more attractive. We believe that through the influence of our order we love our homes and our calling more than ever before and that our boys are better satisfied and more willing to stay on the farm.

COOPERATION.

We know that while cooperative business ventures are not among the fundamental principles of the Grange, yet, as an incidental matter to our order, we have made extensive use of such in Kansas in insurance and in cooperative merchandising, and this fact has brought us in conflict, in a business way, with those who follow like callings, and possibly engendered some prejudices and dislikes, just to the extent that we have absorbed trade and commissions that otherwise they would have enjoyed. But should we be blamed for this? Have we not the same right as any other person, class, or people to enter into any legitimate business? And, if the Johnson County Cooperative Association pays back every year to their eight or nine hundred stockholders \$12,000 to \$15,000 in profits that otherwise would have enriched three or four merchants, is it not doing the greatest good to the greatest number, and should you not rather commend us than to condemn us for this? And if our Grange Insurance Company, that is now carrying \$4,000,000 in farm risks, and is caring for the best interests of its patrons at less than half of what it would cost them in old-line companies, and is paying every loss fairly and promptly and keeping this excess of profit at home, in the pockets of our people, to spend it with our own merchants and upon the industries of our own community, rather than to let it go to enrich the East—are we not doing a good deed or would you condemn us for this? If we are wrong, put your finger on the error and help us get right, but if we are right, encourage and commend us for we want to be right and we want to do good.

ITS AIM.

The one great aim of our order today is, that through the forum of the Grange, we may become as cultured and as well-informed on all the interesting topics of the hour, and that our judgment and opinions may deserve as much consideration and weight as any other class or calling, so that the merchant, the tradesman, and the professional classes, will commingle and harmonize with us on a common, fraternal,

I will send my paint book—the most complete book of its kind ever published—absolutely free. Also my instruction book entitled "This Little Book Tells How to Paint" and copy of my 8 year guarantee.

O.K. Chase The Paint Man.

703 K Olive Street,

St. Louis, Mo.

NOTE—My 8 Year Guarantee backed by \$50,000 Bond

Social

plane, that the middle wall of partition in human society, may be rent asunder and broken down forever. We long for the day when we can feel assured that we are making a far brighter history than that which inspired the poem of "The man with the hoe," or moved the pen to write the story of the "Peasant life of past ages."

We are not the sons of Ham. And if we were the mudsills of society for untold centuries, the fault was not in us, but rather in that accursed element of the human race that has ever played the part of the shark to the fish of the sea and of the vulture to the fowls of the air.

We are dreaming of an age of better things for us and trying to work out our own salvation and to redeem agriculture from the slurs and slimes of past ages and bring the farm and the farmer back, nearer to that first and beautiful pattern that was given to us by the Holy One in Eden's ancient garden.

Will you help us? Will you lend us a hand? We have chosen the Grange as our shield and our battle-axe to

carve our way onward and upward to that higher plane, and we have taken the name of "Brother" and "Sister" that we might sustain equality and inspire a common interest in this effort to improve our condition. We are determined that agriculture shall never take another backward step, but shall go forward, until the man who holds the plow and the man who guides the State will stand together as brothers, equally worthy of the love and esteem of all the good people of the twentieth century.

Send for Free Sample.

Our renderers should not fail to include Congo Roofing in their list when they are sending out inquiries regarding ready roofings.

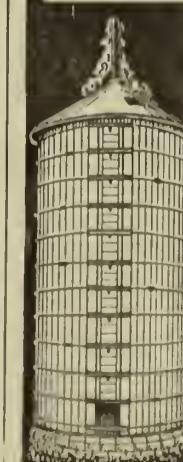

This roofing comes in four weights adapted for every kind of surface and for every size of pocketbook.

The manufacturers will send a booklet giving complete information about the roofing, together with a set of samples, in response to a postal card.

Address the Buchanan-Foster Company, 724 Drexel Building, Philadelphia, Pa.

All kinds of stock relish a change and variety of feed.

**THIS SILO
\$92⁴⁰**

Every stock and dairy farmer needs a silo. Our silos are made by expert silo builders, with extraordinary care, from best of materials, and will keep silage in good shape for feeding—in fact, there is no better silo made at any price. Made in sizes to suit. We save the farmer two profits and give him best silo built.

We also have a plan in sell this silo, and all kinds of merchandise, in the form of books, pamphlets, and other publications—and save them from \$150 to \$200 a year. Write for full particulars about it.

Write for special silo ent. Don't buy until you get it. CO-OPERATIVE SOCIETY OF THE NATIONAL SUPPLY CO., LANSING, MICHIGAN; CHICAGO, ILL.

PATENTS.

Home Departments

CONDUCTED BY RUTH COWGILL.

Farewell to the Town.
Farewell, ye busy haunts of men,
Ye garish sights of town,
Your motley crowds and grimy streets
A weariness have grown;
To other scenes my fancy strays,
O haste, impatient feet,
And let me see the summer flowers
That bloom in meadows sweet.

Those storied heights of brick and stone,
Which gaze with solemn stare
Upon each other day and night
Across the thoroughfare
Repel me with their frowning face;
I long to stroll at ease,
Through country lanes with hedgerows bound
And avenue with trees.

The busy hum of whirling wheels—
The clatter of the forge—
Those rolling clouds of smoke and steam
Which city works disgorge,
Will never reach my quiet home
As through the shining hours
I listen to the humming bee
Among the clover flowers.

The music of the city's roar
We face for Mammon's sake;
But let me hear the singing birds
That warble in the brake—
The cuckoo's note from distant haunts,
The blackbird piping loud,
And o'er the waving mowing grass
The skylark in the cloud.

Then come away from Mammon Town,
There's wealth in other hives,
And sweep the cobwebs from your brain,
The canker from your lives;
The odors of the city streets
Are charged with mystery,
Come, let us smell the fragrant mold
Along the fallow-lea.

We toss the weary books aside,
And raise the aching neck,
From cash and ledger's figured page,
To clutch the friendly check;
Good-by, proud city, thou hast proved
No friend to me or mine;
And if I see thy face no more,
My heart will not repine.

—J. T. B.

Educated Motherhood.

FLORENCE SHAW KELLOGG.

PART I.

"His father, so they say,
Was famous in his day;
What did his mother do?
His father helped to stump the State
For Grant in eighteen sixty-eight—
What did his mother do?
She merely watched him day and night,
She merely kept him headed right,
And went on praying that he might
Some day be brave and good and great—
That's all his mother did.

"His father, it is said,
Possessed a level head;
What did his mother have?
His father was no common clod,
Intended but to tote a hod.
What was his mother, though?
Oh, she was merely one who taught
Her son that vices must be fought,
That sin is in each evil thought,
That virtue paves the way to God—
That's all his mother was."

PART II.

The subject of educated motherhood is so vital and deep, so many-sided, that no one can do it justice in a short paper, and I can, at best, but hint briefly of the many things that might be said here, and leave you to work out each your own salvation, as a mother, find your own riches and draw your own conclusions. The little poem I have quoted gives a bright, sarcastic contrast between the father's and the mother's work, as it sometimes is in theory, but as a fact we know that if the work be intelligently and rightly done, there can be no sharp line drawn between the father's and the mother's part. We know that though he must go out into the world while she remains more in "the sweet, safe corner of the household fire," though he fights while she prays, yet in deeper truth they stand side by side in the home life and the work they do there for their children, he, as well as she, working and praying to keep them "headed right" and to make them "brave and good and great," in true worth and morality whether or not they be great as the world reckons greatness.

But as it is the mother of whom you wish me to speak, we will presuppose all this, and though I say "mother," you will none of you be unmindful of the fact that in love for and interest in their children, the twain are one; and the necessity for educated fathers—for fathers who are earnest and pure, as well as strong and determined, for fathers whom the mothers hold up as examples for their children, and in whose footsteps they will gladly see them walking—this is just as imperative as for mothers, and they should work together in perfect love and harmony always.

THE MOTHER'S WORK IS ETERNAL.
Ruskin says, "Good women are wash-

erwomen, working to make the world clean and pure." The mother should indeed be a "washerwoman" of this kind, and should strive first of all to make her home clean and pure, her children brave, true, and loyal in body, mind, and soul, after which she may give her surplus time and strength, if such there be, to the purifying and upbuilding of the life about her. She, most of all, should feel the eternalness of her work, its unending duration and importance, for this will help her, as nothing else can, to keep her spirit above the petty cares and vexations that come in the ceaseless round of daily work with its constant repetitions, and will lift it out of the rut of drudgery and set it in its true place with the great work of the world. Let her realize that her life is a part of the great creative life, and her work extends to the eternal verities—a part of all that is good and true and beautiful—joined to the work of God and the holy angels, and how can she grow weary or disheartened?

HIGHER EDUCATION.

There is much said and written both for and against the higher education of woman; and fear is expressed lest, if this be granted, it will lessen the desire for marriage and motherhood. But is not this desire too deeply impressed upon the heart of woman to be thus easily disturbed. The love of home and children is a part of the deepest life of every true woman—placed there by God Himself, who is the first great Parent. From God, too, comes the reason—the intellect that enables her to acquire an education. Surely he has not given her this ability to have it lie unused—undeveloped. Does it not follow as a logical sequence that a mother can do her work better if her character be full, well-rounded, her mind trained and educated? How much of this especial education for motherhood may come from books, is an open question, but it seems to me nothing that helps her as a woman—nothing that adds to the riches of her heart and mind, and makes her stronger and more influential, can hurt her, or lessen her good work as a mother. Dickens says, "How much may depend on the education of daughters and the conduct of mothers, how much of the brightest part of our National character may be perpetuated by their wisdom or frittered away by their folly? how much of it may have been lost already? and how much more is in danger of vanishing every day?" are questions deserving of a little serious consideration from all young couples, nevertheless."

The mother should keep a broad view. She, least of all, can afford to be petty in her thoughts of life, but should have a largeness of soul, a clearness of vision that will enable her to keep things in their true proportion and place. She should know the relative importance of each phase of her work and not place undue stress on the outer or material, to the neglect or impoverishment of the more enduring matter. She should recognize the good and beautiful everywhere, and in all things, and bring to her work a loving consecration and tenderness that will make it a true success. She will never forget the man or woman that hides in the little child of to-day, and her work will be deep and progressive.

THE MOTHER LOVE.

"A partnership with God is motherhood, What strength, what purity, what self-control, What love, what wisdom belongs to her Who helps God fashion an immortal Soul."

She who feels this, as every devout and worthy mother must feel it, will know the need of the highest and fullest education to help her in her holy work. There is nothing that a woman can do that can compare with this work for beauty and sacredness; none that requires greater preparation or deeper training of heart, mind and hand. Textbooks may do much for her, but, after all, the best of the mother's education comes not from books but is a something deeper and better than all this; a something God-given that begins with the little girl's love of her dollie and grows with her growth, strengthens with her strength, up to the time when with the consciousness of the new life beating within her own, God holds her apart and talks to her of love and renunciation, of self-denial and self-sacrifice that shall bring a most holy joy and fulfillment of desire.

Lowell Ingrain Carpet

WHY YOU SHOULD BUY IT

Because: It has been recognized for seventy-five years as the best INGRAIN manufactured—ALL WOOL.

Because: The goods are wound on a hollow stick which constitutes a trade-mark and guarantees that you are getting a LOWELL INGRAIN.

Because: Styles and colorings are up to date, in plain shades and figured patterns; closely resembling high-grade carpeting.

Because: LOWELL INGRAINS are so woven that they can be used on both sides: a feature decidedly advantageous. No one doubts the wisdom of covering a room entirely in a rural home, making it warmer and easier taken care of.

Ask your local dealer for a LOWELL INGRAIN when looking for a new carpet. Look for the hollow stick and be satisfied with none other than a LOWELL INGRAIN.

Manufactured by BIGELOW CARPET CO., New York

While she waits for fulfillment she is in God's school and He is her teacher with love as the theme and the text. It is a holy, holy time that a woman wastes only with great loss to herself and her child. She walks with the Most High in His creative garden and gathers there rich stores of wisdom. She keeps the windows of her soul open on the sunward side and the light shines in clear and strong and vivifying.

Tested Recipes.

Chestnut Patties.—After the nuts have been cooked tender and mashed, add to 1 pint of nuts $\frac{1}{2}$ cup cream, two well-beaten eggs, a quarter cup of sugar, a cup and a half of milk and a salt spoonful of salt. Line patty shells with a good paste, fill with the nut mixture and bake quickly.

Cream of Chestnut Soup.—Take the shells off a pint of chestnuts and cover with boiling water. After five minutes rub off the brown skin. Cook until tender in boiling salted water to cover, then mash through a colander and return to the water in which they were cooked. Add 1 pint of hot milk or veal stock, a tablespoonful of butter and salt and pepper to season. Simmer ten minutes. Take from the fire and stir in a beaten egg and serve at once with croutons. A cup of cream is an addition, and more milk may be added if the puree seems too thick.

Chestnuts as a Vegetable.—After the nuts are peeled and blanched throw into a bowl of cold water. Put 4 table-spoonfuls of butter in a saucepan, with 2 tablespoonfuls of flour and cook until blended. Add 2 cups clear broth and stir until smooth. Salt and pepper to taste. Add the dried nuts, cover and simmer gently until the nuts are tender.

Chestnut Stuffing.—For a plain forcemeat, shell and blanch two quarts of nuts and boil in water to cover until tender. Drain and mash. Add to the nuts 3 tablespoonfuls of butter, a level teaspoonful of salt, a saltspoonful of pepper, a teaspoonful of minced onion, 2 tablespoonfuls breadcrumbs and the yolks of 2 eggs. Mix thoroughly and stuff. This makes enough for a turkey. If a richer forcemeat is desired, add to the above dressing 2 tablespoonfuls minced ham, veal or sausage, a tablespoonful of parsley and a little powdered thyme and grated lemon rind.

Daviled Chestnuts.—Shell and blanch as many chestnuts as are desired. Dry thoroughly. To every cupful of the meat allow a teaspoonful of olive oil. Pour in with the nuts and let them stand in the oil for half an hour. Place in a clean tin or frying pan, dredge with salt mixed with a little cayenne, and let the nuts brown in the oven about fifteen minutes. Stir and shake the pan often, until the nuts are a crisp, delicate brown.

Fried Peanuts for Luncheon.—Shell the nuts, brush off the brown skins, then toss in hot butter or olive oil until crisp and smoking hot.

Peanut Pick-Me-Up.—When you come in tired from a shopping trip, try a glass of milk, hot or cold, thickened with chopped peanuts.

Butternut and Apple Salad.—Cut small round slices from the tops of a half dozen nice, tart, red apples. Hollow them out, making the pieces scooped out as large as possible, but taking care not to spoil the shape of the apple. Cut the pieces into cubes and put into a bowl with an equal quantity of celery hearts of the same size pieces and butternut meats. Add a cup of mayonnaise, mix lightly then add a half cup of whipped cream, toss and fill the apples. Serve on individual plates with a couple of crispy lettuce leaves underneath the apple, or arrange in a low salad bowl.

"A Kalamazoo Direct to You"

You save from 20% to 40% by buying a Kalamazoo Stove or Range direct from the factory at lowest factory prices. Moreover, you get a stove or range not excelled by any in the world. We guarantee quality under a \$20,000 bank bond.

The Young Folks

A Place for You.
There's a niche for you in the world,
my boy,
A corner for you to fill;
And it waits to-day,
Along life's way,
For the boy with a frank, "I will!"
So, lad, be true,
The world wants you
In the corner that you may fill.

There's a niche for you in the world,
my girl,
A corner for you to fill;
For a girl that is kind,
With a pure, sweet mind,
A place that is waiting still.
So, lass, be true,
The world wants you
In the corner that you may fill.

The world has places for you, dears,
Has corners for you to fill,
And a work to do
Which no one but you
In God's great plan can fill.
So, dears, be true,
The world wants you
And your places are waiting still.
—Temperance Banner.

Washburn College to Have a Million Dollar Endowment.

At the anniversary of the founding of Washburn College, at Topeka, President Plass announced that the first \$100,000 of the proposed \$1,000,000 endowment had been raised. This endow-

ment movement was authorized by the trustees less than a year ago. The time set for completing the million is ten years.

The readiness with which the vigorous administration raised the first year's quota of the endowment, and the fact that this is added to the previously provided plant of \$600,000, is ample assurance of the success of the new forward movement.

Modern educational institutions always expend for the benefit of their students far more than the students pay. The excess cost is most surely and easily provided by an income-producing endowment fund. It is not to be doubted that the million proposed for Washburn will be followed by other millions in future decades, the number of these future millions depending somewhat upon the continuance of the vigorous and businesslike administration of President Plass which has now continued for four years.

The college at the Capital has a veritable endowment in one fact alone—the immense advantage of its location at the heart of the State's life and interests. Long-headed parents and their children in increasing numbers have been thinking out these manifest advantages and have wisely availed themselves of them. This commanding fact was clearly recognized in the letter read on Washburn Day from Justice David J. Brewer of the United States Supreme Court, who said: "Washburn is so situated that no other institution can be so fully in touch with the public life of the State, and at the same time reach all places within its limits

with the uplifting influences of the best education."

Attention does not need to be called to the fact that it is of immense advantage as a correction of theoretical acquisition to have at closest hand a great, active, civic and social laboratory to give the touch of reality to the book-learning. The capital city and its manifold public life preeminently furnish this.

But Washburn has not had to bank solely on its location to win its widening popularity. In the largeness of its spirit it has been as "catholic" as its life has been cosmopolitan. Built in the spirit that founded Harvard, Yale, Dartmouth, Amherst, Williams, Oberlin and so westward, it is, as they, essentially democratic. It is distinctively and aggressively Christian. On its faculty it has 22 Presbyterians, 11 Episcopalians, 10 Methodists, 6 Baptists, and so on, beside the Congregationalists. Broad-minded people are glad to patronize a school which is hospitable to all faiths, and which emphasizes the vital, essential things of a religious training.

There are ten buildings on the Washburn campus, and three more are in other parts of the city, one owned (the Kansas Medical College), and two leased (the Medical Dispensary, and the School of Law). All visitors, even the State Board of College Examiners, Chancellor Strong, President Nichols, President Wilkinson, and others have

just expressed their surprise and gratification at the fullness of the facilities for the best work which the college now offers.

George Washington.

When one reads the life of Washington and traces him along from early boyhood, we cease to wonder that he became so great. The very traits of character he showed and developed, would inevitably lead to something out of the ordinary. He was truthful as we all know, by the story of the little hatchet and other similar incidents. He was honest and industrious when in play or work. He was always a leader, not because he thrust himself there by force on account of superior physical strength alone, but because of the something within that asserts itself which we call strength of character.

He was thorough and whatever he did was done the best it could be done. When he was sixteen years old he and a young friend were sent out by Lord Fairfax, to survey a large tract of land owned by him. They lived in the wild woods roughing it for six weeks, and when they returned the Governor heard how well they had done the work, and he made George a public surveyor. The lines that he laid down were the ones used by the new States years after his death. He was brave. He was always found at the front in the fiercest battle, and was not afraid to go where he sent his soldiers. He was loved by all who knew him. Even the Indians loved and trusted him. It is truly said of him, "He was first in war, first in peace, and first in the hearts of his countrymen."

Heart Weakness.

Dr. Miles' Heart Cure has made many hearts well after they have been pronounced hopeless. It has completely cured thousands, and will almost invariably cure or benefit every case of heart disease.

Short breath, pain around heart, palpitation, fluttering, dizzy, fainting and smothering spells should not be neglected. Take Dr. Miles' Heart Cure and see how quick you will be relieved.

It cannot make a new heart, but will restore a sick one by strengthening the heart nerves and muscles, relieving the unnatural strain, and restoring its vitality.

"I had a very bad case of heart trouble. For six months I could not work. Last July I was plowing corn and feeling bad all day; in the afternoon in plowing one row I had to lay down, or fall down, three times. My heart throbbed as though it would burst through, and I had difficulty in getting my breath. I purchased a bottle of Dr. Miles' Heart Cure, and before I had used half of it I could lay down and sleep all night. Previously I had to get up from five to ten times a night. I have taken several bottles, and my heart is as regular as clock work. I feel like a new man, and can work considerable for an old man, 84½ years old."

H. D. McILL, Frost, Ohio.
Dr. Miles' Heart Cure is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails he will refund your money.
Miles Medical Co., Elkhart, Ind.

than for young people to have a manner of thoughtful deference for those older.

She should not have rested her arms on the table.

She should have been watchful as to the needs of those sitting either side of her. Her voice should have been distinct, but not loud. A friend of mine who has spent some time abroad, told me not long ago, that a French lady once said to her, "Tell me why it is that the American young girl has so fine a face, and so harsh a voice." So one of the things for my niece to cultivate is a sweet and well-modulated voice.

This reminds me of a delightful, old Kentucky gentleman, who was telling me of his first meeting with the lady who became his wife. "You should have heard her voice," he said, "I fell in love with her voice at first sight."

Another thing to guard against is self-consciousness. I suffered so intensely when I was a girl, from the fact that I could not forget myself, that it made me awkward and ill at ease, and spoiled many a pleasant evening for me. Timidity needs to be overcome, as well as too great freedom of manner. Another thing which offended me about this girl of whom I seem to be making an example, was that she referred to her gentleman friends more than once during the meal as, "the follows." This may have been some sort of new slang which I have not before heard. In any case it sounded rough.

Don't talk too much about the different forks and spoons beside your

Four of the ten buildings on Washburn College campus, rear view, from the dome of the Astronomical Observatory, looking toward the State Capitol, northeast, showing the Administration Building, MacVicar Chapel, Rice Hall, and the new Carnegie Library.

plate. This girl did. It's as old as the finger-bowl jokes and as lacking in fun.

It is more than likely that you will not always know which one you are expected to use, if it is a dinner of many courses. But you can keep your eyes open and watch your neighbors, and you are not apt to make any alarming mistakes about them.

Don't hurry; eat your food as if today and to-morrow were before you. This is another place where we Americans are making a mistake, and both our manners and our digestions are bound to suffer from it. We eat each meal as if the carriage were waiting at the door to take us to the train.

And finally, remember always, that we do not attend a dinner party wholly for the pleasure we may gain ourselves, but quite as much for the pleasure we may help to give others.

Young girls have a wonderful opportunity, Katharine. If they hold high standards themselves, and demand high standards in other people, society must needs feel the uplift.

There is nothing on earth so sweet and attractive, and altogether irresistible as a young girl—a young girl of the right sort.

"Standing with reluctant feet,
Where the brook and river meet
Womanhood and childhood fleet."

"Bear thro' sorrow, wrong and ruth,
On thy brow the smile of truth;
In thy heart the dew of youth."

Your loving and moralizing
AUNT KATE.

The Little Ones

"Things That S'prise You."
There's lots of things that s'prise you
When you're little just like I;
When you bump your head they tell you,
"Oh, you're too big to cry!"
But when there's pie for dinner,
And you want another bite,
The big folks say, "Oh, no, indeed,
You are too little, quite."

Then when there's company, you know,
They wash you up so clean,
And tell you little bits o' folks
Must not be heard, but seen.
But next thing that you know about
You hear 'em say, "Now, dear,
Stand up and say your little piece
For Mrs. Smith to hear."

That's just the way things s'prise you
When you're little just like I,
But I s'pose you'll understand 'em
When you're older, by and by.

—Exchange.

Little George Washington.

When George Washington was nine years old he wrote a little letter to his best friend, Richard Henry Lee, and here is a copy of the letter:

"Dear Dickey: I thank you very much for the pretty picture-book you gave me. Sam asked me to show him all the pictures, and I showed him all the pictures in it; and I read to him how the tame elephant took care of his master's little boy, and put him on his back, and would not let anybody touch his master's little son.

"I can read three or four pages sometimes without missing a word. Ma says I may go to see you and stay all day with you next week. If it be not rainy. She says I may ride my pony, Hero, if Uncle Ben will go with me and lead him.

"I have a little piece of poetry about the book you gave me, but I must not tell you who wrote the poetry.

"G. W.'s compliments to R. H. L.

And likes his book full well.

Henceforth will count him as his friend,

And hopes many happy days he may spend."

"Your good friend,

"GEORGE WASHINGTON.

"I am going to get a whip-top soon, and you may see and whip it."

No Tact.

Mistress—"Why did you leave your last place?"

Domestic—"Th' missus had no tact, mum."

Mistress—"Ah, I see. That is often the case."

Domestic—"Yes, mum. She was always tellin' me to do things, 'stead of askin' me to."

Have you ever had your day suddenly turn sunshiny because of a cheerful word? Have you ever wondered if this could be the same world, because some one had been unexpectedly kind to you? You can make to-day the same for somebody. It is only a question of a little imagination, a little time and trouble. Think now "What can I do to-day to make some one happy?"—Maltbie D. Babcock.

FAMOUS WOMEN.

Gail Hamilton.

I. A sketch of the author's life.
II. Reading from "Stumbling Blocks."
III. A writer for young folks.
IV. The story of "Wool Gathering."
I. "Gail Hamilton" is the name by which Mary Abigail Dodge is best known. She was a writer of many books, also editor of "Our Young Folks." She was associated with James G. Blaine's family, being a cousin of his wife, and it is said she was his advisor and he relied greatly upon her judgment. Hers was a very active, a brilliant and an interesting career.

II. Selections from "Stumbling Blocks" or any other of her many books may be read, thus catching a glimpse of her style, and a little insight into her character, besides the pleasure and knowledge to be derived from them.

III. A study of her life will disclose characteristics that show how adequately she was fitted to be a writer for young people. One must be peculiarly endowed to be successful in this line of writing.

"Wool Gathering" was written about thirty-five years ago and it was this book that first brought her into notice. She invested in a sheep farm in the West and lost all she invested, and this book was the outcome.

A Golden Rule for Clubs.

One of the things that the club is doing for women is the elimination of gossip. It gives her something beside personalities to think about, and helps her to be charitable to others. The following resolutions will be helpful in this direction:

"Whereas, we are all human and therefore love gossip, let us resolve:

"That we will cultivate a spirit of love and patience for every other woman in the club, as we wish it cultivated for us;

"That if we hear a word of criticism on another member, her words, actions or dress, we will not repeat it;

"That we will not answer such criticisms, except to say something good of her who is assailed;

"That we will make our club a place where helpfulness and kindness go hand in hand;

"That the Golden Rule is just as good a guide to club life as it is to home life; and that we will adopt it and practice it."

The editor of this department is very anxious to make it helpful to club members, and believing a woman's club to be one of the best uplifts to woman-kind, and a power for good in the home and the community, is desirous that many more such clubs be organized. If in any way this department may be more helpful, suggestions will be gladly received, and any information desired will be given, if possible. The names of clubs, a history of their work and anything that will be of interest to other clubs are requested. Papers that are especially interesting, read at clubs, and suggestions or club programs are very acceptable.

Royal Baking Powder Absolutely Pure

DISTINCTIVELY A CREAM OF TARTAR BAKING POWDER

It does not contain an atom of phosphatic acid (which is the product of bones digested in sulphuric acid) or of alum (which is one-third sulphuric acid) substances adopted for other baking powders because of their cheapness.

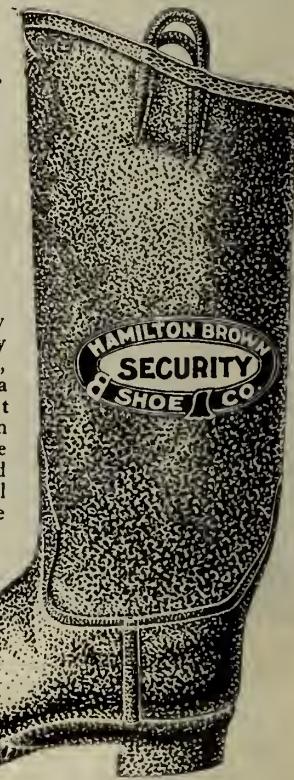

This Boot is Made for Good Hard Wear

Only the best new rubber and the best duck are used, put together in such a way as to give the greatest strength where it is needed.

Security LYCOMING DUCK BOOT

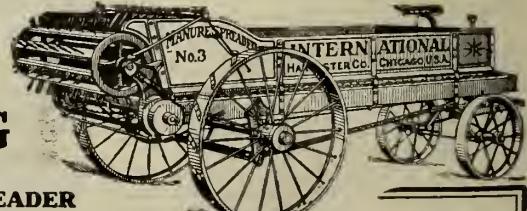

can't afford to wear out as soon as the ordinary kind—it's got a reputation to sustain. We strongly recommend "Security Boots" to Farmers, Irrigators, Stockmen, Fruit-growers and every man who needs a good boot. Like everything else, it will wear out, but it is built to give the greatest amount of satisfaction possible. Boots made of old rubber cannot stand the wear—there's a dollar's worth of pure rubber and good duck for every dollar spent in the "Security." All "Lycoming" Rubber Boots and Shoes are of the highest quality only.

Go to your dealer and try on a pair. Note carefully how well made they are. If your dealer does not have them in stock he can easily get them for you.

THINGS WORTH KNOWING

If you are going to buy
A MANURE SPREADER

No machine within his reach is capable of doing so much for the farmer as the modern manure spreader.

But then it must be a machine with features—features of economy and efficiency.

The I. H. C. Manure Spreader has such features.

Any man of experience knows that a spreader only works perfectly when the load is level.

The I. H. C. Spreader is the only spreader with a vibrating rake in front of the beater or cylinder which levels every load and any load of manure.

Any man knows that the apron operates better when power is applied at both sides.

The I. H. C. spreader apron is driven at both sides from both hind wheels.

This saves all torsion, binding, friction and undue strain, and consequently saves breakages and results in lighter draft.

One lever is better than many levers in operating any machine.

The I. H. C. spreader is the only spreader which is controlled and operated entirely with one lever.

It has ten different feeds—can be adjusted

instantly while in motion to spread three to thirty loads per acre.

Large, solid, steel axles front and rear—front wheels cut under—turns very short.

Steel wheels—no rotting or drying out. Broad faced tires with turned in flange to keep out dirt, mud, etc. Lightest and strongest.

Provided with traction lugs on rear wheels—will work perfectly on hard, frozen or wet ground.

Made in various sizes to suit all requirements.

The I. H. C. spreader will distribute perfectly manure of all kinds—wet, dry, mixed, strawy, full of stalks, frozen, caked, etc.

It may be equipped with special features known as lime and drill attachments for distributing broadcast, or in drills, fine manure, commercial fertilizers, lime, ashes, salt, cotton seed hulls, land plasters, etc.

Remember what we have told you—it is the manure spreader with special features which all make for success.

Go to the International Local Agent and look it over, get and read the catalogues or write for further information. It will pay.

Miscellany

Kansas' Greatest Year.

Agriculturally the year 1905 has been the most fruitful in the State's history, as shown by Secretary Coburn's invaluable report, and the worth of its farm products and live stock is the largest ever recorded for Kansas. It is greater by \$41,222,703, or 11.3 per cent than in 1904; is over twenty-eight million dollars more than twice as much as their value in 1896—ten years ago, and is considerably more than their combined values in the first two years of the past quarter century. For the first time the value of Kansas' agricultural productions and live-stock amount to more than four hundred million dollars—the nearest approach to this being in 1903, when the amount aggregated \$387,500,000. As suggestive of the present situation, it may be said that this year's wheat is worth more than that of any other year's crop; with one exception the same is true of corn, and the State is richer in live-stock than ever before.

The year's aggregate value of farm products and live-stock is sufficient, if equally divided among the State's inhabitants, to give each, whether adult or infant, \$264, and this, together with the per capita amount of over \$76 on deposit in Kansas banks, institutions patronized chiefly by farmers, indicates a degree of prosperity most substantial and gratifying.

WHEAT.

The total yield of wheat, winter and spring, of superb quality, was 77,178,177 bushels; this is over 12 million bushels, or 18.4 per cent, more than the output of 1904; sixty-two per cent greater than the annual average for the past twenty years, and is the fourth largest crop produced by Kansas. Its home value is given as \$53,871,624, showing it to be the greatest income-bringing wheat crop ever raised in the State, nearly 4.8 per cent greater in value than the 1904 crop, and \$1,445,269 more than the returns from the crop of 1903, which heretofore held the record for highest aggregate value.

That the Kansas wheat-farmer has been particularly prospered in recent years can well be concluded from the fact that in the past five years, ending with 1905, Kansas raised two wheat crops of over 90 million bushels each, one of over 77 million bushels, one of over 65 million bushels and one of about 55 million bushels, aggregating 381,344,039 bushels in the five years, worth \$237,457,229, or an average annual output of 76,268,808 bushels, worth an average of \$47,491,446.

The most valuable four wheat crops produced by Kansas have been raised in the past five years, as follows:

1901	\$50,610,505
1903	52,426,355
1904	51,409,255
1905	53,871,624

Of this year's crop 1,335,518 bushels is of spring wheat, a considerably larger quantity than is ordinarily produced, and its value is given as \$783,974.

Of winter wheat the area sown, as reported by assessors in March, was 5,835,237 acres. The largest yields per acre this year were in the eastern counties, in fifteen of which they ranged from 20 to 27 bushels, Lyon and Coffey reporting the latter. Thirty-three counties each had one million bushels or more, aggregating 70 per cent of the year's crop. The leading six counties in winter wheat, and their output, named according to rank in yield, are:

	Bushels.
Barton	4,999,335
Beno	2,910,670
Sumner	2,343,654
Pawnee	2,302,924
McPherson	2,232,464
Stafford	2,169,772

Correspondents report that last fall's sowing will aggregate about 5,900,000 acres, an increase from one year ago of 64,763 acres, or 1.1 per cent. Seventy-five counties, located in various portions of the State and more or less noted for their wheat-production report the same or increased areas. Calling

I Save You \$50

How My New Direct from Factory Selling Plan Gives You All Jobbers', Agents' and Dealers' Profits on Knodig Scales.

No Money Down—No Notes to Sign.
30 Days Trial—10 Years Guarantee.

My name is Gumbel, H. C. Gumbel.
I am Manager of the National Pitless Scale Co. of Kansas City, Mo.

I make the famous Knodig Pitless Scale, which for many years has been sold to Farmers, Stockmen, Grain Dealers, and others, through Jobbers, Agents and Retailers.

All scales, including the high priced, expensive Pit Scales, are still sold that way.

—But I have a new plan which saves the scale buyer all these middlemen's profits.

You now pay for the KNODIG PITLESS only one small profit, because you can buy it direct from the factory.

No other scale in the world is sold this way. If you question this statement, just write to any scale manufacturer and see how quickly he will turn you over to some agent or dealer.

But why should you pay more for the privilege of buying scales through a third party?

Does it make them any better to pay this extra profit?

Is there a single reason why you should not deal directly with the factory?

You buy Stoves, Incubators, Organs, Bug-gies, and a hundred other things that way—

—And save money by doing it!

Then, why not—Scales?

I will sell you a brand new 1906 model Knodig Pitless Scale direct from the factory for \$50, less than the price of a Pit Scale.

And it will be a better scale, too.

Because the KNODIG sets above ground, and all the working parts are inside the eight inch steel frame.

No pit is necessary, which saves you many annoying and expensive features, such as—

—Diggings and walling the pit.

—Renewing broken and rotted timbers.

—Dipping water and breaking ice.

—Replacing rusted parts caused by the dampness of a pit?

—Removing platform to get at the trash and dirt that constantly accumulate.

Old style pit scales may be all right for those who can afford them, and don't mind the

trouble and expense of keeping them in repair.

—But if you can save about half in price and have no pit to dig—no big lumber bills—no expensive carpenter jobs for foundations—

—Why shouldn't you buy a Knodig?

The KNODIG PITLESS is movable.

You can easily take it down and re-set it anywhere on the premises, wherever the work may happen to be!

It is as accurate as any high priced Pit Scale, because it is tested, as they are, according to the U. S. Standard of Weights.

KNODIG PITLESS SCALE bearings are made of black diamond and silver tool steel, proved by experience to be absolutely the best steel for the purpose.

The pivots are ground, gauged and tempered by expert scale makers.

The scales are sealed by an expert sealer.

And finally, to prevent any possibility of error, all KNODIG PITLESS SCALES are carefully passed upon by an Inspector of Weights, before shipment.

So, you see, they must be accurate.

We guarantee them unreservedly for ten years.

Other scales are guaranteed only on condition that heavy timbers must be kept in good condition, etc., etc.

I am willing to prove that the KNODIG PITLESS is the scale you want.

I will send a set to you, or to any responsible Farmer, Stockman, Elevator Man, or Grain Dealer on a month's free trial.

You have nothing to pay until you are satisfied,—no deposit,—no notes to sign,—nothing to do but give the KNODIG a fair, honest trial at my risk.

If it doesn't please you, just send it back, and I will pay freight both ways and the expense of setting it up on your place.

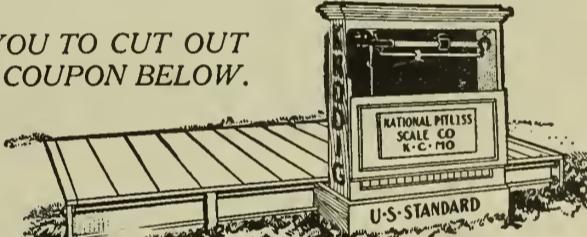

Surely this is a fair offer!

Address me personally. H. C. GUMBEL.

Double Manure Value.

EVERY man who has used a manure spreader knows that it doubles the value of the manure pile.

Those who have not had that experience will be convinced with the first trial.

It is not because the manure spreader puts more manure on the land, but because it tears apart, disintegrates and makes it fine that it all becomes available as plant food.

Of course it takes the right kind of a spreader to do this work perfectly.

The I. H. C. Spreader fits the case exactly.

It is not only an unusually strong, well built machine, thus being durable and continuing long in service, but it has features peculiarly its own.

For instance: It is the only manure spreader having a vibrating rake in

front of the beater or cylinder which levels the load as it passes backward towards the spreading mechanism.

You know, of course, that perfect spreading can only result when the load is level.

This spreader is entirely controlled and regulated in all its working parts by a single lever.

It will spread from three to thirty loads per acre, and the change necessary to produce these desirable results can be made instantly while the machine is in motion.

Power is applied to the apron of the I. H. C. Spreader from both sides—both rear wheels. This insures an even, steady feed and no strain, side draft or breakage.

The I. H. C. Spreader is equipped with broad faced steel wheels which are beat, because they are at once the lightest and strongest.

It will spread any and all kinds of manure in any condition, and can be equipped with special attachments for spreading in drills and broadcasting lime, compost, ashes, cottonseed hulls, land plaster, etc.

Made in several sizes to suit all classes of work and every section.

and look it over, get and read the catalogues, or write for further information. It will pay.

INTERNATIONAL HARVESTER CO. OF AMERICA, CHICAGO, U. S. A. (INCORPORATED)

LIGHTNING PORTABLE WAGON and STOCK SCALE

FOR SALE—80 acres Arkansas second bottom, 4 miles east of Great Bend. All in cultivation. Fine alfalfa land. Address R. C. Kansas Farmer, Topeka, Kans.

FIFTY farms in Southern Kansas, from \$15 to \$70 per acre; can suit you in grain, stock or fruit farms. I have farms in Oklahoma, Missouri and Arkansas for sale or exchange. If you want city property, I have it. Write me. I can fix you out. Wm. Green, P. O. Box 966, Wichita, Kans.

LAND FOR SALE in western part of the great wheat State. H. V. Gilber, Wallace, Kans.

832 ACRE FARM, McPherson County, 3½ miles from good town, close to school, 210 acres first bottom, remainder second bottom, up-land, meadow and pasture, excellent improvements, including fence, house, barn and out-buildings; fine bearing orchard, alfalfa, excellent water and timber. Price \$23 per acre. C. E. Carlson, Odd Fellows Building, McPherson, Kans.

FOR SALE—160 acre tract 6 miles N. E. of Council Grove, Morris County, 100 under cultivation, balance mow land. \$3,500. Easy terms. Eastman & Lakin, 115 West 6th Ave., Topeka.

FOR SALE—Dairy Farm in Loudoun County, Virginia. Between three and four hundred acres. Less than one and one-half hours' ride from Washington. Good railroad facilities. Outbuildings complete in every respect and in first-class condition. Good fencing. Large silo, filled for winter. Two dwellings on place for manager, etc. Good watering facilities with large storage tank. Excellent herd of cattle and well-equipped dairy. Good land and whole farm can be cultivated. Excellent opportunity to purchase first-class, well-equipped dairy farm. M. V. RICHARDS, Land & Industrial Agent, Washington, D. C.

a satisfactory stand and healthy condition 100, the general average of the growing wheat for the State is now 80.4. Five counties in the eastern third of the State have conditions of 100 or over, and in fact the best conditions prevail throughout the section named, most of the counties reporting 90 or better. Soil and weather in some portions of the State were quite favorable for sowing, and since for germination and growth; in others opposite conditions existed, owing to the lack of sufficient moisture. Notably is this the case in about twelve of the prominent wheat producers and to a greater or lesser degree in localities here and there in other counties, for the most part confined to a block of the State's area 150 miles square measuring westward from the eastern border of Republic County, which includes the twelve counties before mentioned. Norton reports the lowest condition, 54, and Trego next with 58. The presence of insects is noted in some fields, but so infrequently as to cause little, if any, apprehension.

CORN.

The corn crop amounts to 190,519,593 bushels, the largest since 1902, and 58,500,000 bushels more than that of 1904; its value is \$68,718,584, which, with one exception, is the most valuable corn crop produced in the State. The corn, by more than one million dollars, outvalues that of the year's wheat, oats, rye, buckwheat, broomcorn, flax, and Irish and sweet potatoes combined. Thirty-two counties, all except three in the eastern third of the State, report yields per acre of 30 or more bushels, the highest being 38 in Wyandotte, followed by Brown, Jefferson, Leavenworth and Miami, each credited with 35 bushels per acre. Forty-three counties show aggregate yields of 2 million or more bushels each, Jewell leading (as last year) with 6,241,952 bushels; Marshall coming next with 6,173,898 bushels; Nemaha third with 5,863,854 bushels; Washington fourth with 5,162,940 bushels and Republic fifth with 5,074,080 bushels.

The area devoted to corn this year was 6,799,755 acres, an increase over that of 1904 of 305,597 acres, or 4.7 per cent. The average yield per acre for the entire State was 28 bushels.

SORGHUMS GRAIN AND FORAGE.

The non-saccharine varieties of sorghums have all increased in acreage, while the sweet sorghums show a decrease; the combined value of these is \$8,107,135.

HAY AND LIVE-STOCK.

Tame and prairie hays yielded well and in quality are probably above the average. The returns indicate a larger supply of hogs than one year ago, and from no quarter is disease reported among live stock.

KANSAS CROPS AND PRODUCTS IN 1905.

The yields and values of the year's crops and products are as follows:

PACIFIC COAST WONDERS.

How \$100,000 Is Being Spent in a Campaign of Enlargement.

The spending of \$100,000 is an interesting event, no matter who spends it or for what aims, but when it is devoted in an almost philanthropic way to the enlargement of those who seek better health, or new pleasure, or perfect rest, it is indeed worthy of remark.

The Sunset Magazine, that marvelous reflex of western life, published in San Francisco, recently contracted with N. W. Ayer & Son, the great advertising house, of Philadelphia, to spend \$100,000 in telling the people of the wonders of that scenic country extending from Los Angeles, California, to Portland, Oregon, now so easily accessible via The Coast Line and Shasta Route of the Southern Pacific Company.

To convey this message in such a graphic manner that every one everywhere would have a true mind-picture of the amazing things to be found in this land of perennial sunshine, required all the resources even of N. W. Ayer & Son, a veritable army of photographers, artists and writers, working hand in hand in preparing pages upon pages of interesting material for the great magazines and periodicals. When it was found that even this great space was too limited to tell a tithe of the story, a beautiful book was published for free distribution, containing rare color prints, fine engravings and most vivid pen pictures. "The Road of a Thousand Wonders" is the title of this book, and it is indeed well worthy of the name, for on its pages are depicted all the veritable wonders of California and Oregon, including the Home of "Ramona," the heroine of Helen Hunt Jackson's famous romance; the old Spanish Missions still used by the sombre-robed monks; the mysterious Cypress Forest on the great Seventeen Mile Drive; the historical town and bay of Monterey; the rose bushes that climb telegraph poles in midwinter; the pyramids of the Santa Lucia Mountains; the nature baths of Paso Robles Hot Springs; the orange and olive groves, the endless sea of blossoms that makes Japan look like a pea-patch; the Big Trees of Santa Cruz, the oldest living things on earth; the glories of the Sacramento Valley; the grandeur of snow-capped Shasta, and the inexhaustible game preserves of Oregon.

All this and so much more is described in this remarkable book—more remarkable when it is considered that

it has no price, and that any one may have one by writing to the distributor, Chas. S. Fee, Passenger Traffic Manager, Southern Pacific Company, 431 California street, San Francisco, California.

100,000 ACRES OF IRRIGATED LAND

in Sunny Southern Alberta, Canada

THE LAND OF WINTER WHEAT, ALFALFA AND SUGAR BEETS

These lands are part of the great irrigation project constructed by the Canadian Pacific Ry. in the CALGARY DISTRICT OF SOUTHERN ALBERTA. We now have ready for the farmer one hundred thousand acres of these lands, lying on the northern side of the main line of the CANADIAN PACIFIC RAILWAY at Gleichen, extending back ten miles in a solid block,

at from \$18.00 to \$25.00 an Acre

The canals and laterals are to be maintained forever by the Canadian Pacific Ry. at a nominal cost of \$2 cents per acre per annum.

NO FLOODS, NO DROUGHTS, EVERY YEAR A HARVEST YEAR

This too on land that will produce 30 to 60 bushels of hard winter wheat, 80 to 100 bushels of oats to the acre, with enormous yields of alfalfa, sugar beets and all small grains. Remember, the lands are all adjacent to the main line of the Canadian Pacific Ry., giving easy access to the world's best markets. For further particulars and certificate for low railroad rates, write

Canadian Pacific Irrigation Col'n Co. Ltd.

CALGARY, ALBERTA, CANADA.

Stand Up for Osborne County

In the great Solomon River Valley, the richest section of the Northwest. The best all-purpose county in the State. The home of Alfalfa, the king of all grasses, where land values are always increasing, where prices now are very low. The most productive soil the sun ever shone upon, ideal climate, abundance of pure water and timber. Prices \$10, \$15, \$20, \$25 and \$35 per acre. These prices will double inside of two years. Write me for full particulars and list of farms.

**A. L. BROWN, (the man who sells Osborne County lands),
Osborne, Kans.**

We do not deal in extreme Western lands, hot air, hot winds, sand, sage brush and blue sky, but handle Osborne County lands, exclusively. That's what makes our business grow. Mention Kansas Farmer when you write.

Western Kansas Wheat Farms

Deal with the owner direct. Save commissions. Know you are getting your land at the right figure. We own and control 60,000 acres of the finest wheat and corn lands in central and western Kansas. We have one price for everybody. You can buy a farm on ten years' time with interest at 6 per cent, or you can pay cash and get 5 per cent discount. Our farms are bargains, every one of them, and are in the best counties of Northwestern Kansas; close to schools, railroads, towns and churches, in well settled localities. If you have \$300, you can own a farm and home of your own. No poor land.

The Grain Belt Realty Company, Concordia, Kansas

Getting What You Want

We all want a pleasant and prosperous home. This we have ready for you. We are subdividing and selling the splendid Los Molinos Ranch of 40,000 acres in the famous Sacramento Valley of California.

We have every combination to insure you success. Soil is smooth and richest sedimentary deposit. Climate so mild every month can be used for planting and growing crops and fruits.

Water shortage unknown, a dry season unknown.

All who see our lands are enthused. Come and look over our crop, garden and fruit lands. You will locate with us if you do.

Send for our booklet. Write for particulars. It will pay you. Address

LOS MOLINOS LAND CO., 305 WASHINGTON STREET, RED BLUFF, CALIFORNIA.

AT KENNEWICK ON THE COLUMBIA.

The ideal climate, winters warm and balmy.

Under the Great Northern Pacific Canal.

The choicest irrigated land in the West.

Own a ten acre fruit ranch and be independent.

Why work for others; be brave and do as thousands have done before you. These men have not made a mistake in coming here, many are independent.

We produce the earliest fruit, berries and grapes grown in the West.

It is all that we claim for it. Write to

KENNEWICK LAND CO., - - - KENNEWICK, WASHINGTON.

NAMPA, IDAHO

A railroad center of Southern Idaho, surrounded by 300,000 acres of magnificent farming and fruit lands. Only one-fourth of these lands are under cultivation. The UNITED STATES GOVERNMENT has appropriated \$11,000,000 to develop the water supply and work will begin in February this year. A beet sugar company has secured contracts on 6,000 acres of land and are now erecting a \$1,125,000 factory within the city limits and will handle the crop of 1906. We have just built an alfalfa meal plant to grind up the surplus hay and ship it away in sacks. A brewery company has just secured a site and will put up a \$30,000 plant. This will help the hop industry. A flour mill company is seeking a site and one will soon be located. You can not fail to see that all of these enterprises locating at the same time in a town of about 3,000 people will double and thruple its population in the next two or three years. We raise 5 to 8 tons of alfalfa per acre, 300 to 500 bushels of potatoes, two crops of timothy and clover, 20 to 60 bushels of wheat, 60 to 100 bushels of oats, 50 to 70 bushels of barley. All fruits raised to perfection. Write the NAMPA CHAMBER OF COMMERCE.

SNAKES

are not found in the SNAKE RIVER VALLEY, but here is found the most beautiful tract of agricultural land in the United States, and you do your raising, and have no failures of crops, that's irrigation. No cyclones or blizzards. This country needs live, wide-awake men, who wish a new home in the rapidly developing west, and offers cheap land, good church and school facilities, and a chance to make money to those who are willing to work. St. Anthony, the County seat of Fremont County, Idaho, is a bright and growing town in the very heart of a rich and growing richer country, and if you wish reliable information in regard to prices, soil, climate and our prospects, write any of the following firms: First National Bank; C. C. Moore Real Estate Co.; Wm. D. Yager Livery Co.; Murphy & Bartlett, Cafe; Commercial National Bank; C. H. Moon, Farmer; Chas. H. Heritage, Riverside Hotel; Miller Bros., Grain Elevator; Hale & Shell, General Merchandise; Chas. S. Watson, Druggist; Gray & Rose, Townsites; W. W. Youmans, Harness Store.

Address, RATEKIN'S SEED HOUSE, Shenandoah, Iowa. (The largest Seed Corn Growers in the World.)

Try the New Majestic Tomato
The greatest vegetable novelty of the season. By all odds the largest, finest flavored and most productive in existence. Thousands of our customers have written us that it surpassed all others and produced 100 lbs. to 147 lbs. of fruit to the plant. Many reported single matatos, weighing 3 lbs. to 6 lbs. each. Just think what this kind of crop would mean on an acre of ground. The fruits are not coarse grained and poor like other large sorts, but are smooth, solid, have few seeds, and are unsurpassed in quality. Of fine shape and beautiful color. The first season the seed sold at 40¢ a packet of 100 seeds, but this season we have reduced price to 15 cents, and in addition to this we are offering \$100.00 in Cash prizes this year on them. Our large illustrated catalog describing the above and many other choice novelties will be sent free if you mention this paper. IOWA SEED CO., Des Moines, Iowa.

means of growing many trees besides a vast amount of garden vegetables.

Rice County. G. BOHRER.

Honey Locust—Celery.

EDITOR KANSAS FARMER:—Please answer the following questions in the KANSAS FARMER:

When and how should black locust and honey locust seeds be planted?

Will frost injure celery? S. J. Osborne County.

Locust seed if planted in the spring should first be scalded with hot water near the boiling point, but if planted in the fall no such preparation is necessary. Drill the seed in rows three to three and one-half feet apart; firm the soil above the seed by patting with back of hoe, or otherwise as may be convenient, leaving them at the depth of about one-half inch. Select such ground as would grow good corn and have it as free from weed seeds as possible.

Celery will stand a sharp frost, say a temperature of 22°, but should not be handled while frozen. A degree of cold ten to fifteen above zero will destroy it.

Fox Squirrels—Birds and Fruit.

EDITOR KANSAS FARMER:—We have plenty of what they call fox squirrels here. They are great on sweet corn when in the roasting-ear stage; they also help themselves to corn in the crib and take care of all the walnuts.

We also have many fruit-eating birds. They will not let a cherry or grape get ripe if they can help it. We have a good many rats here. I would rather feed rats on corn than feed birds on fruit. Now, if one is protected by law, why not protect all three? for one is as good as the other as far as usefulness is concerned. Our apples are nearly all wormy in spite of all the birds that are here. Do we not have a right to protect our crops, law or no law?

R. REICHERT.
McPherson County.

There are many firms now selling seeds of all kinds, but few of them produce all of the seeds they sell. W. W. Vansant & Sons of Farragut, Ia., is one firm that is an exception to the rule. This firm owns its own farms and produces every grain of seed-corn that it sells. The members of the firm personally oversee the sorting and preparation of all of their seed for shipment. The man who buys seed-corn of W. W. Vansant & Sons may rest assured that he will get the best seed that can be produced and that which has been selected with the utmost care.

Red Cedar.

Editor Kansas Farmer:—I have some evergreen seed (I think they are Arbor Vitae), a sample of which I enclose, and wish to know if they are likely to grow, also the time to plant and if they need to be put in the ground and let freeze. They seem to be hardy here and if I can successfully raise them from seed, they will prove a good thing for this bleak prairie.

Gray County. S. E. BARTON.

The seed sent are from the red cedar. Arbor Vitae would hardly grow successfully in your neighborhood. These seeds, if planted in the spring, would grow, but are slow to germinate. If soaked in a lye of sufficient strength to remove the outer resinous covering, the length of time necessary for sprout-

ing is about two months.

REAL SEED CORN
Graded or Crated ON APPROVAL
Your money's worth or your money back. How would you like to have some Real Seed Corn?—the real pedigree kind?—selected and graded so it will drop 90 per cent corn in an edge drop planter?—or shipped in the ear crated, on approval, guaranteed to suit you or your money back?
I grow it in my store. It is in a modern seed house and select it carefully. Besides seed corn I sell all kinds of seed—garden seed, seed potatoes, flower seed, clover seed and they are all tested and guaranteed.
Send for my catalog. It's free, and I will add samples of garden and flower seeds and 10 kinds of seed corn, if you care to put up the postage for them.
Write today.

PRESIDENT ROOSEVELT SAYS:

"There may be some place in the world equal to Puget Sound, but I don't know where it is."

Best year-around climate in the United States. Fertile soil and immensely rich and varied resources.

Send 4c for finely illustrated 64 page free booklet on this wonderful section of the United States.

Chamber of Commerce, Everett, Wash.

ing would be shortened; otherwise some of the seed would not grow until the second year. If the seed be kept until fully dry, they lose their germinating power.

This tree is sometimes propagated from cuttings, taking new shoots growing from old wood. To get the very small trees growing from seed in the natural groves of cedar, plant them in nursery rows and cultivate until large enough to transplant where wanted permanently, would be best.

However raised, the small trees will need protection from the hot sun for at least the first year. Success in transplanting evergreens depends very much on keeping the roots always moist.

WALTER WELLHOUSE.

The Teneriffe Canary grass is being introduced this year by the Iowa Seed Co., of Des Moines, Iowa, and feeling sure that our readers will be interested in this crop, we have made arrangements with them to mail a small sample of the seed to you free, if you mention this paper in your request, and they will also send with same directions for cultivating, and a copy of their large illustrated catalogue which describes many other choice novelties in farm, vegetable and flower seeds. Do not get this confused with other varieties of Phalaris which produce a similar grain but are inferior in productiveness and quality. If you are going to try it, insist on having the true Teneriffe Canary grass-seed.

A Big Tomato.

Last year when Mr. J. R. Lawrence, the noted horticulturist and experimenter of Massachusetts, reported that he had grown one of the Majestic Tomatoes which weighed 5 1/2 pounds, we thought that surely the limit had been reached, as before the introduction of this grand new variety 2 1/2 to 3 pounds was considered the largest weight possible. During the past season \$100 in cash prizes was offered and all of the five prize-winners grew specimens weighing over 6 pounds each. Mrs. Amelia Cronin, of Akron, Iowa, has a

scheme for growing large specimens, which proved very successful and will undoubtedly be of interest to some of our readers. She says: "Enclosed find my report which is signed also by two witnesses who saw the big tomato weighed. I planted the Majestic tomato to seed in February in a box of soil in the house, and when about two inches high, transplanted to another box. At proper season I set them out on a very rich piece of ground where a straw pile had been burned and the ashes raked in. The plants were watered every night and when about 18 inches high, I cut the tips off and by allowing only 2 or 3 fruits to ripen on some of the plants, it threw all the strength to these fruits. The largest specimen weighed 7 pounds 7 ounces, and there were several which weighed over 5 pounds each." Some plants of the Majestic tomato have produced 145 to 160 pounds of fruit. Just think what that kind of a crop would mean on an acre of land. They are of such large size and so productive that they are attracting general attention. This new variety is being introduced by the Iowa Seed Company of Des Moines, Iowa, who are again offering \$100 in cash prizes on them and we hope our readers will compete. Better write them to-day for a copy of their large illustrated catalogue of garden and farm seeds, which will be sent free if you mention this paper.

Premium Offer.

J. D. Ziller, Hiawatha, Kans., writes the Kansas Farmer as follows: "I have determined to make it an object for every progressive farmer to plant pure-bred seed-corn. Every purchaser of two bushels or more of any one of my four varieties of pure-bred seed-corn will be entitled to enter the contest, and to the one who has the largest yield of corn from one acre of ground, I will give one new Victor Corn Planter Drill and Check-rower complete, value \$45; ground to be measured and corn to be weighed. All orders for corn and entries must be in before March 1, 1906."

Please mention the Kansas Farmer.

Great Rose Offer by One of Our Advertisers.
It is not often that a seed firm makes such a liberal offer as that of the A. A. Berry Seed Co., Clarinda, Iowa, found on page ... of our paper. They are sending to our readers a beautiful rose bush, a packet of vegetable seed and their fine seed book, all for 10 cents, which covers the cost of packing and postage. This firm is one of the big seed firms of the country and handles a very extensive line of field, garden and flower seeds. They are perfectly reliable and will make good. They are seed-growers. Mr. Berry, who has always been a farmer, still lives on a farm—and some of their warehouses are located on their extensive farms. Send to-day for their great offer.

The Poultry Yard

A Few Figures on Poultry and Eggs.

We give the figures for four years as found in the Year Book of the Department of Agriculture for 1904. Going through these figures and getting an average, we find the average wholesale price for eggs in Chicago, for the year 1900 was 14½ cents; for 1901, 16 cents; for 1902, 20 cents; for 1903, 17 cents; for 1904, 20½ cents. With the single exception of 1903, every year has shown a decided increase in the average price, and 1904 made up for this by showing a better average than any previous year.

Probably the most potent factor in keeping up the price of summer eggs is the increased capacity of cold storage houses, where thousands upon thousands of cases of eggs are stored from March until winter. Competition among speculators keeps prices above what they would otherwise be. It is claimed that cold storage keeps the price of eggs down in winter. This may be true to a certain extent, but as a large portion of the hens of the country do not lay in winter the price of fresh eggs in winter is bound to be high enough always. The cold storage speculators buy when eggs are cheapest and when the price would be very low if they were not in the market. They secure to those people who would never get eggs in winter a price at least five cents in excess of the price they would receive under the old order of things. On the whole, cold storage is beneficial and has been the means of making the production of eggs more profitable.

Another reason for increasing prices is that the supply does not keep pace with the demand. There has been no glut in the egg market of late years. A largely increasing population creates a larger demand for eggs. And then, too, the people who live in cities and towns understand that eggs are cheaper than meat, and use them largely in substitute for that commodity. And the people who produce the eggs use more of them. Every condition which has made the price of eggs and poultry as meat high in the past, promises to continue long in the future, making the prospects for poultry and eggs better than ever before.—F. W. Brooke in The Gleaner.

Poultry Notes.

N. J. SHEPHERD, ELDON, MO.

A good layer ought never to be sacrificed as long as she can be used for breeding-purposes, and the selection of such hens as breeders would soon result in the improvement of any stock.

Exercise such as a good forage ground affords a flock of poultry is a great health promoter, and the lack of forage ground, causing the feeding of the flock to excess, soon has a tendency to bring on many ailments among the flock.

Ducks often commence to lay when six months old and the eggs from such ducks will hatch; and while it is often the case that good results are obtained from young breeding ducks, yet it is best to use drakes that are one year old with them, allowing one drake to every five or six ducks.

The great trouble in raising young turkeys is in the first few weeks of their lives. As a rule they are overfed while young with food not adapted to them, and not kept warm and dry, but allowed to get wet and chilled. Keep them in a pen or small yard with good shelter convenient so as to be protected from chills; feed regularly, but be careful not to overfeed.

The objection to using corn as an exclusive feed for poultry is that it is deficient in lime, and contains an excess of carbon, which promotes the laying on of fat, which is not favorable to egg-production. Corn can nearly always be fed at night to advantage, and especially during the winter; but one other kind of grain or food should be given in the morning and at noon.

One ounce of crude carbolic acid dissolved in a quart of water is not expensive and can be used freely. A teaspoonful of this solution put in every gallon of the drinking water will prevent many diseases due to contamination of the water and especially so when the sick fowls are compelled to drink from the same source as the others. It is an excellent remedy for roup, and when used in the whitewash or sprinkled in the pens it is a good disinfectant.

It takes a certain amount of food to keep the animal machine running and the profit comes in according to the supply of food permitted over and

POULTRY FEEDING AND FATTENING

A handbook for poultry keepers on the standard and improved methods of feeding and marketing all kinds of poultry.

The subject of feeding and fattening poultry is prepared largely from the side of the best practice and experience here and abroad, although the underlying science of feeding is explained as fully as possible. The subject covers all branches, including chickens, broilers, capons, turkeys and waterfowl; how to feed under various conditions and for different purposes. The whole subject of capons and caponizing is treated in detail. A great mass of practical information and experience not readily obtainable elsewhere is given, with full and explicit directions for fattening and preparing for market. The broad scope of the book is shown in the following

TABLE OF CONTENTS

Thrifty Growth, Expert Chicken Feeding, Broiler Raising, Nutrition for Layers, Special Foods, To Finish and Dress Capons, The Art of Poultry Fattening, Lessons from Foreign Experts, American Fattening Methods, At Killing Time, Preparing for Market, Marketing Turkeys and Waterfowl, Finish and Shaping.

Profusely illustrated, 160 pages, 5x7 1/2 inches cloth. Price 50 cents postpaid.

SCOTCH COLLIES.

SCOTCH COLLIES—Scotch Collie pups from registered stock for sale. Emporia, Kennels

The Louse Question

When your animals rub incessantly at this season of the year, look out for lice. This is especially true of calves and colts. To meet this condition Dr. Hess (M.D., D.V.S.) formulated the famous Instant Louse Killer, which kills lice on stock and poultry.

INSTANT LOUSE KILLER

Kills ticks on sheep. It, being a powder, can be applied in zero weather. Do not wait for warm weather; do not let the tick eat up your profits; kill him on the spot with Instant Louse Killer. Put up in round cans with perforated top, full pound 25 cts. Sold on a positive written guarantee. Be sure of the word "Instant" on the can; there are 25 imitators.

1 lb. 25c { Except in Canada
3 lbs. 60c { and extreme

Take Your Own Time. Old Trusty Incubator

40, 60 or 90 Days Trial.

We want to send you the "Old Trusty" Book. You ought to read it before buying an incubator, because it has more every-day "chicken sense" in it than any catalog you have ever seen. 300 good pictures. It tells why "Old Trusty" does such good work—why it hatches so many and so good chicks—why it is so easy to operate—why it is so economical. It's sold on 40, 60 or 90 days trial, freight prepaid. Write to us.

M. M. Johnson Co., Clay Center, Neb.

WHY HENS DON'T LAY

When well cared for and well fed, it is because they need waking up to start egg production. This comes naturally in the spring—the natural mating season. In winter you have to give something to stimulate them. Without this they are stupid, lazy and dull.

Mix SECURITY POULTRY FOOD in their rations. It will give them life and activity and shortly your hens will be laying. Don't wonder why they don't lay, but get Security Poultry Food from our dealer in your town and feed it.

WE WILL REFUND YOUR MONEY
If you are not entirely satisfied.

SECURITY STOCK FOOD CO., Minneapolis, Minn.

above the amount necessary to keep them in good condition. On the other hand, there is a point where the right kind of food may be fed unprofitably and an overplus of fat produced; fowls so fed become inactive, and the eggs will not hatch well, neither will chicks come out with sufficient vigor to make them easily brought up.

Poultry Show Notes.

W. H. Maxwell of Topeka had a very fine exhibit of Buff Orpingtons and Buff Leghorns at the show. The birds were among the best and he was awarded many premiums. Mr. Maxwell is also an extensive breeder of squabs.

The display of Brown China Geese by O. C. Sechrist of Meriden, Kansas, was one of the interesting features of the State Poultry Show. "When we commenced raising them," said Mr. Sechrist, "we, like most farmers, were afraid we would not like them, but we soon found that they had been slandered. They are not vicious or quarrelsome with other poultry. They are easy to raise and lay more eggs than any other variety. Their flesh is not oily or soft, but is firm and gamey in flavor. In my opinion no other goose is as handsome in the show room.

The White Holland turkeys exhibited by Miss Lillian Schaal of Lexington, Mo., attracted a large crowd of spectators at all times during the show. Several of her birds exhibited were prize-winners at the St. Louis World's Fair.

R. F. Young, of McPherson, is one of those pleasant gentlemen who help always to make the poultry show a successful as well as an enjoyable event. He is a breeder of White Leghorns and had the largest individual poultry exhibit at the meeting. He always succeeds in carrying away his share of ribbons.

Mrs. W. P. Popham of Chillicothe, Mo., carried away many prizes during the show. Her exhibit of Acme strain of Bronze turkeys was very fine, and she impresses every one whom she meets with the fact that she understands the poultry business thoroughly.

A Free Book Worth Having.

There is a free book called "How to Save One Half" sent out by the H. M. Sheer Co., Quincy, Ill., that tells exactly how to construct high-grade incubators and brooders from the very first mark of the pencil up to the adjusting of the regulator preparatory to setting the eggs. Every detail of construction is shown clearly in a series of over eighty half-tone photos arranged in the order of each consecutive operation.

This book is especially valuable to "Beginners" and tells them how to avoid mistakes and failures in hatching eggs artificially by selecting reliable apparatus. It is a condensed encyclopedia for every poultryman, big, little, amateur, or the "old hand."

This book also explains the life-work of Mr. Sheer, the well known incubator specialist, inventor of the Acme Automatic Lamps, and Acme Automatic Regulators and Thermostat. He has spent eighteen years in perfecting these and other incubator and brooder appliances, until he is now a recognized authority in this country and abroad.

Incubator users, provoked by the cranky actions of their regulators on lamps, should not consign their machines to the scrap heap. Write for this catalogue and see how many a man has saved his incubator and got big hatches by following Mr. Sheer's advice.

At the Louisiana Purchase Exposition the jury of awards, in giving the highest honors to the Cyphers Incubator, called it a "perfect incubator." Even before this jury had an opportunity to pass upon its merits the Cyphers was considered the standard after which

others might pattern. With such a reputation in the minds of the people its future seemed assured without any effort on the part of the manufacturers toward improvement. Much surprise was felt and a great deal of curiosity aroused when the manufacturers announced that, as the result of their past experience and their inventive genius, the Cyphers incubator for 1906 would contain no less than 18 distinct points of improvement over that of 1905. These have all been kept secret until the manufacturers were ready to place the 1906 model on the market. Now they are all explained in the new catalogue which is a book of 222 pages and every one of them of value. Your local dealer can show you these 18 points of improvement but it is better to have the catalogue also. It is free to readers of the Kansas Farmer.

DON'T SEND EAST for your Single Comb Brown Leghorns. In four shows this season these shows have had highest scoring bird in the show. Scores as high as 95% by Owen and Atherton and 94% by Rhodes. Stock for sale. Eggs \$1 for 13; \$6 for 100. CHAS. C. SMITH, Manhattan, Kans.

The Best CHICK MOTHER on Earth and YOU can TRY IT 60 Days FREE

We don't ask you to believe anything. We ask you to let us prove what we say.

Let us send you a Sure Hatch Incubator, at our own risk, freight prepaid.

Use it two months in your own home. If you don't find it all we claim, send it back at our expense.

Could we do more than that?

Yes, we do more. We guarantee every Sure Hatch Incubator for 60 days, 6 months; or for 6 years, if you prefer.

They are always on trial. We stand ready to make good any fault of ours at any time—now or ten years from now.

We know what we are talking about when we say Sure Hatch Incubators are the best.

For there are over 80,000 in use right now. And they are hatching all hatching eggs put into them.

Sure Hatch means a chicken from every good egg.

The success of the Sure Hatch sells more of them each year than are sold of any other make.

Sure Hatch prices run from \$7.50 to \$17.50—capacity 75 to 200 eggs to a hatch.

Our big FREE catalogue explains why we can give you the biggest Incubator value ever offered.

Send for it today.

It contains facts worth money to every poultry raiser. The information it includes will put dollars in your pocket.

It tells the best ways to hatch, feed, raise and market poultry.

Its 100 pages are filled with illustrations, Poultry House plans, and figures that mean a lot to you.

A post card with your name and address brings it.

Remember, no ordinary mail order house can offer you an incubator like the Sure Hatch at any price.

No dealer can sell you anything as good, no matter how much he charges.

MACHINE OIL

\$3.50 A BARREL

You will find it a better machine oil than anything you have been buying for 35 cents to 45 cents per gallon. Premium Oil is a natural oil, greenish black in color. There is no made oil that is superior to Premium Oil for engines, shafting, shops, elevators, thrashing machines and farm machinery. It will not GUM, has good body, is not affected by hot and cold weather as most oils are. If a farmer, you say you won't need as much as a barrel. Get your neighbor to take half of it. But remember \$3.50 for a 50-gallon barrel, and the empty barrel is worth at least one dollar; gives you oil at less than 6 cents per gallon at your railroad station. If within 300 miles in Kansas freight will not be over 75 cents per barrel. Sample sent on request.

Dairy Interests**Alfalfa and Other Soiling Crops.**

The Pennsylvania State College reports on experiments with several soiling crops the following summary:

Of the various crops grown in the tests made during three years, sorghum and cow-peas produced the largest yield of green substance per acre. As a green forage, this crop was most satisfactory; the cows ate it well and, everything considered, it proved a most satisfactory soiling crop, particularly, as it can be grown after a crop of rye or of oats and peas has been removed.

Alfalfa produced the greatest weight of air-dry substance per acre. As a green forage, this crop was entirely satisfactory, and is recommended wherever alfalfa can be grown successfully.

Alfalfa produced the largest weight of protein per acre of any crop, even larger than the combined crops of red ripper cow-peas and peas and oats, which were grown on one plat during the season.

Corn, as a single crop, ranks second in the production of air-dry matter per acre. If, however, sorghum, cow-peas and rye are combined, as these two were grown on the same land during the same season, they would rank first; alfalfa, second; corn, third.

Sorghum and cow-peas, as a single crop, was entirely satisfactory. This combination gave a large yield of nitrogenous food which the cows consumed with much relish. From a feeder's standpoint, few objections could be made to this crop.

Canada field-peas and oats make most satisfactory soiling crops. They are among the earliest crops to ripen and are consumed by cattle with relish. If larger amounts are grown than are required in soiling, this crop may be readily cured into a fine quality of hay which will make a good substitute for, and in many instances will equal, prime clover hay. A satisfactory crop of cow-peas may be grown on the same land after this crop has been removed.

While flat peas produce large yields of nitrogenous soiling crops, yet they are not recommended; first, on account of the difficulty in establishing the crop; second, the crop is not relished by cattle; third, there appears to be

cost of a ration might be reduced to a minimum by producing on the farm a considerable proportion of the protein required, thus diminishing the expenditure for protein in the form of concentrates.

This test includes not only the production of the various crops, both as to quantity and quality, but the feeding of them to dairy cattle and their effect on milk and butter production as well. This test may be considered a continuation of similar tests that were made during the seasons of 1902 and 1903. The results of the former tests have already been published, that of 1902 being described in Bulletin No. 65, and that of 1903 in the Annual Report for 1903-1904. The test described in these pages was made with the following crops, which were fed to five cows:

Flat peas; peas and oats (three sowings); peas and barley; clover silage; cow-peas and milo maize; black cow-peas; red ripper cow-peas.

Some of the objects in making these tests were to determine, as far as possible:

Yield of green forage per acre of the different crops; yield of dry matter per acre; yield of protein per acre; length of time from sowing to feeding; amount of forage produced per acre during the season; effect of the different crops upon the milk-production; amount of various crops the cows would consume daily; area of each crop that would be required to give a stated number of cows sufficient green forage.

THE PREPARATION OF LAND AND SEEDING.

With the exception of the flat peas and clover silage, the forage crops were sown at intervals from May 5 to June 25. These crops were sown on comparatively small plats, but with an ordinary field grain drill. The land in all cases was plowed and harrowed sufficiently to make a good seed-bed. Such preparation was given as would have been considered good preparation for ordinary spring grain. In brief, the crops were sown under what would have been called good field condition.

May 5: A plat was sown to Canada field peas and oats. The peas were sown first and drilled in at the rate of seven pecks per acre. When sowing the peas the drill was set as deep as possible. After sowing the peas the oats were sown with the same drill, the drill being set to sow more shallow. The oats were sown shallow enough so that very few of the peas were disturbed when sowing the oats. In order to secure good germination it is desirable to sow the peas deep, unless the seeding can be made early in the spring.

May 16: A second sowing of peas and oats was made in the same manner as described under date of May 5.

May 21: The last seeding of peas and oats was made as were the former seedlings, and peas and barley were sown in the same manner as peas and oats described under date of May 5.

June 11: A plat was sown to cow-peas and milo maize. Two sowings were made. When sowing the milo maize the drill was set to sow four pecks of wheat per acre, and when sowing the cow-peas the drill was set to sow seven pecks per acre.

June 25: A plat was sown to black cow-peas at the rate of two bushels per acre.

TOTAL YIELDS.

Table I gives the date of sowing, the date of harvesting and yield per acre of both green substance and air-dry matter of the different soiling crops tested in 1904.

TABLE I—YIELDS OF SOILING CROPS.

Crop	Date of Sowing	Date of Harvesting	Yield per acre.	
			Green Substance Pounds.	Air-Dry Substance Pounds.
Flat peas.....	June 17-June 28	10,004	1861	
Peas and oats.....	May 5	27,671	3929	
Peas and oats.....	May 16	18,137	2938	
Peas and oats.....	May 21	22,773	3120	
Peas and barley.....	May 21	19,415	3436	
Flat peas.....	Aug. 3-Aug. 12	11,782	2344	
Clover silage.....				
Cow-peas and milo maize.....	June 11-29	18,083	3707	
Black cow-peas.....	June 25	18,251	3705	
Red ripper cow-peas.....	June 25	11,117	2590	

From this table it will be readily seen that peas and oats give the largest yield of green substance and also of air-dry matter. While it is true that the two cuttings of flat peas produced a considerably greater yield of air-dry matter than either of the other crops, yet it should be remembered that the cow-peas followed the peas and oats, and the combined yield of these two would represent the yield per acre during the season, as in the case in the two cuttings of the flat peas. This subject, however, is given fuller discussion in another paragraph.

Peas and oats gave the largest production of a single cutting, this being nearly two tons (2,029 lbs.) of air-dry

**100% ON YOUR MONEY
EVERY YEAR
FOR TWENTY YEARS**

This is the marvelously good investment that more than 700,000 users have actually found the **DE LAVAL CREAM SEPARATOR** to be.

With the average number of cows a **DE LAVAL** machine saves and earns its whole cost the first year, which it continues to do yearly for its established life of fully twenty years more to come.

There surely isn't another such investment, either on the farm or off it, open to any one having cream to separate. Why delay making it?

As for the first cost, if you have the ready cash of course there is a fair discount for it, but if not any reputable buyer may secure a **DE LAVAL** machine on such liberal terms that the machine is actually free of cost for it will earn its cost and more while you are paying for it.

Send at once for catalogue and full particulars.

TOPEKA BUSINESS COLLEGE, Topeka, Kans.

substance per acre. While the flat peas produced relatively a larger amount of air-dry substance from the total weight of green substance than the other crops, yet, for various reasons, this crop is not so desirable as a forage crop as some of the leguminous annuals. As the flat pea is a perennial, it required more or less cultivation each year to keep the land free from grass and weeds. It is also inclined to grow in broad rows or to occupy a large part of the land, and, consequently, cultivation is difficult. These, together with the difficulty of securing good germination, are sufficient objections to make this crop unpopular with many farmers. While the flat pea as a protein-producing crop has much to recommend it, yet the reasons just stated and the fact that it is not particularly relished by dairy cattle are sufficient to at least place this crop among the questionable forage crops for soiling purposes.

The following table (Table 2) gives the weight of green substance, the weight of air-dry substance and the weight of protein per acre produced by the various crops for the three years during which these tests were made. When tests for more than one year have been made, averages only are given:

TABLE 2—YIELDS OF SOILING CROPS.

Crop.	Number of Years	Weight per Acre—Pounds		
		Green Substance	Air-Dry Substance	Protein
Alfalfa.....	1	25,426	6555	1145.30
Clover.....	1	9,072	2676	
Clover and timothy.....	1	6,878	2319	260.89
Corn.....	1	22,360	5456	405.79
Cow-peas (Whippoorwill).....	2	17,554	3402	447.98
Cow-peas (black).....	1	18,251	3705	467.00
Cow-peas (red ripper).....	1	11,117	2590	474.00
Cow-peas and milo maize.....	1	18,083	3707	451.90
Flat peas.....	2	17,700	3701	574.50
Peas and oats (8 trials).....	3	18,623	2862	310.86
Peas and barley.....	1	19,415	3436	530.00
Rape.....	2	29,055	4071	509.55
Rye.....	1	11,930	3406	272.00
Soy-beans.....	2	11,723	2505	317.36
Sorghum.....	1	27,279	4337	360.51
Sorghum and cow-peas.....	2	31,018	5439	397.39

From the above table it will be seen that alfalfa produced the greatest yield of air-dry substance per acre and also the largest yield of protein. When we consider, however, that cow-peas grew on the same land that produced the peas and oats and peas and barley, we see that about the same yield of green substance was produced per acre by the two crops that was produced by the three cuttings of alfalfa, and that the two crops produced almost as much protein.

Who Stole the Butter?

A farmer owned a herd of milk cows that yielded him an average of 400 pounds (about 200 quarts) of milk per day. It was average milk, being 4 per cent butter-fat. In other words, the 400 pounds of milk his cows gave him daily contained 16 pounds of butter-fat. This farmer had had his milk tested, and knew it contained that amount of butter-fat. He churned every three days and knew the cream from three days' milk should yield 48 pounds of unsalted butter. But it didn't. Instead of getting 48 pounds, he rarely got more than 25 or 26.

Who was getting that cream?

His wife thought that somebody might be stealing it, so he put a lock on the milk-house door. That didn't help matters any.

He was puzzled.

He had a first-class milk-house, used the best system of deep settling, and couldn't see where that cream went. He let his milk stand until almost sour before he skimmed it, thinking it might cream better. But that didn't mend matters any—simply spoiled the skimmed milk for calf feed. Up to that time he had thought he had a perfect system of skimming. But he knew that 48 pounds of butter-fat was there, because he had had his milk tested; but he could not make as much butter as he should.

He grew suspicious of his cans.

It seemed to him that something was wrong with his cans. He asked his hardware dealer about it. This was the answer he got: "Look down your calves throats." He asked the hardware man what he meant. The hardware man replied, "You have been robbing yourself—heen feeding about half your butter-fat in your skimmed milk. Your cans are good enough, as cans go—but cans don't do the business. They depend altogether on the force of gravity to do the skimming, and gravity is not strong enough. Half of the butter-fat remains tangled up in the skimmed milk, and it takes a force a whole lot stronger than gravity to get it out."

"What will do it?" the farmer asked. "Centrifugal force, as applied in the Sharpless Tubular Cream Separator," was the reply.

This hardware dealer was an agent for the Sharpless Tubular Cream Separator, and loaned this farmer a Tubular for a free trial. The farmer took the Tubular home, used it three days, churned 47½ pounds of unsalted butter from the cream it extracted out of three days' milk and sent a check to the hardware dealer in payment for the machine. He had been robbing himself, and did not know it. He had been making six-cent veal out of butter-fat the Tubular would have enabled him to get 25 to 35 cents a pound for, when he could have made just as good veal out of oil-meal costing but two cents a pound. The kindness of the Tu-

bular agent in lending him a Tubular for a free trial enabled him to find the loss and stop it—making a gain for him of about 8 pounds of butter per day.

All Tubular agents are just as accommodating. Any one of them will lend you a Tubular for a free trial. If you do not know of any Tubular agent near you, we suggest that you write to The Sharpless Separator Co., of West Chester, Pa. If you will ask for catalog No. 165 they will not only send you the catalog, but refer you to their nearest local agent. The Tubular Cream Separator is a machine we can, and are glad to, heartily recommend.

Mexico-St. Louis Special.

The United States and Mexico, North America's sister republics, destined in the estimation of all to be closely allied in the stupendous accomplishments of the future, have now been brought within intimate touch by the installation of a semi-weekly fast train service, giving a sixty-hour schedule between St. Louis and the City of Mexico. Each Tuesday and Friday, at 9 a.m., a through vestibuled train leaves the St. Louis Union Station over the Iron Mountain Route, and at 8:30 p.m. two days later will land its passengers in the ancient capital of the Montezumas—the present metropolis and seat of government of modern Mexico. Unquestionably this new departure means much for both Nations concerned. It is a shortening of the links in the chain of fraternal amity, born of a better understanding of their mutual interests, and will bring about a still closer social and commercial relationship. Credit is due the several through lines

which have cooperated in this laudable enterprise—the Iron Mountain Route, the Texas & Pacific and the International & Great Northern (all Gould roads) on this side of the Rio Grande, and the National Lines of Mexico beyond Laredo—though beyond a shadow of doubt they will reap a rich harvest from the rush of tourists and commercial interests to profit by this opportunity of speedy and comfortable travel, a delightful change from the customary slow time, frequent changes at junction points, and the tedious layovers that formerly robbed travel of its pleasure. The train will comprise through compartment, observation and standard drawing-room sleeping cars and dining car, affording every comfort and luxury of modern railway service.

American Wire Fence.

There are many kinds of wire fence, but the requisites are first, that it shall be strong to hold up against and withstand all extreme strains, and then flexibility, to take all ordinary shocks, give and come back to its original shape, so as not to stay sagged or bent.

These two very important qualities are found in the superlative degree in fence made by the American Steel & Wire Co. Their fences are not only constructed from extra long fibre steel wire, strong and flexible, but this is galvanized heavily to protect it from the weather and prevent rusting out.

This concern operates thirty big plants and all make every known kind of wire, from the stiffest, required in piano manufacture, to the finest—all almost silky—fibre which is woven into wire cloth. With such extensive facilities, and opportunity to observe their products under all sorts of conditions, it is not surprising that they should be able to produce wire surpassing in quality all other kinds.

And the enormous quantity they make enables them to reduce the cost to a point where they can sell the very best wire at prices very much lower than other concerns have to ask.

Steel is the very best material for fences because it is the strongest substance made.

And American fence—wire made by the American Steel & Wire Co.—is so constructed that you can adjust it to any unevenness in your ground and maintain uniformity throughout. Its lateral wires are big, continuous pieces, very tough and durable; while the upright, or stay wires, are hinged upon the lateral wires so that there can be no giving way. This makes a perfect square mesh fence.

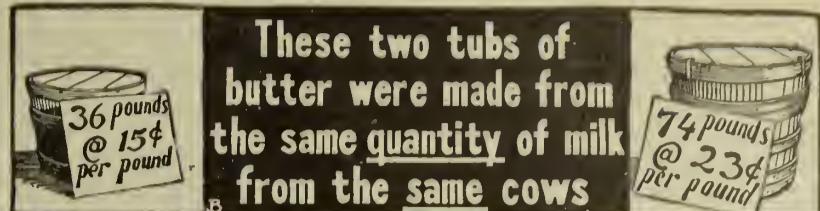

American fence wire is annealed as it is drawn, which makes it stronger than ordinary fence wire. American fence is sold through dealers to give buyers the benefit of personal attention; but if your dealer does not keep it, put off buying until you can write the makers and get a catalogue. That will enable them to see that your interests are properly looked after.

Address the American Steel & Wire Co. at any of their branch headquarters—Chicago, New York, Denver or San Francisco.

Farm Scales a Necessity.

There has been a good deal written lately about scales on the farm. The question is asked, are they a necessity? Is a farmer justified in owning a scale of his own rather than depending on the public scale in town? To my mind there is no more profitable investment a farmer could make than to buy a small platform scale for his own use, or join with other farmers in buying one for neighborhood use.

The day of guessting on farm deals is

How was it done? Here's the story in the words of a plain, honest, hard-working farmer and his wife.

RAVMOND, NEBR., JUNE 6, 1905.
We had a water separator, and from twelve cows we made 36 lbs. of butter. The next week we used a No. 6 U. S. Separator and made 74 lbs. from the same cows in the same pasture without any extra feed. We made \$10.45 the first week after using the machine. We are very much pleased with it, and could not do without it now.

JOHN NEYLON,
MRS. NEYLON.

Are you using any gravity method to skim your milk? If you are,

U. S. Cream Separator

will do for you what it did for the Neylons. Think what that means—a considerable daily saving in the time and work of handling your milk—from $\frac{1}{2}$ to $\frac{1}{4}$ more butter than you are now getting, and better butter, too, that brings a higher price. You can't afford to put off looking into this matter another day—write us now for a free catalogue, which explains just what you want to know.

VERMONT FARM MACHINE CO.
Bellows Falls, Vt.

Cleveland Cream Separator

Direct to You
30 Days Approval Test

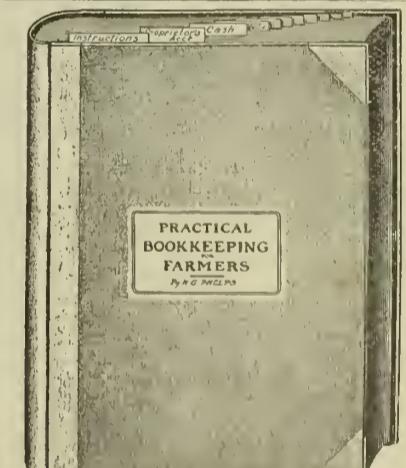

Easy Running:—Cleveland Separator this isn't an empty claim. The whole thing is summed up in an honest, easy to prove reason. The Cleveland is the only ball-bearing separator made.

Easy Cleaning:—The Cleveland has fewest parts and skimming device is made of aluminum. Investigate. You will find this metal is non-corrosive, non-poisonous, milk cannot stick to it and there is no coating to wear off. We prove these things.

Long Life:—The Cleveland has the fewest parts of any separator made and gets results at the slowest speed. Parts can't wear out that are not there. The Cleveland is a guaranteed perfect skimmer.

How We Sell:—To you from our own factory. The only manufacturers making a high grade separator and selling it at a fair, square price and a fair, square plan. No money in advance. No note to sign. No fuss of any kind. The catalog tells you. Write for it.

THE CLEVELAND CREAM SEPARATOR CO.
Dept. B, 34 Michigan Ave., N. W.
Cleveland, Ohio.

The farmer's guide to success in farming. 200 pages 10x13 inches. 20 pages of instructions and illustrations. A full set of farm accounts worked out. The remainder of the book for use in keeping accounts. The results of a whole year's business are shown on one page which will show the farmer the cause of success or failure. Will last the average farmer three years. Price \$3.00. For a short introductory period the price will be \$2.00 delivered. Descriptive circular and testimonials free.

Send us ten 2-cent stamps and we will mail you our latest book—a 50-page book on Business Writing and Lettering; or we will send you both books for \$2.15, regular price \$3.00.

Address H. G. Phelps & Co., Bozeman, Mont.

Use a Manure-Spreader.

A 48-page book entitled "Practical Experience with Barnyard Manure," is now available. It gives some excellent ideas. In fact, the book is full of good common sense. We can not take the space to tell all of the good things that the book contains, but here are some facts that are contained in it.

Series of experiments show that where manure was spread on corn ground as the farmer ordinarily spreads it, the value of the crop was \$20 per acre. Another experiment was made using the same amount of manure spread by the new, up-to-date method, and the value of the crop was \$24.80 per acre, a gain of \$4 per acre. Another experiment was made on a clover-field, and the gain was \$4.50 per acre. Another gain of \$8 per acre is reported on a clover- and timothy-field.

The book explains the new method fully. It tells why such a large gain is made. It explains the matter so explicitly that the reader will see the point at once. It contains articles from those who have made a study of this subject for eighteen years.

The book does not contain an advertisement of any kind. It is printed on good book paper and is a valuable publication. It should be in the hands of every reader of this paper. We consider the book of such value to our readers that we have made arrangements with the publishers to mail a copy to the readers of the KANSAS FARMER, providing they will write at once, and mention this paper in their letter. Send four cents to pay postage. Address the Smith Manufacturing Co., 158 East Harrison St., Chicago, Ill., and ask for a copy of the book entitled "Practical Experience with Barnyard Manures."

Gypsy and Brown Tail Moths.

The pest of Gypsy and Brown Tail Moths has caused much annoyance in New England and has made it necessary to adopt strenuous measures to combat it.

The spraying outfit shown in the cut is made especially to meet the demand for a sure means of killing the moth and is put out by the Olds Gasoline Engine Works of Lansing, Mich.

They started out with the theory that the practical and correct way to dispose of the Gypsy and Brown Tail Moth is by spraying, and they believe in a mist instead of a solid stream. From the experience which they had in Northern New York a few years ago,

watha Yellow Dent corn grown and developed by John D. Ziller, of Lawndale Seed Farm, Hiawatha, Brown County, Kansas. At least he has been growing and showing this variety for about 20 years past and has a long string of first prizes, won at important western fairs and shows, to show for the faith there is in him. This is the corn with which Mr. Ziller won the silver medal at the World's Fair at St. Louis, and the first prize and \$20 in gold for best bushel of corn at the same place. Mr. Ziller will be glad to send you his seed catalogue, which contains mention of many other varieties, if you will drop him a line and say you saw this in the KANSAS FARMER.

Wealth Producers.

To the man or woman studying over ways and means of earning money on small capital, poultry-raising offers greater attractions than almost any other field.

It takes the merest fraction of an hour each day if one has a reliable incubator, and the cost of the standard machine, "The Sure Hatch," made by the Sure Hatch Incubator Company, of Clay Center, Nebraska, is very reasonable.

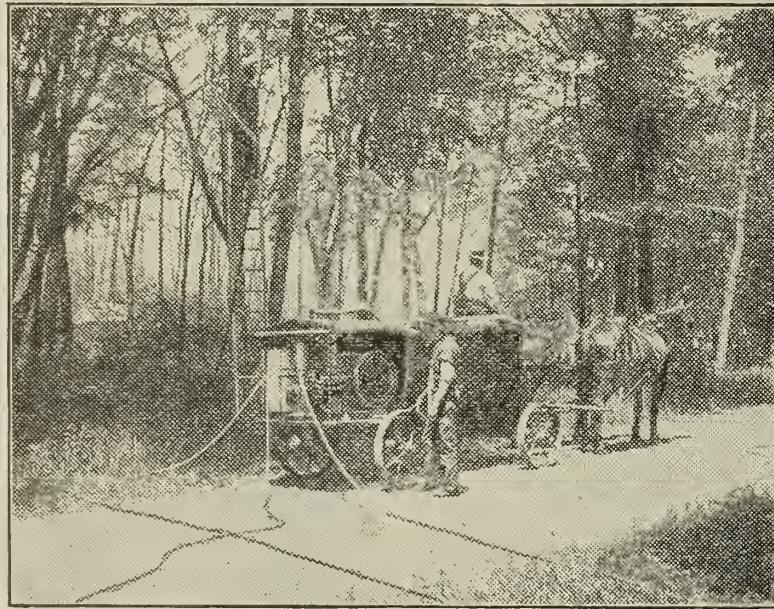

They sell their 100-egg machine (which by the way has an actual capacity of 120 eggs) for \$10.00, in most localities, and not only prepay the freight on it but they will ship it on sixty days trial. We have carried the advertising of the Sure Hatch Incubator Company for a number of years and hundreds of our readers have purchased their machines.

The 1906 Incubator has been greatly improved. It has a patent Safety Lamp that is entirely free from the drawbacks of ordinary incubator lamps. The burner is made with a special flame slot that does not spread the flame, while the one-piece large flue is a decided advantage over the ordinary kind that often opens at the seams and cause serious trouble.

Being surrounded by a water jacket, every bit of the lamp's heat is utilized, making the Sure Hatch Safety Lamp a great oil-saver.

Both the tank and pipes of the hot-water heating system are made of heavy copper and there are 138 square inches of heating surface.

Important improvements have been made in the ventilation system, which keeps the eggs constantly in warm, fresh air, the foul air escaping through vents at the bottom of the egg-chamber.

they have come to the conclusion that the finer the spray the more readily it adheres to the leaf, and also that the pump must carry at least 125 pounds pressure to obtain the best results from spraying. In this way this outfit uses a very small amount of liquid, but the air is full of it like a fog, and it adheres to both sides of the leaves and makes a thorough job of it.

Five main lines of hose can be connected with these sprayers and then tributaries from these, so that it is possible to use fifteen nozzles. In this way a large territory is covered and a very small amount of the poison used.

One of these outfits was sold to General Lawrence of Medford, Mass. He has been using it for several weeks and reports that it is the best thing he has ever seen for the purpose. A few days ago he bought a second outfit and he says he prefers it to all others. He has put out more money probably, trying to suppress the ravages of the Gypsy and Brown Tail Moth than any other man in the State.

Superintendent A. H. Kirkland of Boston was sufficiently interested in this spraying outfit to go to Madford to see it in operation and states he is greatly pleased with the way it works. He saw it in operation with six lines of hose and sixteen nozzles and it did thorough and practical work.

The outfit is a compact affair and weighs comparatively little. With the pump operating at normal speed there is sufficient liquid in the tank to supply twelve nozzles for one hour or one nozzle for twelve hours.

It is adapted for use in orchards as well as in parks and has prospects of being very widely used by fruit men throughout the United States.

A Good Kansas Corn.

For many years it has been the opinion of thinking men that what Kansas needed more than any other seed was a good, well acclimated corn. Not good old corn merely; that is easily obtained, but a distinctively Kansas corn that would be in every way suited to our conditions and that would, at the same time, be a good yielder. This very desirable state of things seems now in a fair way to be realized in the Hia-

Our readers will be interested in the new Sure Hatch Catalogue and Poultry Manual which can be obtained by addressing a postal card to the Sure Hatch Incubator Co., Clay Center, Neb., or East Washington St., Indianapolis, Ind. Those wishing to engage in poultry raising for profit will find it a safe guide.

A Free Book on Soil Cultivation.

There are few subjects upon which the farmers of America have been given as little information as on the proper cultivation of the soil.

For this reason, we are particularly glad to call the attention of our readers to a book that has been issued by the Fuller & Johnson Mfg. Co., the well-known farm-implement makers, located at Madison, Wisconsin.

This company has been making plows, harrows, cultivators and a general line of implements for over a quarter of a century and now, they have set forth in a clear, practical, understandable way, the valuable information they have accumulated in all these years. For instance, let us put a few questions to our readers, which this book answers intelligently:

What is the best time to turn under a grass manure crop? What are the advantages of early spring plowing? Under what circumstances should fall plowing be done? What is the best method of treating a field which is overrun with weeds and insects? When should a light, sandy soil be plowed? When should a heavy, soggy soil be plowed? How should sod-land be plowed? What style of plows are best for the different soils? When should sub-soiling be practiced? Why is deep harrowing necessary after plowing? When should a disk harrow be used? Under what conditions may liming be practiced with profit? What degree of temperature should the soil be to insure good germination? What is the best depth at which to plant corn? Why should the crop be cultivated after a rain? How many tons of water will a 60 bushel crop of corn need? How many tons of water will a 25 bushel crop of wheat need? As a rule, which is best, deep or shallow cultivation? Why must the soil be in better tilth when transplanting than when planting seeds? What are the most essential

elements of tobacco land? How many feet of nursery must one plan for each acre to be set to tobacco? How much cabbage seed is needed to grow enough plants for an acre? What is the best method of planting sweet potatoes?

It is given away absolutely free. We advise everyone to write for a copy promptly, as the books are in great demand already. The Fuller & Johnson factory is at Madison, Wis.

Growth of a Great Horse Remedy.

No better illustration can be given of great things coming from small beginnings than Kendall's Spavin Cure. It was compounded and used in a small way about 35 years ago by a veterinarian named B. J. Kendall in the then obscure village of Enosburg Falls, Vt. Since then the name of Dr. Kendall and "Kendall's Spavin Cure" have gone to all parts of the world. The merits, and the merits alone, of the remedy have done it.

While Dr. Kendall was practicing as a veterinarian he wrote a little book entitled "A Treatise on the Horse and His Diseases." It is safe to say that no more popular work on this subject has ever been produced down to the present day. It was used originally by the doctor in his practice and handed out to the horsemen with whom he came in personal contact. It is said that now upwards of 12,000,000 of these little books have been published and gratuitously distributed.

The cures of spavin, curb, ringbone, splint, wire-cuts, sores, etc., and the expense and labor saved to horse-owners by Kendall's Spavin Cure are beyond comprehension. For the greater part of these 35 years Kendall's Spavin Cure has been the chief, and with thousands of horsemen the only, remedy used. It must be remembered that it is not confined to this country. It is decidedly a world remedy. With the little book mentioned above to guide, and with Kendall's Spavin Cure at hand to treat promptly any case of sprain, wound, lameness, incipient bone growth, etc., the ordinary horse-owner is well fortified against all the common ailments to which horse flesh is liable. We believe it to be unquestionably a more efficient remedy and adapted to the cure of more of the ailments to which the horse is liable than any other now on the market.

Bargains in Seeds.

The immense harvest of 1905 has enabled the John A. Salzer Seed Company of La Crosse, Wis., to offer unheard-of bargains in seeds. After supplying the usual channels of trade, they have enough seeds of all kinds remaining to supply thousands of farmers with their entire season's supply at a remarkable saving.

The "Salzer Bargain Seed Book" contains a complete list of these seeds and is sent free of cost to any one on request. The list includes not only all varieties of vegetable and flower seeds, but barley, clover, flax, spelt, timothy, new wheats and grasses of all kinds. They are all of the famous "Northern Grown Pedigree Seeds" that made Salzer famous throughout the world, and have a record for immense yields. Those desirous of obtaining the best in seeds, and the greatest number of seeds for the least expenditure, should not delay writing for the "Bargain Book"—a fine to the John A. Salzer Seed Co., Lock Box 56, La Crosse, Wis., will bring it by return mail.

Selecting the Seed Potatoes.

It is not too early to begin to think about seed potatoes. Even though you do not order now, it is a good plan to have cast around and made up your mind where your seed is to come from. To those of our readers who are not already regular patrons of the house, we suggest the Griswold Seed Co., of Lincoln, Neb. It is unquestionably one of the best concerns in the country from which to buy seed potatoes. A large part of their stock is grown for them in the Red River Valley, North Dakota, a region famed for its potatoes and which gives the hardiness which insures a wonderful development in less rigorous climates. While doing a general seed business, they might be called seed potato specialists. Kherson oats, alfalfa, seed corn, rye grass, millet, sorghum, and garden seeds are a few other things specially in their line. They publish a large, well illustrated catalogue, which they send free to any one writing for it. We think it a good seed catalogue to have.

The McMillan Fur & Wool Co., of Minneapolis, have mailed us their new circular, which we have on file for reference. This house has been established some twenty-eight years and on account of their extensive business, which minimizes the proportion of fixed expenses, are in a position to pay high prices. They make a specialty of receiving goods through shipments, and shippers find returns very satisfactory. Mention the KANSAS FARMER and write them for free catalogue and price list.

The seed house of L. L. May & Co., St. Paul, Minn., are sending out a very fine catalogue for 1906. It is very complete and nicely illustrated. Those of our readers who desire to secure Northern-grown seeds of all kinds would do well to address this firm. They also list garden tools, sprayers, dusters, incubators and brooders in addition to fruit-trees, shrubs, and all kinds of garden, field- and flower-seeds.

THE MARKETS.

Kansas City Live Stock Market.

Stock Yards, Kansas City, Mo.

Monday, February 19, 1906.

Cattle prices reached the high note of the winter the middle of last week, but prices eased off after that on account of a heavy run Thursday and closed the week with practically no change from close of previous week. Buyers were erratic most of last week, their orders showing that packers feared a drop in receipts, but after they had gotten stocked up pretty well on Wednesday they settled down to their usual indifference, when they do not need cattle very bad. Their early activity, however, showed that the

THE MOST IMPORTANT PUBLIC SALE OF REGISTERED HEREFORD CATTLE

THAT WILL BE HELD THIS YEAR TAKES PLACE AT THE
LIVE STOCK SALE PAVILION

Kansas City, Mo., Wednesday, Feb. 28 and Thursday, March 1, 1906

BEGINNING EACH DAY AT 1:00 O'CLOCK SHARP.

THE SALE IS BEING MADE BY THE FOLLOWING WELL-KNOWN HEREFORD BREEDERS:

C. A. STANNARD, Emporia, Kans.
C. B. STOW, Hamburg, Iowa.
MISS LOU GOODWIN, Blue Rapids, Kans.
JAS. A. GLESON, Odessa, Mo.
T. C. SAWYER, Lexington, Mo.
D. D. AKIN, Sterling, Kans.
J. A. YARSON, Everest, Kans.
GEO. E. BAKER, Maryville, Mo.

GUDGELL & SIMPSON, Independence, Mo.
J. W. LENOX, Independence, Mo.
CLARENCE DEAN, New Market, Mo.
R. C. WILSON, Belton, Mo.
STEELE BROS., Richland, Kans.
W. J. BONEY & SON, Cairo, Mo.
MRS. K. W. CROSS, Emporia, Kans.
JAS. WREN, Keytesville, Mo.

100 HEAD will be sold, about equally divided between bulls and cows. This will be the ranchman's opportunity as well as the breeder's and farmer's. Every animal is thoroughly guaranteed.

If you would like to have a catalogue giving the breeding of each animal to be sold, write _____.

SECRETARY C. R. THOMAS, 225 West 12th Street, Kansas City, Mo.

under whose management the sale will be conducted.

meat trade is in good shape, and that they are able to dispose of large quantities of product.

The cattle supply to-day is 12,000 head, prices steady to 10c lower. Steer prices are about steady with last Monday, but considerable below the high time of the week Wednesday. Cows and heifers are 15@25 higher than last Monday, stockers and feeders about steady, veals higher. The best steers sold last week at the high point at \$5.60@5.85 odd head at \$6, bulk of steers \$4.75@5.40, prices 10@20c below these figures to-day, with a top of \$5.50. Top heifers bring around \$5, cows \$4.40, bulk of she stuff \$3.25@4.25, medium and common cows \$2.25@3, bulls \$2.75@4, veals \$6@7.50, feeders \$4@4.85, extra choice ones \$4.90@5.20, stockers \$3.35@4.50. Country buyers are taking hold in a hesitating way, influenced by the uncertain movements of the fat-steer market, but show an inclination to buy.

Hogs gained a quarter last week, closing at about the best point, but the market had a few downs along with the ups. Supply is moderate to-day, 8,000 head, prices strong to 5c higher, top \$6.25 for two loads, bulk of sales \$6.05@6.15. Present prices are around \$1.30 higher than a year ago, and at that time the market was declining. Receipts are moderate, 52,000 last week, slightly more than at this time last February.

Mutton prices held firm last week, lambs declined 10@20c. Run to-day is 10,000 head, prices strong on sheep, lambs weak. There are signs of smaller receipts, and some traders believe lambs will sell better shortly. Top lambs barely bring \$7 now, good ones selling at \$6.55@6.80, yearlings \$5.70@6.10, wethers \$5.50@5.80, ewes \$4.25@5.25. Some thin lambs have gone to the country lately at \$5.85@6.25. J. A. RICKART.

South St. Joseph Live Stock Market.

February 19, 1906.

There was a slight increase in the number of cattle in sight at the five points to-day as compared with last Monday and there was an easier feeling to the trade in consequence. The local market was well supplied with good styles of export and dressed beef steers and the market did not show any particular change, demand being strong for all classes and prices about steady with the close of last week. Cows and heifers were only in nominal supply considering the number of cattle on sale and the market was steady to strong. Bulls and veals were unchanged and good stock and feeding steers were in active demand and steady. Following are current quotations: Native steers \$4@6.10; Texas and Westerns, \$3.75@5.50; cows and heifers \$1.65@4.80; bulls and stags, \$2 @4.75; veals, \$3.50@7.50; yearlings and calves, \$2.75@3.90; stockers and feeders, \$3@4.60.

There was further shrinkage in the number of hogs in sight at principal markets and values responded by advancing sharply, but some of the gain was lost before the close. The general trade, however, ruled 5@10c higher than average trade of Saturday, prices ranging from \$5.90@6.20, with the bulk selling at \$6.07@6.15. These figures have only been exceeded once since May, 1903, and general conditions continue to be favorable to the country. Good hogs are scarce and offerings are pretty much on the mixed order that tall down to an unfinished light end, which indicates shortage of supplies in the country. However, conservative dealers are not following advances too closely and thereby enlarge their profits on all advances. Demand here is very strong at the higher range and packers could use many more than are coming.

The trade in sheep and lambs to-day held about steady, receipts being rather small and quality fair to good. Lambs are quotable at \$6.60@7.15, yearlings, \$5.75@6.50; wethers, \$5.50@6.10, and ewes at \$4.75@5.25.

WARRICK.

The Right Road

from Kansas City to Chicago, St. Paul, Minneapolis, Dubuque and Des Moines is the Chicago Great Western Railway. Three well equipped trains daily. Best of service. For further information apply to Geo. W. Lincoln, T. P. A., 7 W. 18th St., Kansas City, Mo.

Public Sale Cattle and Horses

On February 26, 1906, 14 miles southeast of Great Bend and 9 miles north of Hudson, Kansas, Stafford Co., 25 head of work horses, and everything required to run a 1600-acre wheat and corn farm; also 45 head of registered Hereford cattle, consisting of cows, heiferers and calves. Also 1 three-year-old bull. Cattle a little thin in flesh and no doubt will go at a bargain.

Pearl I. Gill, Great Bend, Kansas

PUBLIC SALE Jacks, Jennets and Mules

Second Annual to be held in

Savannah, Missouri, March, 8, 1906

22 large Black Jacks with white points, the kind that has built my annual breeding trade to over 600 mares and jennets at one barn and that has made Missouri famous as a mule State. As a class they possess the essential points for good breeders, size, heavy bone, good width, length, heads, ears, style, substance, and of the best breeding known. Four large Black Jennets in foal of same character. 22 extra good coming 3-year-old mules, the good boned, wide out kind. Some of them will mature in mules to weigh 1400 to 1500 pounds; and 4 good young harness horses. Write for illustrated catalog.

The Preparation of Smoked Meat.

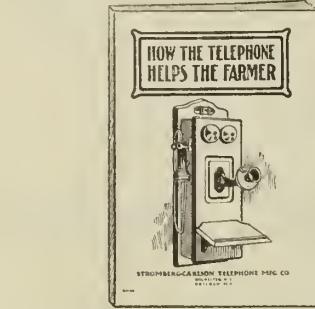

Smoked meat is either a table delicacy or a coarse article of food according to the method of its preparation.

A hickory wood fire used to be considered the only method of curing hams, shoulders and bacon. But since the introduction of Wright's Condensed Smoke made from the best hickory wood, the process of curing all kinds of smoked meat has been simplified and the work made much safer and easier.

Wright's Condensed Smoke is considered by all who have used it one of the grandest inventions of the times, and many can not praise it enough.

Wright's is the original condensed smoke and is put up in sealed bottles with metal cap—never in bulk. The manufacturers, the E. H. Wright Co., Ltd., Kansas City, Mo., send out a readable little book, "The New Way," which treats further on this subject and will prove very interesting as well as instructive to all who put by smoked meats for winter use. A postal card addressed to them will secure it.

The Stromberg-Carlson Telephone Manufacturing Co., of Rochester, N. Y., and Chicago, Ill., who make a specialty of farm telephones, have just issued a series of handsome pamphlets that

are of great value to the farmer for whom they are especially prepared. These pamphlets are handsomely illustrated and show complete plans for building and operating private lines. "How the Telephone Helps the Farmer," "How Successful Telephone Systems Have Been Organized," "Telephone Construction Material and Supplies," and "How to Build a Rural Telephone Line" are the names of these little books, the latter of which costs 10 cents per copy. Write the nearest office of this company for any one or all of these books and then build your line.

Profitable Stock Feeding.

Letters concerning the new book on "Profitable Stock Feeding" are being received daily from prominent men from various parts of the country.

Director B. C. Buffum of the Wyoming Experiment Station writes, "I have read this book with some interest and consider it a valuable addition to literature, which will be useful to farmers and stockmen. The chapters seem to be brief, to the point, clear and complete statements of the latest science of practical feeding. I will order copy for our Station library and recommend its use by students."

Secretary F. B. Coburn of the Kansas Board of Agriculture says: "I have looked through your book on 'Profitable Stock Feeding' and am much pleased with its nature and make-up. I shall hope to see it in the hands of stockmen everywhere and if they will make proper use of the vast fund of fact and experience it contains, the work will be greatly to their benefit."

Prof. James E. Rice of Cornell University, among other things says, "It strikes me as being intensely practical and should prove of great value."

Professor P. S. Shaw of the Michigan Agricultural College writes, "Your text book covers the ground concerning stock-feeding principles very fully and in an extremely practical manner, so that it should be of great value for the purpose for which it is intended." Note the advertisement.

COLIC CURE.

Testimonial Received by Dr. Earl S. Sloan, Boston, Mass.

Mr. G. H. H. Rowe, Sparta, Ill., writes: "While serving an officer on the Steamship Montezuma, which carried horses and mules to South Africa, I saw your Colic Cure used on the horses and never saw a case of colic prove too much for it. We had 1250 horses on board for over a month, so that we had a good opportunity to test the remedy thoroughly. The veterinary used your liniment also for sore shoulders and sprains, and the horses were landed in a particularly fine condition.

"I do not go to sea now, as I am farming, but have taken great pains to recommend your medicines, and always keep a stock on hand. I know of another case in Sparta, Ill. where your Colic Cure saved a \$170 mare after the veterinary failed to cure her."

Twentieth century ideas applied to an eighteenth century farm—that is the gist of the article, "A New Boy on an Old Farm," which is printed in The Youth's Companion for February 15. It is a contribution by Prof. L. H. Bailey, of the College of Agriculture, Cornell University. Full of interest for those who may know nothing of farming, the article is of value and importance to those who have made a life-work of agriculture. To the farmer's son, weary of the limitations of his life, the article offers suggestions which may give him a fresh and more hopeful view of his situation.

KANSAS FARMER.

Established in 1863.

Published every Thursday by the
KANSAS FARMER CO.,
Topeka, Kansas

SUBSCRIPTION PRICE: \$1.00 A YEAR

Entered at the Topeka, Kansas, postoffice as second-class matter.

ADVERTISING RATES.

Display advertising, 20 cents per line, agate (fourteen lines to the inch). Continuous orders, run for the paper, \$1.82 per inch per week.

Special reading notices, 30 cents per line.

Special rates for breeders of pure-bred stock.

Special Want Column advertisements, 10 cents per line of seven words per week. Cash with the order.

WANTED—Lady Agents \$3 to \$6 per day, introducing into every household our brand new style hat pins. Exclusive territory, success certain. Send 25 cents for sample. W. M. Judy Co., 211 W. 9th St., Cincinnati, O.

Stray List

Week Ending February 8.

Harvey County—B. O. Hagen, Clerk.

Farm Thrashing Outfits.

Two years ago the State agent of a Wisconsin company that makes a specialty of farm thrashing machines visited me in the interests of his firm. He came at the right time to make a sale. My grain-stacks were putting on a garnishment of green. The thrashers never came. Their heavy outfits burrowed in the mire of barnyards and swales, slid off the slippery highways into soft ditches, and went through bridges weakened by floods. They were busier with treble than bundles. I was readily convinced of the advantage of having a thrasher all my own. I showed the agent my six-horse gasoline engine and asked him if that would do for the power. He said it would. I agreed to buy a Belle City machine with a 24-inch cylinder on the condition that it would do business. It came in a few days and filled the warranty. The way it disposed of damp, clinging straw surprised even those who were just going by and came in to be facetious. I thrashed my grain that fall with the ordinary farm help and one or two extra men. The ground was soft, but a good pair of horses put the machine just where it was wanted, likewise the portable gasoline engine. We could set them both and get to work while the heavy rigs would have been preparing to move. When we finished thrashing that year I told the boys that the future held no place for a grain stack on Old Oaks farm.

The next year and this fall we thrashed from the shock. There is much of economy in this and the method is one for which the little separator is especially adapted. Five men and two teams are required to make much of a show for a day's work in stacking grain. One more man and a third team are a fair thrashing crew for my outfit, although it is handier to have one team for the grain wagons. I use two double-box wagons. The grain is delivered to the wagon by a swinging spout on either side of the machine and requires very little attention until the box is nearly filled. All the men who have hauled my grain say it is easier to shovel it into the bins than to handle filled bags. The one who hauls to granary can attend to oiling the separator. The gasoline engine takes care of itself. There are then left three men to use three basket racks in hauling from the field, a man to feed and a man for the straw stack. It is handy to have a twelve- or fifteen-year-old boy to cut bands, but the feeder can get along pretty comfortably without him.

So it is by this manner of thrashing, and with about the same crew that would be required for stacking, the grain is put under a roof—secure from the elements; the double action of stacking and thrashing eliminated and no further worry about a persistent canopy of clouds—and mist and rain.

I am sometimes asked how many bushels I can thrash in a day. I have not kept a particular record in this respect. I have been content to jog along satisfied with the thrashing faster than I could stack. In thrashing beardless barley last fall, short of straw and perfectly dry, it came from the grain-spout a bagful a minute, which would be at the rate of at least a thousand bushels in an ordinary day's run. My six-horse engine does not drive the separator to its full capacity. Careful feeding is required, the power being pressed to its maximum.

I am satisfied with my investment. When the last bundle passed the cylinder last month I figured that after three season's use the machine did not owe me enough to worry about, and it is good for years and years yet. If I were to advise any one on the purchase of a new rig I would suggest a self-feeder, with, of course, more power than I have; an eight-horse engine would do—ten would be better. I would then say, "Have a good canvas cover for your separator, alots for your engine; the battery-box, especially, must be kept dry. Thrash 'any old time' that your grain is fit to stack. If it rains, throw on your canvases and 'get busy' at something else. When you see your best neighboring farmers building stacks go to thrashing again. And if you have three men of your own the ladies of the household, as they set the table for one extra at 'thrashing time,' instead of sixteen, will say, 'You're an old darling!'"—H. A. Bush, Fond du Lac Co., Wis., in Breeder's Gazette.

City Ways in the Country.

Rural delivery, interurban trolley systems, and the telephone are bringing to the farmer much that has hitherto been enjoyed exclusively by city folks, with none of the noise, hurry, and worry of crowded streets badly ventilated homes and unsanitary conditions which are so frequently found in the city.

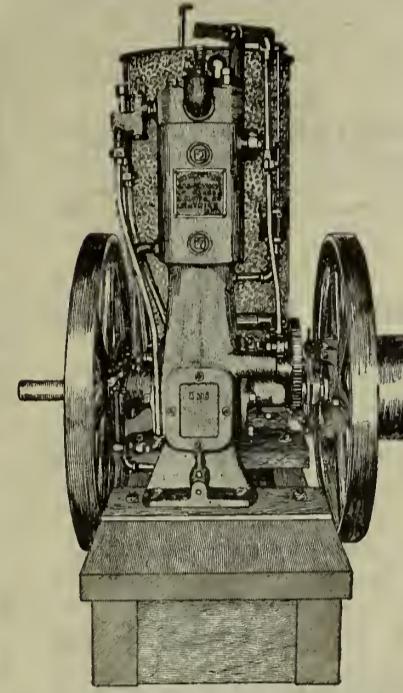

The farmer now has mail deliveries, communicates at will with neighbors and transacts his business by phone, keeping in close touch with the markets, to his great advantage, and all without the necessity of breaking into his work at a busy time. If need be, the trolley takes him to town in a jiffy. One result of this close touch with the world is that the country home is taking on more and more of the city's ways and comforts. In the matter of carpets, however, the sensible country housewife will stick to the good ingrain carpet, which covers the whole floor, in place of the city fashion of rugs and highly polished floors, which are not nearly so warm and require much more work to care for.

In this connection we call our readers' attention to the Lowell Inginal Carpet advertisement in this issue, telling of stylish ingrain carpets which have been famous for fully seventy-five years.

We call attention to the advertisement of the Rock Island Implement Co., of Kansas City, Mo. This shows the Rock Island riding lister which has won popularity among farmers for the following reasons: It has no tongue, and can therefore be driven much closer to fences than any other riding lister. The bottom hangs almost directly between the wheels and it can therefore be turned around without lifting the bottom out of the ground. It is frameless, and therefore much lighter than others, but on account of its pecu-

liar construction it is positively the strongest lister made. The driver sits immediately back of the seed box, and sees every kernel of corn as it drops, and again as it is being deposited in the ground. This is a fine farm tool and you will be pleased with it. Write for description and price.

For some time the Dempster Mill Mfg. Company have been manufacturing a two-horsepower four-cycle vertical engine, which has been so successful and is giving such splendid satisfaction, that they are putting in new machinery to assist them in meeting the demand for this engine. They are

now considerably behind in filling orders for their engines, and from indications will be obliged to work at their full capacity for some time to meet the demand for them.

The farmers and ranchmen of the West have been wanting an engine for pumping and other light work that would be so simple that a mechanic or gasoline engine expert would not be required to run it. The number of this class of engines they have bought of the Dempster Mill Mfg. Company would indicate that they have found it.

For the construction of their gasoline engines, the Dempster Mill Mfg. Company employ a corps of skilled mechanics who have been specially trained in gasoline engine work. Every part is made by an expert on that particular piece, and after the parts are assembled into the whole engine, it is tested while running, by men who see that each part is perfect and all working parts are accurately adjusted.

Nothing but the best obtainable material is used in the construction of all their engines and every effort is made to see that each engine is as nearly mechanically perfect as first-class machinery and skilled mechanics can make it.

The Dempster Mill Mfg. Company is one of the very few firms making both the four-cycle and two-cycle type of gasoline engines and making a success of both.

At present, they are making two-, four-, and six-horsepower vertical gasoline engine of the four-cycle type. They will continue to build the horizontal two-cycle engine in all the sizes they have been making and expect them to find as ready sale as formerly. Their two-cycle engines are noted for simplicity, durability and steady, even power.

The gasoline engine is fast becoming a necessity on the farm. The Dempster Mill Mfg. Company were not slow to recognize this and are putting forth their utmost endeavor to supply their customers with a first-class, high-grade engine. Mention the Kansas Farmer and write them at Beatrice, Neb., or Kansas City, Mo., for details.

An Immense New Factory.

Another huge factory has recently been completed by the Ohio Carriage Manufacturing Company of Cincinnati, Ohio. It is a most wonderful collection of buildings and equipment but, by all odds the most wonderful thing about it is that the whole plant is devoted exclusively to the manufacture of one single kind of vehicle—the Split Hickory Special Buggy, which these people sell complete, for only fifty dollars.

This immense new factory is the only one in the world given entirely to the making of one style of buggy. Not another bit of work of any kind is handled in it. Not a part of any other vehicle of any sort or description is made here. All the men in this factory do is make Split Hickory Special Buggies.

The enormous demand for these buggies which has made necessary the building of this big factory, has been created through a new plan the Ohio Carriage Manufacturing Company have of selling direct to you. They let you use one of their \$50 Split Hickory Specialists, with which they give a two year, legally binding guarantee, a month FREE to prove it is all they claim.

If you don't find it so, you can send it back.

The entire policy of this concern is to sell direct and save all the expense of go-betweens and unnecessary handling for you.

In their other big factories, the Ohio Carriage Manufacturing Company make Spring Wagons, Surrays, Carriages, Stanhops, Phaetons, Carts, Driving Wagons and a full line of Harness. All are sold direct to you and all are fully described and priced in the new 180 page Vehicle Book these people have just gotten out. They send a copy FREE to every one thinking of buying. A simple request brings it by return mail. Address The Ohio Carriage Manufacturing Company, H. C. Phelps, President, Station 251, Cincinnati, Ohio.

\$25 Kansas City to Portland, Tacoma, Seattle, Victoria, Vancouver and hundreds of Northwest points.

\$5 75 Cost of double berth from Kansas City in Tourist Sleeping Car leaving Union Depot 9.50 a. m., 6.05 p. m. daily.

This economical combination will be available any day from

February 15th to April 7th

Send me a postal to-day for particulars.

IN GEORGIA & ALABAMA, as well as the most prosperous dairyman, the most thriving breeder of horses, mules, sheep, cattle and hogs, the most expert fruit grower or trucker, is usually the Northern or Western farmer, who has located in those States in recent years and applied proper methods of culture. Thousands of others are coming this year and next.

WHY NOT YOU OR YOUR BOYS. No blizzards. No droughts. Average temperature forty-live in winter and eighty-five in summer. Rain full fifty-inches, evenly distributed. Tax rates low. No hard winters to feed against. Open sheds. Ten months pasture. These are but few of the many advantages.

NOW IS YOUR OPPORTUNITY to duplicate the success of these men down South, through the extension of our main line from Atlanta, Georgia, to Birmingham, Alabama, in and between which cities two million people consume farm products. The highlands are intersected with wide grassy valleys, and inter-penetrated with streams of purest water. The alluvial soil of the valleys produce the heaviest possible yields of clover, all grasses, corn, alfalfa, etc., and furnish luxuriant pasture. The highlands are ideal for peaches, apples and other fruits, and the mountain lands afford good range for sheep and goats. Lands can be purchased at from \$2.50 to \$35.00 per acre, near town, and good schools. Terms easy.

For handsomely illustrated literature and full lists of properties available throughout the South, address, mentioning this paper, J. W. White, G.I.A., Portsmouth, Virginia, or H. B. Bligham, A.G.I.A., Atlanta, Georgia.

Cheap Rate to
California.

Californians raise gold—they don't mine much now. An easier way has
been found than that! It is now obtained by farming. The alchemy of
nature converts the oranges, lemons, olives, grapes, wheat, alfalfa and other
products of the soil into good clothes, comfortable residences, and assuring
bank accounts. 'Tis being done every day in California. Wouldn't it
pay you to inquire into this? Better yet, why not go there?

Only \$25.00

From Topeka to almost all points in California and to many places in
Arizona. Liberal stop-over privileges.

On sale daily, February 15 to April 7, 1906. Tourist sleepers daily on
fast trains. Harvey meals.

For particulars, apply to

NEBRASKA, UNIVERSITY.

How to feed for beef, milk, mutton, Poultry and Pork with chapter
on the horse. More than 400 pages. Beautifully illustrated with por-
traits of typical animals of each class. Price \$1.50. Given with one year's
subscription to the Kansas Farmer for only \$2.00. Address,

KANSAS FARMER CO., Topeka, Kansas

DO IT NOW.

FRANK IAMS

and his "Big 4" three year old Percheron stallions, weight 8340 pounds. Winners of 1st, 2d, 3d and 4th prizes at Iowa and Nebraska 1905 State fair (over all). They are "sensational show stallions"—"Iams' sort." Iams sells models like these "Peaches and Cream" stallions at \$1000 and \$1500. It's up to you, Farmer John! Will you be "humbugged" by "bucco salesmen"? Iams owns and sells more 1st-class stallions than any man in the United States. He has his "selling clothes" on, no man with cash or bankable note gets away from Iams. "Back up," Bill, see Iams' daily "Horse show" and his "town of horse barns" filled to the roof with wide-as-a-wagon "black boys."

151—STALLIONS—151

2 to 6 years old, weight 1700 to 2600 pounds, 90 per cent blacks, 50 per cent "tom stallions." All registered, approved and stamped by European Government. Dad, it's "100 to 1" that Iams is pushing his competitors off the roof and hypnotizing his buyers with "top notchers" at 50 cents on the dollar, "let live prices." Iams' "horse show" at Iowa and Nebraska State fair was the, "talk of the town." The "best ever." All winners and sons of winners. His 2, 3 and 4 year old Percherons, Belgians and coach stallions won every 1st, 2d, sweepstakes and grand sweepstakes prize at Nebraska State fair. At Iowa State fair they were winners of 90 per cent of same prizes in above classes, and the Iowa and judge, Iams pays horses' freight and advertiser, but "he has the goods" better than he advertises. Teddy, it's "16 to 1" that Iams' "Peaches and Cream" stallions are "hot stuff" (for competitors). "It's a cinch" that Iams saves his customers thousands of dollars in commissions and middlemen's profits. Iams places \$1000 insurance for \$60.

\$1,000—SAVED AT IAMS—\$1,000

Ikey! What a rich graft these "slick stallion salesmen" are working on the honest farmer selling 4th rate stallions at \$2000 to \$5000. Iams sells "top notchers," so good, big and cheap that they do not need to be peddled to be sold. Mr. Buyer, see Iams' stallions yourself. Take no "gold brick stallion salesmen's" word. Iams has "the goods" you read about. His establishment is worth going 2000 miles to see. Iams makes his competitors "holler." He is knocking "high prices" out of the X'mas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. Georgie, dear! Buy a stallion of Iams. His \$1200 stallions are much better than our neighbors paid those Ohio men \$4000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from breeders, pays no buyers, salesmen or interpreters, has no two to ten men to divide profits with. Iams guarantees to sell a better stallion at \$1000 to \$1500 than are sold to Stock Companies for \$2500 to \$5000 by "slick salesmen, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalogue on earth. References: St. Paul State Bank, Citizen's National Bank, St. Paul, Nebraska.

The Lincoln Importing Horse Com'y

Lincoln, Nebraska

Now we are here with our catalog. It is ready for distribution. Parties contemplating buying stallions write for catalog. Remember, every stallion represented in the catalog is of our own importation and all of them this year's importation, except the group of three. We also have a large number of stallions not exhibited in our catalog. Note what we say in regard to this group. The three weigh 5,890 pounds; the largest stallions in the West in the same flesh. Some of our 2-year-olds of our last importation will tip the scales at 1,850 to 1,900 in only moderate flesh. Come and examine them at our expense if you find that we have misrepresented to you. Remember, our scales are in front of our office. You do your own weighing.

KANSAS FARMER COMPANY

TOPEKA, KANS.

QUALITY, SIZE AND THE BEST OF BLOOD WILL BE FOUND IN OUR DUROC - JERSEY BROOD SOW SALE

Tuesday, March 6, at farm, four and one-half miles southeast of Republic, Kansas

Thirty tops of our herd will be sold, consisting of tried brood sows, fall yearlings and spring gilts—all sows safe in pig to the following herd boars: Shakespere 3d 17919; Model H. 37967 by Higgin's Model; Honest John 37383 by Young John; Long Orion 37385 by Orion; King John by Honest John. Will also sell four Aberdeen-Angus bull calves. One registered calf, Eratum No. 74064, sire Eras of Linwood No. 46173, dam Gladys C. 31894. All stock in best of health. Catalogues ready.

Ward Bros., Proprietors,

Republic, Kansas

COL. JOHN BRENNAN, Auctioneer.

STRAWN'S SHORTHORN SALE

AT VALLEY FALLS, KANSAS, MARCH 1, 1906

25 Head--6 Bulls, 19 Cows and Heifers

My sale to be held March 1 at my stock farm five miles north and two miles west of Valley Falls, and one mile north of Half Mound, offers a splendid opportunity to those who wish to add to or establish a herd. We have been breeding Shorthorns for many years, and our offering includes many breeding cows, with which until now, we have refused to part. Some of my calves are grandsons and granddaughters of Gentlemen 126073, the famous Kansas Agricultural College bull, who was formerly at the head of my herd. I also offer my grand herd bull, Prime Albert 213593. These cattle are not fat but are in true breeding form, and in such shape as can not fail to do good for the buyer. At this sale I will also sell a work team and a team of driving horses; also some 2- and 3-year-old mules. Also 18 grade cattle. For further information and catalogue, address

L. R. STRAWN, Half Mound, Kansas

Col. Lafe Burger, Auctioneer.

Mains Great Roller Trust Poland-China Bred Sow Sale

At farm 2 1-2 miles southeast of
Oskaloosa, Kansas, February 28, '06

70 head, including 10 young boars by Empire Chief, 4 young herd headers. Some extra young sows by Empire Chief open. Over half of my selected reserved herd will go in this sale. Half of the sows are by Empire Chief. Two-thirds of the offering will be bred to Roller Trust 37010 by High Roller 37009, the champion of Ohio State Fair and sire of 15 World's Fair winners bred by S. E. Shellenberger, Camden, Ohio.

If you want something with size and finish you will find it at this sale. Sale under cover.

Cols. Lafe Burger, Wellington; McFadden, Whiting; John D. Snyder, Winfield; and J. M. Pollom, North Topeka, auctioneers. Oscar Simmons, Nortonville, Clerk. Write for catalogue.

JAMES MAINS, Oskaloosa, Kansas

Twenty-eighth Annual Jack and Jennett Sale

Tuesday, March 6, 1906, at Limestone Valley Farm

6 miles east of Sedalia, 2 miles north of Smithton, Mo.

Sixty head of registered jacks and jennets of the same breeding and great merit that won for us 70 of the best prizes at the World's Fair of St. Louis, 1904. Terms cash. Every representation guaranteed. Sale at 10 a.m. in heated tent. One of the very best offerings ever offered at public sale. Write for catalogue and come. You will be pleased with our stock and we will be pleased to entertain you at our expense.

27 Jacks Like the Above to Be Sold.

L. M. Monsees & Sons, - Smithton, Missouri

Auctioneers: L. R. Harriman, Jas. Sparks, C. J. Hieronymus, J. Z. Wells, W. D. Ross, J. D. Thompson.

Having decided to retire from active business, I will sell at public auction at

Hope, Kans., March 6, 1906,

all my Galloway cattle consisting of 23 head of females aged from 10 months to 8 years old, and 10 bulls, registered Galloways from 10 to 30 months old. This is a herd of well-bred registered Galloways, among which are Senora R. 18200, 3d prize 2-year-old Iowa State Fair 1902, in class of 12; and first at Nebraska State Fair 1902. She is the mother of several in this sale. Poncho of Maples 11522, mother of several show animals, also several in this sale. Ephebe of Waverree 11904, dam of Ethel, champion female of Winnipeg 1901, mother of several. Sallie W. 18947 from Imported cow and others. Will also sell 15 miles 3 and 4 years old. About 40 high-grade Galloway cattle and milk cows and a lot of other stock.

Sale to begin at 10 o'clock. Cols. J. R. Burton and H. R. Little, Auctioneers. Address

Thos. Gribben, Hope, Kans.

KIRKPATRICKS POLAND-CHINAS Public Sale. Expenses off price. Buyer satisfied or pig returned and money refunded. Splendid lot of young boars ready for service. A few fancy ones for the showman. 25 bred gilts guaranteed safe in pig to Rathbinder, half-brother of Medler. No better pigs nor fashionably bred in the corn states. Have been fed and raised expressly for prolific and profitable brood stock. Write or come and see H. M. KIRKPATRICK, Walcott, Kansas.

power—
Lights, etc.

We are just putting on the market in sub-divisions to suit.

26,000 Acres of Modern Irrigated Farms

Do you know what California alfalfa is? This is the most profitable forage plant known; when once started yields 5 to 6 crops per year and 1 ton to 1½ tons per crop per acre. Sells at \$6.50 to \$7 per ton in the stack—grows for 7 to 10 years without reseeding—just figure this out.

Of course you have eaten Raisins, but do you realize their importance? This is the only successful Raisin District in the United States. \$2,500,000 of Raisins produced in Fresno County in 1905. \$150 to \$300 per acre is the average yield of a raisin vineyard, 50 per cent of which is net profit and the crop does not spoil.

This is the home of the new Fig industry. Here we produce the Calnigrud Fig. This beats the fig of Asia Minor—Cleaner, Better, Larger than the imported. Hundreds of acres already growing in the county.

This page is too small to tell you all about these ideal Farms. Write for our Booklet.

Where There are No Crop Failures

We are building a new town—Kerman—in the middle of this immense tract of land. 40 square miles of Fertile Farms, just think of it. We are building fine new modern hotel, stores, creamery, park, grading streets, piping water. Have telephones, telegraphs, rural delivery, express office. All modern conveniences. On main line of S. P. R. R., 14 miles from Fresno City. We have the finest Irrigation System in the world; 80 miles of ditches carry the sparkling water of King's River from far-away Mt. Whitney—the second highest mountain of the United States, over every quarter section of our farms at 62½ cents per acre per year.

KANSAS FARMER

Volume XLIV. Number 9

TOPEKA, KANSAS, MARCH 1, 1906

Established 1863. \$1 a Year

THE UNDERFLOW.

It took the Government scientists a long time to learn about the underflow waters of the Kansas plains what the well-diggers and farmers knew from the earliest times. The term "underflow" was formerly derided as a misnomer, an absurdity; now it is in good and regular standing as expressing an important and well verified fact.

The U. S. Geological Survey has investigated the underflow of the Arkansas, directing its labors especially to the vicinity of Garden City, Finney County, Kansas.

The work of investigation consisted in accurately mapping the water plane within a distance of 6 to 10 miles from the river channel, and in making observations by the electrical method of the rate of movement of the underflow. The slope of the water plane has been found to be between 7 and 8 feet to the mile in a general easterly direction, and from 2 to 3 feet to the mile toward the river channel from the country immediately to the north and south. At the first set of underflow stations, which extended in a north-south line about $2\frac{1}{2}$ miles west of Garden City, the velocities of the ground waters were found to be remarkably uniform, varying between 8 and 11 feet per twenty-four hours. The gravels, except occasional layers or silt, were exceedingly uniform in size and character of grain. The stations at which the determinations were made extended from the edge of the sandhills on the south to a distance of about 2 miles north of the river channel.

Similar determinations were made at a series of stations near Sherlock, Deerfield, and at points near Lakin and Hartland. The results differed little from those obtained at the earlier stations, except that more sorting of the gravels has taken place at these latter points, giving greater variety to the rate of movement. The usual velocities vary between 6 and 24 feet for twenty-four hours, the average being not far from 8 feet per twenty-four hours. The quantity of ground water that is passing down-stream is so great and the water passes through the gravel so freely that there is no surplus left to form surface streams or to form a perennial supply for the Arkansas River.

The investigation showed that in time of flood the Arkansas River contributes water to the underflow. Existing plants which supply water for irrigation along the Arkansas were carefully tested. The cost of pumping is low on account of the very large amount of water obtained when the water in the wells is lowered only 5 to 7 feet. The intention is to erect a pumping plant to collect the underflow waters for irrigation.

It is hoped that the investigation will be extended to other portions of the plains region. The "sheet water" under the uplands is by many believed to be a great moving body of water, much of which enters the soil on the slopes of the Rocky Mountains. Doubtless the "sheet water" is greatly augmented if not entirely derived from percolation of rain-water which falls upon the plains. But has it a motion similar to that of the underflow of the Arkansas?

THE HARE CHEWS THE CUD.

EDITOR KANSAS FARMER:—Will you please answer the following question in the KANSAS FARMER? Does the hare chew the cud?

URIAH SLABACH.

McPherson County.
The Bible is pretty good authority

on natural history as well as other subjects. It says in Deuteronomy 14:7: "Nevertheless these shall ye not eat, of them that chew the cud, or of them that divide the hoof; as the camel, and the hare and the coney; for they chew the cud, but divide not the hoof; therefore, they are unclean unto you."

THE GROWTH OF LAND TENANCY.

A tendency towards the centralization of lands in the hands of a few individuals is one of the modern economic developments to which attention is just now being directed in Missouri. One man in Atchison County, Missouri, owns over 46,000 acres; the Scully lands in Bates County comprise about 50,000 acres; the Hunter interests in Southeast Missouri include 35,000 acres; Rankin is said to own 36,000 acres; the Stone Land Company has 35,000; the Deering Harvester Company owns immense tracts of unknown extent in the most fertile section of Southeast Missouri, and there are many other holdings equally large. The same misfortune is developing in Kansas.

George B. Ellis, secretary of the Missouri State Board of Agriculture, calls it "an unquestionable tendency towards a tenancy system similar to that which prevails in the countries of Europe." He thinks, however, that it has not reached sufficient proportions to cause alarm for the immediate future.

H. J. Waters, dean of the Missouri Agricultural College, discerns the same movement:

"If the present tendency towards the purchase of real estate by non-residents is continued," he says, "we are at the beginning of a tenant system with all of its attendant disasters. A

tenant system of farming will seriously retard agricultural progress, interfere with the improvement of rural schools and farm homes, and affect adversely the intelligence and prosperity of the State. Let the American farmer become a tenant, and in a few generations European conditions will be duplicated on American soil; the farmer will be a peasant without spirit or ambition. Unquestionably, the present tendency is in this direction. How it will end no one can foresee."

BLOCKS OF TWO.

The regular subscription price of the KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year and one new subscription for one year with one dollar to pay for both. In like manner two new subscribers will be entered; both for one year, for one dollar. Address, Kansas Farmer Company, Topeka, Kans.

POINTS ON BREEDING SEED-CORN.

Plants, like animals, are susceptible of improvement by breeding. The fact that plants, as well as animals, are possessed of both male and female parents is now generally recognized. It opens a field for experimental work in the domain of crops as inviting and as promising of results as that occupied by the breeder of animals.

Like tends to produce like in plants

as well as in animals. The union of the excellent, wisely selected, is likely to result in greater excellence in the progeny. In plants as in animals "the feed is as important as the breed," so that wise selection must be followed by judicious culture in good soil.

Of the cultivated plants none is more pliable in the hands of the breeder than is corn; none responds more freely to good soil and good cultivation; none presents more variations on account of inherent qualities, and none more freely crosses.

To enter a little into the elementary facts about corn, it is well to recall that the male blossom of corn is the tassel and the female is the silk.

The falling of the yellow dust, or pollen, from the tassel upon the silk is essential to the production of grain and is called fertilization.

Experiments have been made in close fertilization, that is, in supplying to the silk pollen from the tassel of the same stalk. This has resulted in deterioration in the offspring. Corn naturally distributes its pollen widely, and we may well take this as a hint that self-fertilization is to be guarded against by the breeder. This doubtless takes place in nature occasionally and may be, and probably is, one of several possible causes for variations in productiveness recently discovered.

It will not be possible here to enter into a detailed discussion of points to be observed in the improvement of corn. An important practical question, however, is, how can the farmer who reads this improve his corn by breeding, and that without undertaking confusing and intricate problems? It is the purpose of this article to indicate a line of work, simple in itself, which

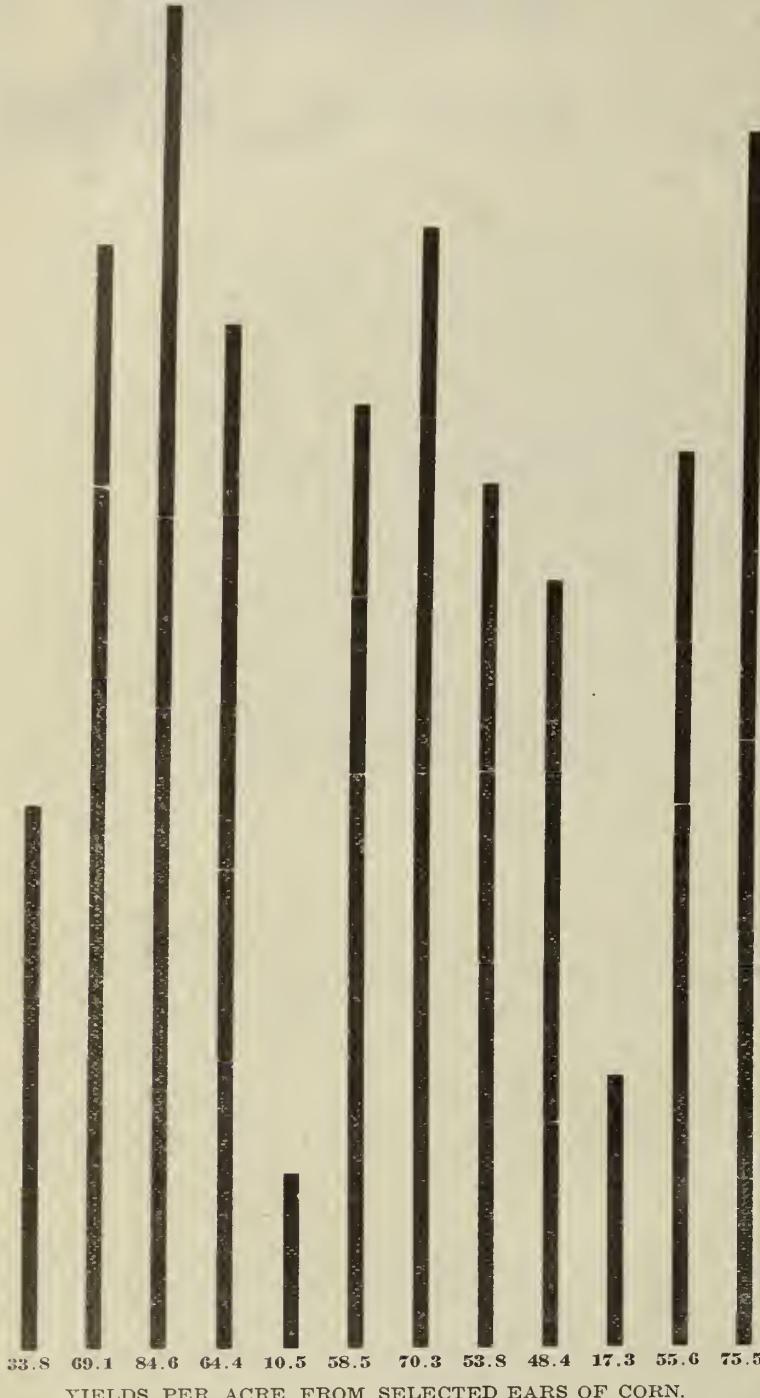

IAMS' ESPoir-DIE-RAGNES (21053).

Bay, Royal Belgian, 5 years old; weight 2,140 pounds; second prize winner at Nebraska State Fair, 1905. A "real Dutchman"—one of 120 "toppers" that must be sold at \$1,000 and \$1,500 by Frank Iams, St. Paul, Neb.

will enable the busy farmer to improve the yield of his corn by the selection and breeding of a strain suited to his conditions.

In an experiment at the Kansas Experiment Station, several of the best ears were selected from a lot of good seed-corn. The corn from each ear was planted in a row and the rows of these several selected ears were placed side by side through a field of corn of the same variety. At gathering time the product of the several ears was kept separate and the yield per acre was computed.

There was surprising variation in the yields as shown by the following diagram and table:

ear in a row as was done in the earliest above described—in shelling take out entire rows. Label the rows planted with the half of the grains from the ears, and label the half of the grains not planted so as to be able to identify them. Put away the unplaned grains in packages where the mice can not get at them and where they will have a favorable opportunity to retain their vitality until next year. Give the seed-corn rows the best of care and cultivation, and ascertain carefully the yield per acre from each half ear. Selected produce of the best rows will be good seed for general planting next year; but the fine work of breeding will be done with the half-ears that

Miscellany

Patent Rights.

EDITOR KANSAS FARMER:—On account of the average farmer's lack of knowledge concerning patent rights he is sometimes imposed upon by men who take advantage of his lack of information. But recently, several farmers of Rice County, Kansas, had an unsatisfactory experience in this respect. A certain man, representing a Concrete Post Co., came to Lyons, the county seat, and during the few weeks he was located there did business with these farmers above referred to. This man claimed the rights of a Government patent, and made broad claims for his patent, but of course failed to exhibit to these men certified copies of the letters patent under which he claimed protection. He claimed that he was not operating a patent-right scheme, yet he claimed the protection of letters patent. To evade the State laws concerning patent rights, he claimed to not offer territory for sale. By taking advantage of technicalities his deals with the farmers were so arranged that in the assignment of territory these men practically paid a high price for the territory assigned them. These farmers did not learn the number nor date of issue of the letters patent under which they were promised protection, and, having seen no certified copy of letters patent with specifications attached, they do not know the points covered by their patent. If indeed they have the protection of a patent at all. They took Mr. Betz's word for all this, without carefully investigating this matter for themselves, and gave him their notes or paid him their money. As a result these men are generally dissatisfied with both their purchase and their experience.

Patents are legal, right and proper when they serve the purpose intended by the Government. The object of the Government in granting letters patent is to stimulate and encourage the exercise of inventive genius by granting to the inventor of useful devices certain rights and protection. Letters patent give to the inventor or patentee "the exclusive right to make, use and vend" his invention "throughout the United States and the territories thereof" for a period of seventeen years from date of issue. And the patent laws of our Government grant absolute protection to the extent the patented article is actually covered by the specifications attached to the letters patent.

No person should purchase a patent right, or secure territory under a patent claimed, without first examining a copy of the letters patent certified to by the Commissioner of Patents, Washington, D. C., with copy of specifications attached thereto. By giving the number of a particular patent any person can secure from the Commissioner of Patents a certified copy of the letters patent with specifications attached, if he will enclose with his request the required fee of eighty cents. The certified copy is proof conclusive that letters patent have been granted by the Government, and the attached copy of specifications determines the points actually covered by the letters patent. And further, no person should invest money in a patent right, or expect protection under any particular patent, without first satisfying himself that the party offering a patent right or promising protection under a particular patent, is either the patentee or the legal owner by deed of assignment. The fact that parties dealing in patent rights or promising protection under a Government patent fail to carry with them, or are loth to exhibit, certified copies of the patent claimed with specifications attached, is indicative that something is wrong, either with the patent claimed or the method of business practiced. If farmers will observe these precautions, they will not easily be caught napping and will be saved loss and unsatisfactory experience along this line.

H. H. ZEIGLER.

Reno County.

Taxation.

EDITOR KANSAS FARMER:—Can we not have a little discussion on the above subject, as the time is drawing near for the assessors to meet and form a basis of agreement? Possibly some one will tell us where to find the law authorizing them to take any per cent of the real value of property for taxation instead of returning it at its real or true value as they swear they do. They do not seem to give themselves range enough in valuing property.

We have land in our county (Stafford) that sold recently as low as \$3

and some as high as \$50 per acre, and the \$3 land is the dearest. Some of our land near town and some tracts in town are worth more than \$100 per acre and some in this county is dear at \$2. The former is assessed at about \$10 per cent of its value and the latter at 50 per cent of its value. And what is true about land is also true of the improvements on it—household goods and other personal property.

It looks very bad to see a lot of stock on a farm that does not appear on the assessment list; and to see a farmer haul off or sell more grain than he gives in for taxation; and to see and know that about all of our taxpayers have cash on hand every day in the year and not a cent appears in their sworn statements. And it looks equally as bad to hear our merchants and business men tell what their stock of goods amounts to or invoices, and them to look at their sworn statement to the assessor, and know that the latter statement is false.

An old subscriber to your paper and a taxpayer in Stafford County.

Likes Cement Floor—How Made.

EDITOR KANSAS FARMER:—I read an article in the KANSAS FARMER in regard to cement floors and asking those to write who had experience in that kind of floor. In 1903 I put a floor in my horse barn and will say that it is the best floor that I ever had. I have tried dirt floors and board floors, and the cement beats them all. I made the ground solid, took coarse gravel nine parts, cement one part, mixed them thoroughly, wet them when mixed and put on that concrete six inches thick and leveled down. When that set so we could work on it, we took coarse sand three parts, and cement one part, and gave it a slope of four inches, and troweled it smooth. It is water-proof and all right, and it cost me \$5 less than the board floor did, and is ten times better. Use plenty of bedding and I will guarantee it to be satisfactory.

F. M. STAMBACH.

Sedgwick County.

Reasonable Switch-Board Rates.

EDITOR KANSAS FARMER:—Are you sure that you are well advised as to the price usually charged by telephone companies, for central service of rural or farmers' lines?

I notice in the last KANSAS FARMER that you say to "A Subscriber" from Harvey County, that 50 cents a 'phone per month is cheap, and recommend him to contract for as long period as he can at that price. I am told that in Russell and Wilson Counties and in other parts of this country, the price is from 15 to 25 cents per 'phone, and I should think 50 cents an exorbitant price, as this is for switch-board service only, and does not include any expense for care of line, etc. I do not wonder that 'phone companies are anxious to contract for a long time ahead at that price, where individual 'phones cost an average of only \$1 per month.

Agriculture**Seed-Corn, Moles, and Birds.**

EDITOR KANSAS FARMER:—Please let me know through the columns of your valuable paper the proper method of treating seed-corn with coal-oil or turpentine to prevent moles and birds from taking it.

G. H. COLEMAN,
Montgomery County.

You will find it difficult to make any application of strong repellants to seed-corn that will prevent the attacks of mice and birds that will not also endanger the germination. This danger will be considerable in the use of the caustic fluids that you mention. In his work on "The Cereals in America," Professor Hunt says that the application of coal tar is effective, but adds that there is danger of decreasing the germination. The best mode of protection against the mice is undoubtedly their destruction by the use of poison, for which purpose the poison supplied by the State Agricultural College for killing gophers is best adapted. This poison is a solution of strichnine with other substances to make the bait attractive to the mice, and is applied by soaking corn in the liquid, and placing the poisoned grain in the places that the animals frequent. This liquid does not appreciably affect the germination as has been found where the baits have been covered, as the corn seems to grow as well as where the poison is not applied. This poison is supplied by the college at the cost of making, \$1.10 per can, and will be shipped on orders enclosing the price. E. A. POPENOE,
Field Agent.

Kansas Experiment Station.

Seven Questions.

I want to know if it would be advisable to send to Manhattan or Hays City for seed-corn? Would it do as well here as it does there? Which is the best yielder, the yellow dent, white, or bloody butcher? What will be the cost per bushel? Do they test the corn they send out for seed at either place? Is there any difference in the way corn is detassled, whether by cutting or pulling? How can a person tell what the ground needs most of all?

Trego County. J. L. MANZER.

It would be advisable for you to get western-grown seed-corn. I do not think you can secure any seed from the Fort Hays Branch Station at this time. Corn grown as far east as this station will not succeed well with you the first season. I refer you to E. W. Albright, Brewster, Kans., as a Western grower of corn. As to whether the yellow, white, or bloody butcher type of corn will yield best will depend on whether the corn is bred and adapted for growing in your part of the State; also upon the variety. We make only general tests of the seed-corn which we send out; that is, we test the germination of a large batch of corn by taking a few kernels from a large number of ears. I have milled circular giving names of varieties of corn which we have for sale, with price of seed per bushel.

In detasseling corn it is better to pull the tassels than cut them off, as by cutting off the tassels you are apt to injure the leaves. The objection to detasseling by pulling is that the stalks are often so high in this part of the State that the top is not easy to reach, but in Western Kansas this will not usually be the case. About the proper time for detasseling, namely, just when the silks are beginning to appear and the tassel are fully formed, the tassels pull very easily.

I do not fully understand your seventh question. You probably refer to the use of manure and fertilizers. As a general answer regarding the use of fertilizers in Western Kansas, I would not recommend the use of chemical fertilizers. What our Western lands require more than anything else is more humus and organic matter. This can be supplied by dressings of barnyard manure or by growing crops for green manuring. One of the best crops of the annual legume class to grow is cow-peas. This crop may be planted in June and plowed under as green manure in the latter part of summer, or the crop may be used for pasture, or taken off for forage, in which case it would simply be a crop in rotation and would not furnish so much organic matter and humus as when plowed under for green manure. Other ordinary crops may be used for green manuring such as wheat and rye sown in the fall and plowed under late in the spring, in preparing the ground for corn. Kafir-corn or other cultivated crops. Spring-sown crops such as barley, sorghum, Kafir-

corn, etc., may be used for green manuring, plowing the crop under early enough in the summer so that by harrowing and disking the land may be put into good condition for sowing wheat in the fall. A thorough system of crop rotation put into practice and carried out in your part of the country will keep the land in better condition for producing large crops and at a less expense than any other method of cropping and fertilizing which I can recommend. It will not pay at the present time to use chemical fertilizers on our western land for growing ordinary crops such as wheat and corn. I enclose copy of my notes on crop rotation which may be of some assistance to you in introducing a system of cropping which will improve and maintain the fertility of the soil. A. M. TENEYCK.

Spring Crop to Precede Alfalfa.

What do you advise sowing for a spring crop on ground which it is intended to seed to alfalfa next fall? Please give directions for seeding alfalfa, and inform me where to purchase good seed.

J. SCHROLL,
Lincoln County.

Good crops with which to precede the sowing of fall alfalfa are wheat, oats, barley, millet, field-peas, cow-peas, or cultivated crops, such as potatoes or early corn which can be taken off early enough so that a good seed-bed can be prepared by disk and harrowing before the last of August or first of September when the alfalfa should be sown. Cow-peas are a very excellent crop with which to precede the sowing of alfalfa. The peas may be sown from the first to the middle of June with an ordinary grain-drill in a well-prepared seed-bed, sowing in drills eight to twelve inches apart. Harvest the crop for forage and prepare the seed-bed for sowing alfalfa by disk and harrowing.

As a rule, I prefer to disk and harrow in preparing for fall seeding of alfalfa rather than to plow late in the summer or early in the fall. Even in grain stubble, unless the ground is too weedy, disk and harrowing will be preferable to plowing. However, if thought desirable, the stubble ground should be plowed soon after harvest and a seed-bed prepared by harrowing at intervals until seeding time. Also it is desirable to use a sub-surface packer in order to pack and pulverize the soil and secure a well-settled, finely pulverized seed-bed. A seed-bed for alfalfa should not be loose and mellow below the point at which the seed is planted, but should be rather firm below the seed and mellow but finely pulverized above the seed. Care should be taken to conserve the soil moisture and to sow when the ground is in the best condition for germinating the seed and starting the young plants.

A. M. TENEYCK.

Field-Peas and Oats.

I have planned to seed my last year's corn-field to Canada field-peas and oats next month.

I read a copy of the report of the meeting of the Kansas State Board of Agriculture which said that Canada field-peas should be plowed under, say four inches deep. I have interpreted that statement as meaning the ground should be cleared of all trash, the peas sown on the ground and then plowed under, making but one plowing. Am I right?

I am doing this for both fertility and forage. I think the report said two bushels of peas to the acre. I shall, however, plant one bushel each of peas and oats.

J. A. MASSA,
Wyandotte County.

I believe a good method of planting field-peas is to plow the ground first four to eight inches deep, as may be your custom, and after preparing a good seed-bed plant the peas with the grain-drill in drills six to twelve inches apart. It is well to plant rather deep, probably three inches deep in a well-prepared seed-bed. I have never tried the method of plowing under peas, and although I have no doubt that this would give good results where the crop is grown especially for fertilizer or green manure, yet you would hardly get so even a stand of peas or so large a crop as by preparing the seed-bed and planting the peas as described above. It is usual to plant about two bushels of peas per acre when sown broadcast or in close drills for forage or green manure. It would not be necessary to remove the trash from the ground provided you plan to plow the peas under. Simply scatter the peas broadcast or go over the ground with the drill in order to distribute the seed and then plow, taking care not to plow the peas under too deep. After plowing, it would be well to give a thorough harrowing in order to pulverize the

soil and put it in good seed-bed condition for starting the peas and growing the crop.

Your method of sowing field-peas and oats together for forage is a good one. This is preferable to sowing peas alone because the oats hold the peas up, making it easier to cut the crop with a mower. A bushel of peas and a bushel of oats per acre make a good combination, although it may be desirable to sow a little more than a bushel of oats, say a bushel and a half of oats and a bushel of peas.

A. M. TENEYCK.

Cure Alfalfa in Cocks.

EDITOR KANSAS FARMER:—I notice several suggestions as to the best method of curing alfalfa hay in this part of the country, where rains are common during the season for cutting it. Most farmers seem to require large sheds or some other too expensive form for an ordinary farmer with a small piece of alfalfa.

When I was a boy on a farm in New England, I was taught that the proper way to put up red clover was to put it up in cocks as soon as the dew was off and it was slightly wilted, and let it cure in the cocks; if necessary we opened it up once or twice to prevent it spoiling, depending upon the weather, of course. We were always provided with covers about three feet square to go over these cocks in case of a shower or a rainy day.

Would this not be a simpler and less expensive method for the ordinary farmer? I have had my experience with alfalfa and I hope to profit by some other person's experience.

Kansas City, Mo. E. E. HOLMES.

Sows Alfalfa in Early Spring.

EDITOR KANSAS FARMER:—As it is nearing the time for spring sowing of alfalfa I thought it might be of interest to some of your readers to give you a little of my experience.

I have 100 acres of alfalfa, and every acre a perfect stand and it is said to be as fine a field as there is in Kansas. My alfalfa was all early spring sown, 70 acres in 1902, 20 acres in 1903, and 10 acres in 1904. My field is rich, level, Medicine River bottom. The field was literally full of cockle-burs. I commenced plowing very early in March, plowing seven to eight inches deep and followed each day with harrow, then cross-harrowed, rolled, harrowed and rolled again. I then sowed about twenty pounds of the best seed per acre, with an end-gate, broadcast seeder and lightly harrowed after seeder. I sowed the latter part of March. The alfalfa came up in a few days and was 7 to 10 inches high before cockle-burs made an appearance; but when they did come they were as good a stand as the alfalfa. The burs finally caught up with the alfalfa and all were about knee-high. Then a very close mowing was commenced and pushed until the whole field was gone over. Both burs and alfalfa were a quick, sappy growth and were allowed to lay on the field as the mower left them. The hot sun dried them up wonderfully and the alfalfa sprang up at once and there has not been a bur in the field since. I mowed twice and got considerable good hay at each cutting. Does any one suppose that if I had waited until all danger of frost had passed I would have succeeded? No, the burs would have come up with the alfalfa and smothered it out.

On 20 acres of this sowing the ground froze hard enough in one night to bear up a horse, with the alfalfa partly through the ground, but it never hurt it. Alfalfa is about the first vegetation to start in the spring and it stands to reason that it should be sown early in order to get ahead of weeds; then constant and close mowing will do the rest. I do not harvest fifty pounds of weeds in a summer's cutting (4 crops). I usually harrow thoroughly in early spring and fight gophers continually. The price of keeping a good alfalfa-field is eternal vigilance.

I delight in sowing alfalfa on weedy ground—but look out for grassy land. I think the only way to get a stand on grassy land is to sow early in fall; then in spring it gets such a start of the grass that it keeps it down. But on grassy land with spring sowing, the grass saps and weakens the alfalfa until it often dies, because mowing does not kill the grass but does kill weeds. I allowed 40 acres to seed second crop last year and thrashed 172½ bushels of fine seed and sold it for \$8 per bushel. From this 40 acres I cut a heavy first crop, then seed crop, and last a splendid third crop for hay. When I cut the first crop there were millions of worms. They resembled cut-worms and under the shocks and windrows one could rake them up by the peck. I had a few hogs running in the field and noticed

Bietz Lanterns

You never heard a man who carries a Dietz Cold Blast Lantern complain of a leaking oil pot. It's solderless, it's tested by air pressure, leaking is an impossibility. Count on your fingers the things you think a lantern should be: Convenient, safe, long burning, never blow out, cleanly, no smoking or sootting, convenient locking levers—they are all in the Dietz. Then the greatest feature of all, the one everybody knows about and everybody prizes, is the

"Clear, White Light of the
DIETZ."

You ought to know all about the lantern you buy. We want you to know all about the Dietz Cold Blast. Our lantern book will explain. It's free. Shall we mail you a copy?

that they were working very industriously at windrows and shocks, and on close inspection I noticed the hogs were feasting on worms. I then bought 160 head of shoats and put them in the field (it is hog-fenced) and they soon cleaned up the worms. When the seed-pods were beginning to ripen I noticed the hogs were eating them. I put the hogs in the feed-pen, fed them on corn and hay a few weeks, and sold them at a great profit.

My experience is to sow weedy land in early spring, and grassy land in early fall. Of course weedy land could be fall-sown. Our worst trouble here in fall-sowing is lack of moisture. I always sow broadcast. The seed is evenly put everywhere on the ground, while drilling puts it too thick in the drill-row and there is too much space between rows without seed. In the drills it is crowded too closely for rapid growth. I do not under any conditions want a nurse-crop; simply nurse the alfalfa by constant attention.

Barber County. M. T. WILLIAMS.

Success With Alfalfa at Small Cost.

EDITOR KANSAS FARMER:—As it is nearing the time for alfalfa-seeding I will venture a few suggestions to those interested in the matter.

The usual labor and expense is so great and the failures so numerous that the farmer though admitting the great value of an alfalfa-field, is deterred from making the attempt to secure the prize. I will risk the statement as a preface to my suggestions that a stand of alfalfa can be secured as cheaply and as surely as a stand of oats.

I will consider first the usual causes of failure. My experience and observations convince me that nine-tenths of the failures come from plowing and late spring sowing. In all but the eastern third of the State fall-sowing is impracticable, on account of prevailing fall drouths and grasshoppers. Freshly plowed ground is no more fit for alfalfa-seeding than for blue-grass or other grasses. You can seed an old road-bed easier than a nicely prepared garden bed. Never plow, no matter how forbidding your land looks. Any stubble- or corn-field on your farm is now ready for the coming spring seeding. It needs no years of training. You need the alfalfa and you can not afford to wait. "Do it now" should be your motto.

Now is the time to break down, rake and burn the weeds and corn-stalks. Then about the middle of March harrow until you have an inch or so of loose earth. If the corn ground is ridged, disk lightly so you can harrow down level. Now you are ready for seeding.

The best implement for seeding is an old-fashioned shoe-drill with seeder attachment. The attachment will cost about \$6 and your neighbors will want to hire the drill when you are through and you will soon have your money back and the drill for future use. The disk and hoe-drills run too deep and you had better broadcast. Get the best seed. Don't consider the price.

Now the time of seeding depends somewhat upon the season. I would say about March 20 in the southern counties of the State and on up to April 10 in the northern tier. If anything hinders you from seeding before April 10 don't seed at all but wait till next year. The chances are against your getting a stand after April 10. I have seeded every month from March to October and got a good stand; but the conditions must be all in your favor if you sow out of the proper season. In the early spring there is always sufficient moisture to bring up the plant. I got a good stand on twenty acres one of the driest seasons ever known in Kansas.

The weeds and grass do not bother early sowing. They do not start thickly till about May 1 and at that time the alfalfa is four to eight inches high, with vigorous, ample roots and no amount of dry weather and weed-choking will kill it. You may if you like broadcast on a March or April snow and it will cover itself. If you use a drill, seed six pounds to the acre. If you broadcast, use eight pounds. One pound of seed will give seven grains to the square foot. Four plants to the square foot is a good stand. If you ask why I sow 40 to 60 seed grains to the square foot I answer I do not know. Ask the fellows who put 140 grains to the square foot. I have sowed 20 pounds and 6 pounds of the same kind of seed on the same day with all the conditions the same and there seems now to be no difference in the stand. It all looks well. If too much seed is sown, I suppose that in time there will be worked out the survival of the fittest and your stand will be about the average. But sow no more than necessary and your

plants will be more vigorous to withstand dry weather and weeds. When you broadcast cover with slanting-tooth harrow. The plan I have suggested has always brought me success, while plowing and waiting till danger of frost is past brought me failure and depleted purse.

As to cost, the items are about as follows:

	Per acre
Preparation	\$.04
Sowing25
Covering15
Seed	1.00
Total	\$1.80

The old way of seeding cost, for

	Per acre
Plowing and harrowing.....	\$1.75
Sowing25
Covering15
Seed	2.50
Total	\$4.65

This shows the difference between the cost of success and failure.

C. B. DAUGHTERS.

Planting Corn and How to Raise It.

JOHN D. ZILLER, HIAWATHA, KAN.

[This essay was awarded first place in the essay contest on "Planting Corn" which was conducted under the auspices of the Kansas State Corn Breeders' Association in 1905, winning the prize, a Victor corn-planter, donated for this purpose by Fuller & Johnson Mfg. Co., Madison, Wis.]

THE SEED.

The first and most important part in raising a good corn crop in my estimation, is pure seed, seed that is bred for a purpose and with a fixed standard and type of purity. If you do not have it, send and get it from some reliable seed-corn grower, one who grows his own seed, and not from a merchant who buys his seed-corn by the car-load from Tom, Dick and Harry who do not know a pure-bred ear of seed-corn when they see it. If there is one thing that contributes more than another to the attainment of success in farming, or one thing that is absolutely necessary in agricultural success, it is the knowledge of pure seeds.

My effort as a breeder and grower of pure seed-corn in the last eighteen years has been to get the heaviest yielder and best feeding corn grown. Having tested a great many varieties, I know from experience what I am talking about. For illustration: If I send to some seed-corn grower for pure seed-corn, and after the crop is grown it is impossible to tell the type of corn I planted from a very inferior corn, I discard it and say, the man I bought the seed from don't know anything about breeding and selecting seed-corn. Like will produce like, in corn the same as in pure-bred stock. If he had bred that corn right and kept it pure, the crop would show.

In selecting seed-corn with many farmers, the main object had been to get seed that would grow. This is important but it is only one of the several important matters to be considered. A thorough knowledge of what you are planting, so you will get what you want after it grows is the question that should be decided. There is no question but that the annual yield of corn in the great corn-belt would be greatly increased by careful selection and change of seed-corn to one of the standard improved varieties.

THE SOIL.

We all agree on clover sod or new ground as the ideal place to raise corn, but we can not have this every year; and again it is absolutely impossible to lay down a fixed rule about plowing up new ground of meadows, for we often have to keep our meadows and pastures two or three years longer than we want to on account of not being successful in getting more land seeded down. There is one thing we can all do and all have, and that is fall plowing. From experience, my judgment is that it is best to plow in the fall all we can for corn. I have never had a failure on fall plowing. By plowing it in the fall and putting under a crop of trash and stalks, by spring it is all nicely rotted, and the soil has a better chance to freeze and pulverize, also to store up an abundance of moisture for the next summer's crop. This soil will stand the drought and also excessive wet weather better than spring plowing, and work a hundred per cent nicer.

I have often heard farmers say they would plow more but want to pasture the stalks. In my opinion there are few fields of stalks that are worth what the fall plowing would be to the next crop. Just as fast as one field of stalks is husked I cut the stalks and plow them under about six inches deep. I keep the plows going till the ground

is frozen so I can not plow; then we all husk corn.

"Too dry to plow" is an old expression among the farmers. Let me tell you how to plow when they say it is too dry. The first thing you do, throw away your old half-worn plow-lays and go and get new lays put on, and I will guarantee you can plow and do a good number-one job, and no other kind pays. Whenever a plow-lay gets worn out so a farmer can not do good work in dry ground, it is time for a new one, and any farmer can pay for one in horse flesh and the difference in plowing on every ten acres he plows. Next, keep your plow sharp; this as a very essential part in good plowing. Another very important part in raising a good crop of corn is barn-yard fertilizer. I make it a point to keep all manure cleaned up around stables and yards and hauled out over the ground, spread very thin, and before the ground is listed I go over it with the disk to pulverize it and work it thoroughly into the soil.

PLANTING THE CORN.

In the spring as early as the land will permit, I harrow the ground down level by riding the harrow, and by the time the ground is ready for planting the weeds have about all made their appearance; then I list in rows three feet and six inches apart.

One-half day behind the lister after the ground gets warm I commence to plant with a John-Deere, number-nine, edge-drop corn-planter, which is one of the most complete corn-planters I ever saw. It drops one kernel at a time 99 times out of a hundred.

To insure a perfect stand I put all seed-corn through a Graham, seed-corn sorter before planting to take out all round and imperfect kernels that are missed by shelling off the butts and tips, thereby insuring a perfect stand. One great mistake made by many farmers is planting corn too thick. This is one cause of so many barren stalks and nubbins. One kernel in a place every 18 to 20 inches is enough on ground that has been corned for two or three years, and 16 to 18 inches on new ground or stubble land will bring more corn and better quality than closer.

CULTIVATING THE CORN.

It is almost impossible to lay down a rule to cultivate corn by, as the weather has a great deal to do with it. I use the Kirlin, two-row disk cultivator, the first time over, then harrow, then cultivate with a six-shovel riding cultivator. In shallow cultivation to keep the ground loose on top plow two or three times over as the corn or the ground needs, aiming to lay corn by with a fine loose mulch of soil to keep the ground from cracking open.

After forty-two years of constant corn-growing and eighteen years of pure-bred corn, I have this to say: the farmer that raises a crop of corn every year is the farmer that is coming to the front.

	Per cent
Pure-bred seed-corn.....	30
Planting at proper time.....	10
Ground in fine pulverized shape, fall plowed or rotated with other crops	30
Thorough cultivation	30
Total	100

Follow the above rule and you can raise a good crop every year.

Farm Notes.

N. J. SHEPHERD, ELDON, MO.

Stock with inherent good qualities will make money on the same feed and care which with a scrub will bring only loss.

A hundred rods of fence on a farm above actual need becomes a tax on labor and material that may be better cut off by removing the fence.

It is not enough to say, feed the products of the farm as far as possible, but they must be fed in such a way as to give a profit and save the manure.

Animals of vicious habits should never be used for breeding-purposes, as vices are transmitted. By careful breeding in this respect the disposition of the animals can be positively controlled.

Unless young stock be well cared for and kept constantly growing and in thrifty condition during the whole year, it is poor capital and will inevitably entail loss upon the owners.

For growing alone blue-grass is one of the very best grasses that can be grown on the farm. Once established it will withstand heavy trampling and close clipping with less damage than any other grass.

None but the brave deserves the fair.—Dryden.

SAVED \$100.00

MR. B. J. KENDALL CO.,
Gentlemen: — I have a \$100.00 horse that a friend of mine gave me for \$1.00 provided I would take him out of town and save him from pain, to have him hauled out when dead. The horse had Spavin, both shoulders, but your Spavin Cure brought him out all O. K.
Respectfully, L. G. Bird.

Feeding Questions.

EDITOR KANSAS FARMER:—I am a quarter-section farmer and keep only stock enough to pasture on about 40 acres. I keep some cows and raise their calves, and I fatten a few steers of my own raising every winter. As soon as cold weather sets in, I stanchion all my cattle, and about 20 head of calves, in a good barn with plank floor and tight manger. I feed cows that I milk and steers that I intend to fatten, cornmeal ground in a sweep-mill with one-third bran. Now, I would like to know if shelled corn would be better for the steers. Some say it does not pay to stable cattle, but when we clean the stable and haul out the manure, we go after a load of corn-fodder. Of course it is work to clean out, but I tell them it takes less feed.

I feed all the alfalfa hay my cattle can eat through the night; daytime I feed corn-fodder in the feed-lot and alfalfa, too, in mangers. I also raise about 10 acres of sweet corn every year for winter feed. I plant it thick with a planter on good ground. It grows 8 feet high. I husk out enough of the best for seed. It keeps a corn-binder pretty busy to go through it. Now, what are we going to do with the rats? Myself, boys, and dog have killed 77 since January 1, 1906. Can you tell me the best way to poison them?

Would it not pay better not to raise any sweet corn and raise all field corn, cut it all up and shred it to get it away from the rats? Corn shocks standing in the field all winter feed a good many rats. Long life and prosperity to the KANSAS FARMER. B. REICHERT.

McPherson County.

I rather doubt the advisability of confining fattening cattle as you are doing. The fattening steer is not so susceptible to cold as the dairy cow and quite a number of experiments in the stall-feeding of steers show that it is more economical to feed in open yards. Of course a wind-break or shelter of some kind is a great advantage. I do not think I would suggest any change in the ration which you are feeding to your milch cows and growing calves, but fattening steers, I believe, could be more economically fed on corn-and-cob-meal with alfalfa for roughage. I should prefer the corn-and-cob-meal to the shelled corn, although the cost of grinding is somewhat more than for shelling. If you have an abundance of good alfalfa hay, you should be able to get along with a very limited amount of bran or other purchased mill feeds. Alfalfa is a wonderful feed for all kinds of stock, and the farmer who has it is in a great measure fairly independent on the feed question. I see no special reason for growing sweet corn as you are doing. Field corn can be grown thickly in the same way for fodder and will produce larger yields per acre. Shredding fodder is certainly a very successful way of handling it and you will get more feeding-value from it and you will find it a great advantage in handling the manure. I hardly know what to suggest in the way of getting rid of rats. I am trying to solve that problem myself and find it a difficult matter. You might try poison if you could do it so as not to endanger other animals. The zoological department here prepares a special poison for gophers, prairie dogs, etc., which is also recommended for rats. This is sold at the bare cost of preparing.

G. C. WHEELER.

Texas Fever in Cattle.

A publication will soon be issued by the U. S. Department of Agriculture on the subject of Texas fever, a disease which has been a very serious obstacle to the development and prosperity of the cattle industry of this country, especially in the South. Some years ago it was conclusively proven by the experts of the Bureau of Animal Industry, after extensive investigations, that this disease, which is also known as

splenic fever and Southern cattle fever, is transmitted by the cattle tick, and that without this Texas fever tick there would be no Texas fever. Later experiments have been made with the object of determining the best method of eradicating the ticks and preventing the disease. The results of these various investigations are presented in Bulletin No. 78 of the Bureau of Animal Industry. The bulletin contains valuable information for stockmen concerning practical methods for eradicating the Texas fever tick from both the animals and the pastures, and also describes measures to be adopted for the prevention and treatment of the disease itself.

Copies of this bulletin may be had by applying to the Bureau of Animal Industry, Washington, D. C.

Rape—Underground Silos.

I would like to have some one who has had experience with rape, tell whether it is good forage for brood sows, pigs, and hogs in general and will cows eat it?

I have sixteen acres of bottom-land that I want to plant in rape if feasible; if not I would like to know. I have forty acres of rye and will sow twenty acres of oats for the hogs.

Will alfalfa keep in a silo and is a silo 15 feet underground as good as one on top of the ground?

CHARLES SMITH,

Kay County, Okla.

The rape plant (*Brassica Napus*) is without doubt one of the most useful forage plants introduced into the United States. It has been grown for forage in Europe and Great Britain for fully two hundred years. It bears a very close resemblance to the rutabaga in its early stages of growth. It does not grow a fleshy root, but sends out rootlets in all directions into the soil and is considered to draw heavily on the soil, but as it is usually pastured off by animals the soil is not greatly depleted of its fertility. It is an annual plant, and while there are several varieties, the Dwarf Essex is best adapted to the conditions in the United States. The seed is all imported at present. It is best adapted to moist conditions and a moderately cool climate. In your section it will undoubtedly be of value if planted early in the spring. The sixteen acres of bottom-land you refer to will undoubtedly be rich enough and moist enough to yield large quantities of forage. It will grow best in rich, moist, and free-working soils, not doing so well on stiff, clay soils. The seedbed must be well prepared and as clean as possible. It should be sown early, either broadcast or in drills. Where it is the sole crop and sown broadcast, three to five pounds of seed are required per acre. If drilled in rows, one or two pounds will be sufficient. In from eight to twelve weeks after sowing it will be at its maximum growth for pasturing. Hogs should not be turned upon it while it is small or it will be destroyed. You speak of sowing oats for hog pasture and I would suggest that rape and any of the common cereals may be sown together to advantage. It will also do well for hog pasture sown with sorghum. If you pasture it off before it has reached its maximum growth it will produce a second growth. The amount of the second growth depends upon the richness of the soil and the character of the season. If allowed to become too old and tough, you may find that your hogs will refuse to eat it. You will find it better to turn the hogs on when it is from eight to twelve inches high. We make a practice here at the college of plowing up all of our feed-lots in the spring and sowing them to rape, thereby getting much forage from what would otherwise be useless ground during the summer season. If the season is favorable, we practice sowing a succession of crops so as to have a new patch coming on to take the place of the one pastured off.

Cows will eat it but care should be taken that they are not turned on it with empty stomachs. There is danger of bloat in cows or sheep if such care is not taken. It is also liable to taint the milk of cows, hence is undesirable pasture for milch cows.

Alfalfa may be placed in a silo in the green state but is a little more difficult to keep than corn as it does not settle so compactly, hence a greater loss takes place from spoiling on the surface and down the sides. Alfalfa silage has been made at the Kansas Experiment Station for the past three years, and is being fed to the dairy cows at the present time. It is advisable to tramp it very thoroughly around the edge while filling and it is also a good plan to have some corn silage to run in on top to aid in settling it. Silage may be made in an underground silo as well as one on the

ground. There are objections to the underground silo, the chief of which is that it is a serious problem to get the silage out. There is also danger of gases forming which would be fatal to human life in a silo placed in the ground as you suggest.

GEO. C. WHEELER.

[It is suggested that you send 10 cents to the Silage Manufacturing Co., Salem, Ohio, for their book on "Modern Silage Methods," mentioning the KANSAS FARMER. It is an exceedingly valuable work on the subject besides containing feeding tables and other valuable information for the stock feeder.—Editor.]

Slaughter Tests of Hog-Feeding Experiments at Kansas Agricultural College.

The animal husbandry department of Kansas Agricultural College has just completed a hog-feeding experiment and marketed the hogs at the Chas. Wolf packing plant in Topeka where slaughter tests have been obtained of the different lots.

There were ten hogs used in each lot and the experiment began October 9, 1905, ending January 29, 1906, a period of 112 days. The object of the test was to determine the value of tankage and alfalfa hay as supplement feeds with corn. The following table gives the results as to weights and gains and cost of feed and grain:

No. of lot.	Pigs in lot.	Weight Oct. 9. 1905.	Weight Jan. 29. 1906.	Total gain lbs.	Ave. Daily gain lbs.	Total lbs. feed eaten.	Total cost of feed.	Cost of gain per cwt.
I	10	1290	2400	1110	1.00	Cornmeal 7690	\$48.05	\$4.32
II	10	1275	3250	1965	1.75	Cornmeal 7848 } Tankage 1552 }	\$80.07	\$4.07
III	10	1310	2510	1320	1.18	Cornmeal 7875 } Alfalfa 1340 }	\$54.53	\$4.13

Fed 112 days.
Feed prices—Cornmeal 62½ cents per cwt.; tankage \$2 per cwt.; alfalfa \$8 per ton.

The hogs were shipped to the packing-house and brought the following prices: Lot I. \$5.32½ per cwt., lot II. \$5.40 per cwt., lot III. \$5.35 per cwt.

When the carcasses were sufficiently cooled they were cut up in the presence of representatives of the animal husbandry department. Every facility for obtaining the necessary data was freely provided by J. B. Nicholson, superintendent of the plant, a special cutting being made of these three lots in order to allow more time for the work.

Dr. De Wolf, the Bureau of Animal Industry expert stationed here as inspector, pronounced the whole bunch as unusually healthy. The lymphatic glands were all large and soft and only one case of parasitic infection of the liver was found.

They all had more leaf lard than the average hog. The amounts for the different lots were as follows: Lot I. 90 pounds, lot II. 94 pounds, lot III. 90 pounds. Although the hogs in lot II. were heavier and seemed fatter on foot, the leaf lard was but slightly greater than in the other two lots.

Mr. Nicholson stated that the flesh and fat of lot II. seemed firmer than the others in the warm condition. The hogs fed alfalfa hay showed a very fine quality of lean flesh and the fat was not so heavy on their carcasses. The percentage of dressed weight for the three lots, not including the heads was as follows: Lot I. 76.6 pounds, lot II. 73.5 pounds, lot III. 76.1 pounds.

Dr. S. C. Orr of Manhattan secured some very fine photographs showing the different cuts from all three lots which will be used when the results of the experiment are published in detail by the Kansas Experiment Station.

Out There in Kansas.

I. D. GRAHAM BEFORE THE KANSAS IMPROVED STOCK BREEDERS' ASSOCIATION.

Kansas people love their State. They believe in it. They like to talk about it. It is a delight to live in it and yet a constant marvel to all its residents. The common, every-day facts of Kansas become hyperbole in other States. Her history is written in capitals. From her broad and fertile plains her farmers produced in 1905 agricultural products to the value of \$238,818,666, and possessed live-stock worth \$169,821,157, or a total of \$408,639,823 as a result of their labors. They grow big men in Kansas to follow the greatest of all human callings, agriculture.

And there are some big things "out there in Kansas." Some of them are the biggest things of their kind in the world. For instance, Kansas has the largest Agricultural College in the world. It is located at Manhattan, and enrolls 1,600 students annually. It has more students in its four-years' course in agriculture than have the agricultural colleges of Iowa, Illinois, Michigan, Wisconsin and Missouri combined. It has more graduates and former stu-

dents in Government employ than any like institution. E. R. Nichols is president.

Kansas has the largest agricultural experiment station in the world. It is located at Hays, and includes 4,500 acres, devoted solely to experiments in agriculture. It is a branch of the Agricultural College Experiment Station at Manhattan and is under the control of its board of regents.

Kansas has the largest Improved Breeders' Association of any State in the world. Its membership numbers about 1,000 of the State's brightest and best farmers and breeders. It holds annual meetings at the State Capitol in January. H. A. Heath, Topeka, is secretary.

Kansas has the largest county breeders' association in the world. The Marshall County Hereford Breeders' Association has a membership of 60 men and women, each of whom owns a herd of Hereford cattle. F. W. Preston, Blue Rapids, is the secretary.

Kansas has the largest herd of home-bred Aberdeen-Angus cattle in the world. This is the Sunflower herd, belonging to Parker, Parrish & Miller of Hudson. It numbers 325 pure-bred animals that were all bred at home.

Kansas has the largest Berkshire breeding establishment in the world. This belongs to E. D. King of Burlington, and numbers more than 100 brood sows with a product of some 1,200 pigs each year. There are larger

Red Poll	3	94	109.80	1	48	70.00

The few big things mentioned here are only given as samples. Kansas has only just begun her real, active life as a State, but she began right. Kansas now stands in the very front rank of States in her low rate of illiteracy and her high rate of morality. Only one Kansan in each 2,000 of her population is a convicted criminal, and her population came from the ends of the earth.

Of her possibilities in the future nothing need be spoken. Man was never endowed with a fairer heritage than that enjoyed by the Kansan and the possibilities are in his hands.

Dogs and Sheep.

A reader in a Southern State advises us that he is going extensively into sheep now that the Legislature of his commonwealth has passed a dog-tax law creating a fund to recompense farmers for sheep killed by dogs. At the same time comes a letter from an Ohio reader, commanding a position taken by this journal, and urging it to make a campaign for a dog-tax law in every State. The Buckeye State has a dog law, but under its enforcement we understand the poor man's dog escapes taxation, and it is usually the cur of the poor man which does the sheep-killing. A man who owns a good dog will offer no objection to a tax to be turned into a fund for the protection of flockmasters. He knows his dog is worth the cost of the tax. No man has a moral right to keep a cur dog. Such a dog produces no profit to the owner, and is a menace to sheep and sometimes to human beings. The maintenance of useless dogs on the farm or in the city should be discouraged by a tax. While a man has a legal right to keep a cur, so long as it is not a menace to the community, he should be discouraged from so doing by a tax that will contribute toward a fund for the payment for sheep killed by dogs. The administration of the dog-tax law and the equitable distribution of the fund in case of killed or worried sheep is a hard problem to solve practically, but every effort should be made to protect flockmasters from the ravages of farm or town-kept dogs.—Breeder's Gazette.

The Avery Percheron Sale a Record-Breaker.

The closing-out sale of Henry Avery & Sons, held at Manhattan, Kans., last Saturday was a great event. There were buyers present from Arizona, New Mexico, Colorado, Nebraska, Iowa, Illinois, Missouri, and other States. The sale was scheduled to begin at 12.30 p.m., but long before that time the large sale pavilion was packed to the limit and many people were unable to gain entrance. Colonel Woods held the block while Colonels Harriman and Brady worked in the ring. The bidding was lively and the horsemen who wanted animals were not afraid to bid because they knew the offering was one of the best ever given to the public.

The two great brood mares, Mina 31721 and Lena 40417, brought \$1,125 each, going to Jas H. Tangeman, Newton, Kans. Bosquet 40105, their great black herd stallion, went to J. H. Peak, Manhattan, Kans., for \$2,825. The average price brought by the stallions was \$568.75, which is a remarkable price considering the fact that six of these animals were under yearlings. The average price for 26 mares was \$549.61, which is also remarkable from the fact that five of them were less than a year old and one, a grade Percheron, sold for \$207.50. J. H. Tangeman, Newton, Kans., also purchased the mare, Belinda Belle 40989, for \$1,000, and Altestis 40990 for \$650.

Kansas has the most extensive potato-grower in the world. This is J. W. Groves, of Edwardsville, whose son is a graduate of the Kansas Agricultural College and whose crop in 1905 was 72,150 bushels. He is a colored man.

Kansas has more than one-half million acres in alfalfa and if she is not now the largest alfalfa-producing State in the world, she soon will be.

Kansas has the brightest, most progressive and most energetic people in the world. They are the people who do things. They are optimists, every one of them. They are always full of hope and faith and this is justified by their works. Even in the depressed condition of the cattle industry, through which we have just passed (and I believe we have passed it), her breeders have never lost faith but have continued to turn out the best.

Not many will forget the previously unknown Shorthorn bull from Kansas that stood in the short leets at the American Royal of 1904, then topped the sale and afterwards won the first prize and the championship in the great International Live Stock Show at Chicago. In spite of the depression, Kansas breeders have held on and the indications now are that they will soon have their reward in the return of prices that more nearly represent the real value of their animals.

The following figures representing pure-bred cattle sales are quoted from the Breeder's Gazette of Chicago, which has unrivaled opportunities for getting

Anthony 43066 to H. J. Ulrich, Scranton, Kans. 410.00
Fontana 43054 to A. L. Robinson, Pekin, Ill. 250.00

THE WICHITA SHORTHORN SALE.

The Shorthorn breeders' combination sale, or more exactly, the fifth annual sale of J. F. Stodder, of Burden, who was joined by S. C. Hanna, of Howard, and Marshall Bros., of Burden, was held at Wichita following the Robison horse sale. While a number of the animals offered were young stock, the average throughout was highly satisfactory. The top price of the sale was for Mr. Stodder's Scotch show cow, Ceres, which went to W. S. Combs, of Yukon, Okla., for \$675. The top price for bulls was realized in the sale of Mr. Hanna's Cruckshank bull, Symmetry, which sold for \$300 to C. W. Francis, Runnymede, Kans. C. A. Shields, of Derby, Kans., got a great bargain in the Bates-bred bull, 8th Waterloo Duke of Karney, consigned by Marshall Bros.

SUMMARIES.

J. F. Stodder's consignment:	
23 cows and heifers brought	\$2,920.00
Average	127.00
12 bulls brought	1,370.00
Average	114.16
S. C. Hanna's consignment:	
2 cows brought	320.00
Average	160.00
3 bulls brought	865.00
Average	288.34
Marshall Bros.' consignment:	
7 cows brought	590.00
Average	84.34
2 bulls brought	300.00
Average	150.00
Combined averages:	
32 cows brought	3,825.00
Average	119.40
17 bulls brought	2,535.00
Average	149.12
49 head brought	6,360.00
General average	130.00
Highest price (Ceres)	675.00

The principal buyers of Shorthorns were: J. H. Cooper, Union City, Okla.; Henry Burline, Caldwell, Kans.; S. W. Stewart, Alden, Kans.; Fred Walton, Sterling, Kans.; W. S. Combs, Yukon, Okla.; B. A. Packard, Phoenix, Ariz.; R. A. Stewart, Hutchinson, Kans.; L. J. Work, Carmen, Okla.; A. L. Barnard, Belle Plaine, Kans.; F. W. Heaton, Coats, Kans.; C. W. Askew, Utica; M. H. Lyons, Fort Reno, Okla.; M. L. Hollenbeck, Pontiac, Kans.; A. R. & J. C. Hamilton, Roswell, N. M.; J. C. Gifford, Eldorado, Kans.; C. C. Trostol, Nickerson, Kans.; W. A. Price, Anthony, Kans.; Newell Bros., Stafford, Kans.; D. H. King, Nickerson, Kans.; H. M. Hill, LaFontaine, Kans.; C. W. Francis, Runnymede, Kans.; F. E. Grimm, Runnymede; Thos. Murphy, Caldwell, Kans.; C. S. Chaffin, Preston, Kans.; C. A. Shields, Derby, Kans.

THE HEREFORD SALE.

Following the Shorthorn sale, the Hereford breeders' combination sale was held but did not hold its own in rank with the other sales. A number of the offerings were not in suitable sale condition, which had a tendency to bear the prices, more than the breeding of the animals seemed to warrant. Robt. H. Hazlett, of Eldorado, sold four young bulls at an average of \$160. The highest price of the sale was for Steele Bros.' cow, Day Dream, which sold for \$205 to B. A. Packard, of Phoenix, Ariz.

The principal buyers at the sale were: J. P. Sands & Son, Walton, Kans.; John Gosling, Kansas City, Mo.; Thos. Taylor, Belvidere, Kans.; B. A. Packard, Phoenix, Ariz.; E. H. Davis, Norwich, Kans. The foregoing list of purchasers took the entire tops of the sale.

SUMMARIES.

23 bulls brought	\$2,375.00
Average	103.26
16 cows brought	1,665.00
Average	87.70
42 head brought	4,040.00
General average	93.95

Are you thinking of buying a carriage or a buggy, or a harness? If so, be sure to write to the Elkhart Carriage and Harness Co., Elkhart, Ind., and get a catalogue. You can then select what you want with the assistance of every member of the family. This company is now in its thirty-third year of manufacturing and selling direct to the consumer. The guarantees are ample and are made by a responsible company.

A Poland-China Record-Breaker.

The Bollin & Aaron sale at Leavenworth on February 22, was another record-breaker. The 22 sows bred to Nemo's Dude, selling for more money on an average than any like bunch of sows bred to one boar, in the history of the hog business in the State.

The entire sale was good. All of the offering were bred to the boars on the above-named gentlemen's farms. No outside reputation was bought to help lift the average, it being a public sale made expressly to dispose of the product of these good breeding farms. This proves that Poland-Chinas can be bred, reared, and sold in the ordinary way at the very best prices if the breeding, merit and mating of the offering is right, and the sales advertised are conducted in an honorable legitimate way. The list follows:

No.	Price.
1. L. Calhoun, Potter, Kan.	\$100.00
2. A. G. Wyatt, Florence City, Neb.	150.00
3. L. Calhoun	155.00
4. C. S. Moore, Nortonville, Kan.	110.00
5. James Malins	57.50
6. A. P. Rearidon, McLouth, Kan.	55.00
7. A. Jones, Rosedale, Kan.	57.00
8. A. P. Rearidon	57.00
9. John Harvey, Maryville, Kan.	132.50
10. H. J. Northup, Frankfort, Kan.	120.00
11. E. H. Anderson, Kearney, Neb.	50.00

The total was \$2,700. The sows bred to Nemo's Dude averaged \$81. The entire sow offering averaged \$60. Six boar pigs averaged \$20.

Gossip About Stock.

Write Samuel Drybread for catalogue of the combination sale of cattle and hogs of the beef and lard herds at Elk City, March 17, 1906. Some excellent stock will be sold. The consignors are some of the best breeders of the locality. Address S. Drybread, Elk City, for catalogue.

Wyatt Stanley, of Anthony, Kans., has for sale three fine Percheron stallions, and if you are in need of one write him for full particulars. Mr. Stanley is one of the oldest breeders in the country, having bred Percheron horses for fifteen years at Stronghurst, Ill., before coming to Kansas.

Geo. Hebbard, of Peck, Kans., who has one of the good herds of Poland-Chinas, topped the Caldwell sale of Poland-Chinas at \$105 for the good young sow, Perfect Meddler. Mr. Hebbard has been getting good results from his advertisement, recently receiving an order for 8 head from a KANSAS FARMER reader.

L. L. Vrooman, owner of the Rose-lawn Herd of Hereford cattle and Du-roc-Jersey swine, which was established at Hope, Dickinson County, Kansas, has recently purchased a farm near Topeka and may be addressed hereafter at Route 8, Station C, Topeka, Kans. The breeding fraternity will be pleased to welcome Mr. Vrooman to the ranks of prominent breeders in Shawnee County.

The Marshall County Hereford Association will hold its annual sale at Blue Rapids, April 5. The offering consists of 27 bulls and 13 cows and heifers consigned by the following well-known breeders: Miss Lou Goodwin, A. Borek, Brown Brothers, E. R. Morgan, F. W. Preston, L. P. Larson, Geo. E. Miller, McKee Brothers, and W. A. Gilson. Mention the KANSAS FARMER and write F. W. Preston, Blue Rapids, for catalogue.

Albert King, of McPherson, Kans., is offering an attractive proposition to real-estate investors. Mr. King offers to bona fide purchasers a number of farms in Sherman County, Kansas, at from \$5 to \$15 per acre on easy terms. This land is owned by the company he represents, and when you buy it you save the expense of paying three or four real-estate men's commissions. Read his advertisement in this paper.

Hon. B. P. Waggoner, State Senator in the second district, was a heavy buyer of the best things in the Leon Calhoun Poland-China sale last week at Atchison. Mr. Waggoner is a great admirer of good stock and is equipping

his splendid farm, 5 miles southwest of Atchison, with all modern conveniences for handling stock and is stocking it with registered horses, cattle, and hogs. Having filled many positions of honor and trust we predict a bright future for him in the stock business.

The Brown County Improved Stock Breeders' Association will hold a Shorthorn sale at Hiawatha, Kans., April 5. The offering will consist of 50 head of males and females consigned by Jas. P. Lahr, Sabetha, Kans.; G. Y. Johnson, Willis, Kans.; T. J. Sands, Robinson, Kans.; Geo. Mantle, Faucett, Mo.; E. D. Schuler, Falls City, Neb.; J. F. Stricker, Highland, Kans.; and Everett Hayes, Hiawatha, Kans., who is secretary of the association. Their catalogue will soon be ready for distribution. Mention the KANSAS FARMER and write for one.

W. J. Honeyman, Madison, Kans., writes that on account of changing his farm location he is selling his herd very close, letting many go in the sale that he had expected to retain. He sells a number of daughters of Chief Perfection 2d. One is the good sow, Chief's Orphan 5th, the dam of one of the best boar pigs sold in the Kansas sales last year. Others are by Corrector 2d, Truant Boy, Chief Perfection 3d, and other great hogs, all well bred and good individuals. Nearly all are bred to U. C. Perfection. One is bred to Perfection E. H., that was first at the Iowa State Fair 1905. The boar, U. C. Perfection, is producing a lot of the kind expected from a first-prize State Fair winner. His get have been bought by the best breeders at the fall sales and are extra good sellers in the brood-sow sales being held. Mr. Honeyman is one of the good breeders who buys and breeds the good ones. Write for catalogue addressing him at Madison, Kans. Send bids to J. D. Snyder of the KANSAS FARMER.

C. S. Nevius, owner of the Glenwood Herd of Shorthorn cattle and Poland-China swine at Chiles, Miami County, Kansas, has out his catalogue for his first annual sale of Shorthorn cattle and bred Poland-China sows to be held at his farm on Tuesday, March 13, 1906. This offering of Shorthorns includes his entire 1905 show herd of ten head, and the offering as a whole comprises as much fashionably bred and prize-winning Shorthorn blood as was ever offered by any breeder in the State. The sale will be held on Mr. Nevius' farm, where most of the cattle were bred and cared for. Buyers can "see the whole works"—an advantage worth considering. Other notices will go into the detail. To better follow it, please get a catalogue. Mention the KANSAS FARMER in writing Mr. Nevius. Those who like a big, stretchy Poland-China will be interested in the hog sale the forenoon of the same day (March 13). The sows will be sired to Designer, the best finished son of Expansion the writer has ever seen. Ask for separate catalogue for the hogs.

L. M. Monsees & Sons, Smithton, Mo., are selling one of the greatest lots of jacks and jennets in their 28th annual sale at Limestone Valley Farm that was ever offered at public sale. It has been said by one who knows the stock, "Don't come to the sale unless you want to buy good jacks and jennets, because if you do you will be disappointed, as nothing but good ones will be sold." They are all good, although some are better than others; but all are of that high degree of quality that has made the herd so famous. Don't fail to be on hand early the sixth, or better the day before. Messrs. Monsees leave no stone unturned to make this annual event pleasant and profitable for their guests. The stock sold by them that day is of the kind that will produce profits that will help make the future days more pleasant. It is a little late to get a catalogue but it is not necessary, as the breeding is right and the individual merit of the offering is of the same quality as the bunch that made the greatest of all prize-winning records at the great St. Louis World's Fair. Remember the place, Smithton, six miles east of Sedalia, Mo., the time, March 6, 10 a. m., 1906.

J. R. Young's On and On sale of brood sows March 7, is to be the meeting place of the East and the West, the North and the South—all in friendly competition for the best bunch of sows, breeding and individual merit considered, and bred to the greatest of all the recent champion sons of the lamented Keep On, and the old champion, Successor, that were ever offered in one sale. Mr. Young has spared no time or expense in getting this great offering together. The sows are of the cream of the greatest sales of the year, selected by the fieldman and auctioneers representing Mr. Young, bought without limit as to price but with the admonition to be sure of the breeding and individual merit, and are beyond criticism. To realize how well their policy has succeeded this offering must be seen, as word of tongue or pen can not portray the offering as it would appear on inspection. Be sure to arrange to attend, or if it is an utter impossibility to be Mr. Young's guest that day, either follow his example and instruct your representative to buy what you want without limit, or be sure to place the limit high enough to get what you want. The experience of this year proves that the man who has an On and On litter will be assured a good sago next fall. Richards, Mo., the place; March 7, the time; J. R. Young, the host. Be there.

Zenoleum Veterinary Adviser. A copy of this interesting and well-printed book containing sixty-four pages of valuable advice, prepared by the leading veterinarians in the world for live-stock owners, and printed at a great expense by the Zenner Disinfectant Company of Detroit, Michigan, will be sent to you and to your friends, upon request, absolutely free of all cost.

If you want a copy of this book, send your name and address to the Zenner Disinfectant Company, 61 Bates Street, Detroit, Michigan, at once. Do not wait a minute. Do it now.

THE DIFFERENCE BETWEEN A GOOD ROOF
& OTHERS IS
Amatite

Can a durable satisfactory Ready Roofing be made at a low price? We say yes, and offer you Amatite.

Low price in most things means poor quality—unless there is some special circumstance—and in the case of Amatite there are special circumstances that enable you to get the very best Ready Roofing at the lowest price.

Years of experience have taught us that there is only one way to make a roofing that is both cheap and durable. That is by using coal tar pitch as the waterproofing agent in combination with wool felt. Pitch is the lowest priced material known that is adapted for protection against water. That it is the most durable, is proved by tests of thirty years in actual use. If pitch is used, it is really possible to secure a cheap, durable, ready roofing. There are other materials besides pitch that will make a satisfactory roofing, but they all cost very much more. None of them is as good as pitch, for pitch is ideal. Water is absolutely ineffective against it, both chemically and physically.

We are the largest manufacturers of coal tar pitch in the world.

Our many years of experience enable us to make a ready roofing out of pitch, and this is something that only this

company is equipped to do to advantage.

So we can offer Amatite Roofing—made of pitch and wool felt in a practical form at so low a price.

To obtain its equal you must pay at least twice as much.

Compare its cost at your dealers, weight for weight—for that is what counts—with the cost of its rivals.

Roughly speaking, a roll of Amatite equals in weight (and durability) the three-ply or four-ply grade of any roofing which is not made of pitch. But its price is usually less than half.

Don't be deceived into thinking that Amatite can't be lasting because its price is on a par with flimsy, lightweight roofings.

Amatite would sell on its merits at double its price. We prefer to keep to a normal profit and to make big sales.

You, Mr. Purchaser, get the benefit!

We should like to send you a free sample, just to show what a solid, practical, weather resisting roofing you get when you buy Amatite.

A postal card will do. Address the Barrett Manufacturing Company, New York, Chicago, Cleveland, Boston, Allegheny, St. Louis, Minneapolis, Philadelphia, New Orleans, Kansas City.

BLACKLEGOIDS

THE SIMPLEST, SAFEST, SUREST AND QUICKEST WAY TO VACCINATE CATTLE AGAINST BLACKLEG.

Nodose to measure. No string to rot. Just a little pill to be placed under the skin by a single thrust of the instrument.

An Injector Free with a Purchase of 100 Vaccinations. For Sale by All Druggists. Literature Free—Write for it.

Buy Fence Direct from Factory

It is the most satisfactory and most economical method of buying. Most economical because, in buying direct, you cut out all unnecessary handling and all profits of go-betweens. This makes quite a saving.

Most satisfactory because you have so much larger a line to select from. We make 26 styles and heights of fence besides gates and stretchers.

The Continuous Stay gives Advance Fence its superior strength. It preserves and utilizes all the strength of the wire, about half of which is wasted in fences with cut stays.

30 Days Free Trial. If after receiving our fence you do not like it and it is not exactly as represented in every way you can return it to us at our expense and your money will be refunded.

We prepay freight to any steam R. R. station in the U. S. on 40 rods or more and guarantee safe delivery.

Write today for our Free Fence Book and wholesale delivered prices.

Advance Fence Co., 3771 Old Street, Peoria, Ill.

TOPEKA BUSINESS COLLEGE, Topeka, Kans.

The Veterinarian

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of the Kansas Farmer. Kindly give the age, color, and sex of the animal, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should give the Inquirer's postoffice, should be signed with full name and should be addressed to the Veterinary Department of the Kansas Farmer, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter answered in the Kansas Farmer, an immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across top of letter: "To be answered in Kansas Farmer."

"Blind Staggers."—We have a disease among our horses that we do not understand; they first go blind and seem crazy, and run over anything in their way. Some die within an hour, some live for twenty-four hours; only one got well. They are dying all over the country; the horse that is getting well was bled in the neck and given linseed oil and turpentine. What is the disease and cause? H. P. C.

Palco, Kans.

Answer.—Under separate cover we have sent you a bulletin regarding the trouble to which you refer. The bulletin is too long to copy in this column.

Diseased Tooth.—My 4-year-old sorrel mare has a yellow, offensive-smelling discharge from left nostril for the last eight or ten days. She eats well and seems all right other ways. There is no swelling about the head. I thought it might be from a diseased molar, but from the way she eats hard corn it can hardly be that. She had several attacks of distemper last summer, and an abscess may have formed. No treatment has been given. What can I do for her? X. X.

Answer.—From the nature of the discharge I would judge that it came from a diseased tooth and would recommend having a competent veterinarian examine the animal and locate the affected tooth, as the pus has probably collected in one of the cavities in the head and then discharged into the nose.

Barbed-Wire Cut.—I have a horse that was cut on barbed wire just below the fetlock, last July. It healed pretty well but the flesh grows in a ridge along the cut, and runs some—also causes a liquid with a bad odor to cover the surface under the fetlock. I have used lunar caustic on the proud flesh, washed with carbolic-acid water and then applied air-slaked lime. It does not heal fully. What would you advise? H. L. M.

Eldorado, Kans.

Answer.—I would advise your cutting the proud flesh out of the wound and then searing with a hot iron; then heal the wound with any of the astringent powders that you may find at a drug store. If none are available, have the following prescription filled and use it: Two ounces of iodiform, 1 ounce of boracic acid, 1 ounce of acetanilid, 1 ounce of tannic acid and 2 ounces of pulverized starch; mix and dust on the wound daily.

"Blind Staggers."—Will you kindly send me press bulletin in regard to blind staggers? Nearly every one in this neighborhood has lost horses with this so-called disease and I would like to learn something about the cause and cure. F. B. S.

Stafford, Kans.

Answer.—We have mailed you the press bulletin you desire.

Ring-Bone.—My coming 3-year-old bay filly has an incipient ring-bone on left hind leg just above hoof; she is not lame but the enlargement shows quite perceptibly. A neighbor suggests that she may outgrow it. What do you think? S. T. H.

Pleasanton, Kans.

Answer.—I would suggest that you secure from your drug store a fly blister, say 4 ounces, and blister the ring-bone every three weeks until you have given four applications. Allow the blister to act about 48 hours then wash off and grease. While the blister is acting keep the animal's head tied short enough that she can not reach the foot.

Lame Mule.—I have a coming 4-year-old mule that is subject to lameness in right front foot or leg. I can not tell which. He will get lame suddenly and be lame for from three to five days and then get all right, and probably be so for two or three months, then become suddenly and violently lame again. I can find no blemish or swelling or anything that looks as though it would cause lameness. Sometimes I see him in the pasture resting

his right front foot with tip of hoof on ground; he has been this way for 15 or 18 months.

W. C. C.

Cheney, Kans.

Answer.—The symptoms you give of the animal resting the toe would suggest the lameness being located in the back of the foot, the change in position being made to relieve the pressure from the tendon. You had better have some one who can give the animal a thorough test examine carefully those parts to locate the exact seat of the trouble.

Lice.—We have a cow that is bothered with lice; I never saw any like them. They bury their heads in the skin, and resemble a tick in shape. I have tried several remedies for their removal but have failed. Can you give me a good remedy? C. E. J.

Omaha, Neb.

Answer.—We have sent you under separate cover a press bulletin on the preparation and use of lime-and-sulfur dip which we trust you can use with favorable results. The bulletin is too lengthy to publish in this column, and will be sent to any one having similar trouble in their stock.

Bunch at Hock Joint.—My 3-year-old colt, weight 1,200 pounds, has a soft bunch at hock joint, the size of a walnut; it is on the outside and can be pushed through in front; is there anything I can do for him? He has been worked some, but has never been lame.

Shaw, Kans.

S. L.

Answer.—A liniment containing considerable tincture of iodine rubbed thoroughly into the enlargement will be beneficial in removing it; such as 4 ounces of tincture of iodine, 2 ounces of capsicum tincture, and arnica tincture, 2 ounces; mix and apply to affected part daily.

Lameness.—My 2-year-old bay filly received a hurt while in pasture last summer. She was very lame in left hind leg, and we noticed a small running sore on the round of stifle next to flank; there was some swelling around the joint and she was very lame for two weeks, then the sore healed and swelling went down, and apparently she was all right; but in the course of a month it was noticed that she was a little lame; she stands with her foot turned back, and has grown worse the last month; we had to help her up yesterday. The sorest spot seems to be below the stifle joint. We have bathed it with Gumbault's Caustic Balsam.

I have a black mare that is always rubbing and scratching while in stable or in the lot. I can find no lice on her, but there is a scab or scurf in the hair next to the skin. She is falling off some in flesh.

N. J. G.

Langdon, Kans.

Answer.—The running sore from the stifle has evidently come from an opening into the joint. You had better use an astringent powder on the running sore, which can be obtained from any drug store, by having put together 1 ounce of tannic acid, 1 ounce of boracic acid, and 2 drams of powdered alum.

Ailing Pigs.—I would like to know the cause of the death of two pigs which I lost this week. They heaved as though they had thumps, and would fall over and apparently have fits. After death they frothed and bled at the mouth. They were about 4 months old and in good condition and ate well until the day before they died. I have two more affected with the same trouble.

J. G.

Ottawa, Kans.

Answer.—Pigs that are badly affected with worms, until the entire intestine is filled, give the symptoms you describe. Better examine the ones affected and put them out of their misery. If worms are the trouble, preventive treatment should be followed. Will send you a prescription (bulletin) by mail which the Government has been using very successfully and I think will help keep the hogs in good condition.

Scours in Shoats.—Some of my shoats have scours. I had them on sowed rye, and fed shorts slop and corn. I thought it might be the rye that caused the trouble so turned them off, and have fed nothing but corn for several days, and to-day find another with the complaint. After being affected a few days, they get thin and weak and do not eat much. I should like to know the trouble and what to give them.

Ottawa County, Kans. J. C. S.

Answer.—Would advise your discontinuing the corn entirely for the affected pigs, and give listerine in doses of a tablespoonful every three hours in half a pint of milk, to each hundred pound hog. Would advise feeding the rest of the hogs rather carefully on corn. A little bran fed to hogs when they have bowel trouble is often ad-

vantageous in remedying such conditions.

Fistula.—I have a mare that has had fistula for two years. She has been treated with different medicines, has a running sore on withers high up back of where the collar works, and a cavity between the shoulder blades. She has not been worked for 9 months; is 8 years old. I would like a remedy, also your bulletin.

W. T.

Wichita, Kans.

Answer.—We are sending the bulletin you desire on fistulous withers. You should open the abscess freely so as to get good drainage, and then follow directions in bulletin until it is healed. If you find that the tincture of iodine is causing too much irritation after using it for a couple of weeks, then resort to the use of tincture of calendula, a teaspoonful to a pint of water. Let us hear from you again if you have difficulty in treating this fistula.

Thin Stallion, and Blood Wart on Colt.—I have a colt that has a blood water on left side of body about size of a hen egg: what can I do to cure it?

I also have a 3-year-old stallion and I can't get him fat; he is in fair condition; what must I feed him to get him fat to sell in the spring?

Larned, Kans.

X. X.

Answer.—Burn the wart off with a hot iron and then heal up with some common disinfectant.

Give the stallion a condition powder. If none are available, have the following filled: 1 ounce of pulv. nux vomica, 2 ounces pulv. gentian, 6 ounces pulv. glycyrrhiza root, 4 ounces of common salt and mix with 10 pounds of oil-meal.

Ringbone.—My 10-year-old mare has had ringbone for perhaps 18 months. When taken from the barn mornings she goes lame at first. Can it be cured, and will it stay cured? I would like to cure it before spring work begins. I have not treated it.

G. B.

Holton, Kans.

Answer.—A fly blister applied to your mare's ringbone every three weeks until you have given about four applications will doubtless be beneficial in removing the lameness. The animal's head should be tied rather short while the blister is acting, as otherwise she is liable to get her mouth blistered in biting at the parts that are irritated. We are sending under separate cover a press bulletin on ringbone issued by the veterinary department of the Experiment Station at Manhattan.

Worms in Horses.—Will you inform me of some reliable remedy for worms in horses? Also full directions for us.

C. S. B.

Mt. Hope, Kans.

Answer.—The following prescription will be beneficial in removing worms: 1 ounce of pulverized nux vomica, 2 ounces of pulverized iron sulfate, 6 ounces of pulverized glycyrrhiza root, 4 ounces of common salt, 6 ounces of sulfur. Mix together and put in 5 pounds of oil-meal. A heaping teaspoonful twice a day in ground feed will be the proper dose of this mixture.

Lame Horses.—I have a 3-year-old mare that is lame in or above pastern joint or fetlock; it is swelled and sore to the touch; she hops around and when standing uses her toe; she is getting thin; she was the same way last summer; we used all sorts of liniments, and after three months she got well. She has not been in harness.

A 10-year-old road-horse got hurt last November just above the large pastern; it is swollen and hot. He limps some, and rests the leg when standing.

Should the chill be taken off the water for a horse with distemper?

Is there any cure for a horse whose pastern joint seems to push over the under part? It seems that the joint is too weak to keep it in place so the upper part of the joint pushes forward over.

H. B.

McPherson, Kans.

Answer.—I would advise using a liniment on the first horse that will not blister, such as spirits of camphor 4 ounces; tincture of belladonna 4 ounces; fluid extract of poke root 3 ounces; compound soap liniment 8 ounces. Rub on affected part twice daily.

The same liniment is also proper to use on the 10-year-old road-horse.

The chill should be taken off the water for a horse that has distemper; if the horse will eat bran mashes, it should have a hot bran mash at least once a day.

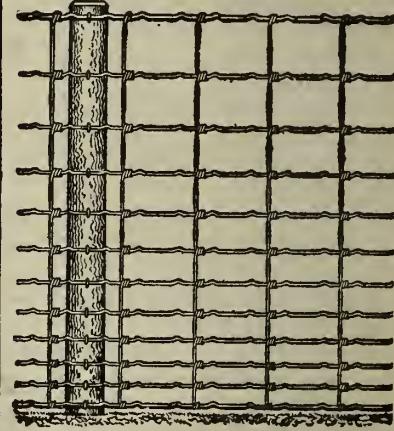

In regard to the horse with weak pastern, would advise considerable rubbing with a stimulating liniment—4 ounces of turpentine to 6 ounces of linseed oil with 2 ounces of tincture of cantharides. Shake well together and rub daily on the joint, with considerable friction.

C. L. BARNES.

American Fence Talks

American fence is a structure of hard, stiff steel wires, possessing great strength and flexibility, adjustable to uneven ground, sound, durable and guaranteed. Great improvements are continually being made over the fences of years ago. See the modern, up-to-date American fence, built of big lateral wires, with heavy upright or stay wires hinged—the most perfect structure for a square mesh fence.

The thirty plants of the American Steel & Wire Co. make every known grade of wire, from the stiffest wire for pianos to a wire almost as soft as silk for weaving into wire cloth. With these enormous facilities for manufacture and observation of the action of wire in all kinds of service, not only is the best wire made for the use required of it, but for less money.

It is Steel that makes possible the great modern structures like bridges, skyscrapers, locomotives and steamships that people confidently trust. Steel for wire is specially made and becomes stronger and more durable by drawing into wire and annealing. And when thoroughly galvanized by lately improved processes and woven into American fence, makes the most substantial structure about a farm. Properly put up and treated, it is a permanent and money-making investment for many years.

We sell through dealers all over the country. In this way, the buyers' interests are best looked after. Dealer then becomes your business friend and he will see that you are treated right. See him, examine different styles get catalogue and make selection to suit your requirements. Or, write us direct and we will send catalogue and tell you where you can get the fence.

NOT EXPENSIVE—Prices range from about 17 cents a rod up, according to height, style and location of your place.

American Steel & Wire Co.

Denver
San Francisco

MACHINE OIL

\$3.50 A BARREL

You will find it a better machine oil than anything you have been buying for 35 cents to 45 cents per gallon. Premium Oil is a natural oil, greenish black in color. There is no made oil that is superior to Premium Oil for engines, shafting, shops, elevators, threshing machines and farm machinery. It will not GUM, has good body, is not affected by hot and cold weather as most oils are. If a farmer, you say you won't need as much as a barrel. Get your neighbor to take half of it. But remember \$3.50 for a 50-gallon barrel, and the empty barrel is worth at least one dollar; gives you oil at less than 6 cents per gallon at your railroad station. If within 300 miles in Kansas freight will not be over 75 cents per barrel. Sample sent on request.

T. C. DAVIS, Benedict, Kans.

Benedict, Kans., August 26, 1905.
I have this day sold my interest in K. C. Dailey & Co. to T. C. Davis, who will hereafter conduct the business in his name. Signed, K. C. DAILEY.

High Grade Paints at Reasonable Prices

We use good mineral and pure linseed oil. We are also distributors for Wing's Fire Proof Oil Paints. Write for descriptions and prices.

Kansas Binder Twine.

EDITOR KANSAS FARMER:—At the last session of the Kansas State Grange, held at Madison, Kansas, December 12, 13 and 14, 1905, a resolution was passed advising that I act as a committee to go to Lansing at my earliest convenience and investigate the twine plant at the penitentiary (as there had been so much complaint, either imaginary or real, as to the quality of this twine) and to learn if possible whether this complaint came from the farmers who had used the twine or originated from the twine trust, or from the implement dealers on purpose to injure the sale of the penitentiary twine.

On February 7, 1906, armed with a letter of authority and recommendation from the master and secretary, approved by the executive committee of the Kansas State Grange, I proceeded on my mission, and met the warden, W. H. Haskell, in his office. He was very busy, as the State board was then in session. I handed him my letter from the secretary of the State Grange, and after reading the same, he introduced me to each member of the State Board; after which his chief clerk, J. C. Brown, showed me through and explained to me in detail the workings of the plant in its entirety. First he showed me a room where they had in store 1,000,000 pounds of manufactured twine ready for shipment, and 1,000,000 pounds more of raw sisal in the hale ready to be passed through their many looms and vast machinery to get it ready to be spun into a strictly fancy article of binder twine. It was quite interesting to me to note the starting of the crude sisal from the bale into the first machine and from that to the second and so on, through a score of powerful looms until it was thinned down to the proper texture, strength and firmness in order to get it spun into an even grade of twine, after which it was passed over in baskets to the other side and there reeled into balls, then pressed and weighed, and the balls assorted until ten halls were found that weighed the exact 50 pounds. Then it was passed to the sacker ready to be stored away for shipments on orders. The superintendent made this statement: They had finally overcome all obstacles and impediments that used to annoy them and are now turning out every working day an average of 711,600 pounds of No. 1, pure sisal twine, as good an article as is sold in the State, for they use no shoddy. Now, with the meager appropriation of only \$150,000 per annum, they expect to turn out nearly four million pounds of No. 1 twine, equally as good as the trusts' so-called manila twine, at a less cost to the consumers, and the quality is fully guaranteed.

And now, farmers of Kansas, this twine plant belongs to you and the benefit you derive from its operation depends wholly upon the liberal patronage you give it. This twine plant, with a more liberal patronage and State appropriation, has a capacity sufficient to supply every farmer in the State with all the twine needed to bind his entire crop; so why not lay aside? This twine is not made under the contract system. It being a product of the State of Kansas, we should help it along by buying twine manufactured in our own State. If we can not get a reasonable profit, let the farmers of a neighborhood club together and send their orders direct to J. C. Brown, the gentlemanly superintendent of the plant who keeps a record of every transaction, the date of order received, by whom, and a detail of ship-

ments out so it can be referred to at any time; and your order for 500 pounds, or a car load, provided the cash or draft accompanies the order.

Every subordinate grange can have its secretary send in orders if dealers will not handle it for them. In conclusion let me say that as a representative of the grange, a farmers' organization, I was treated very nicely by all the officials. They did all in their power to make my call a pleasant one and I hope that our people and the farmers generally will assist by their patronage and support in making this Kansas product a success.

A. P. REARDON.

New Lancaster Grange No. 223, Miami County.

New Lancaster Grange gave a public installation at their January meeting, closing with one of the famous grange feasts. This was our first attempt in this direction and it proved a great success. Past Master Elkington acted as installing officer and the beautiful ceremony was rendered without a hitch. A full corps of officers were installed for 1906, and our prospects for the future are bright. J. J. Clark was elected Master, F. B. Conner, Lecturer, and W. H. Grant, secretary. After the ceremony an excellent feast was served which in itself spoke well for the culinary art and cultivated taste of the sisters. At a late hour all went to their homes feeling that our first attempt in a social way was a success.

Brother J. R. Lemen, one of the delegates from Miami County to the State Grange at Madison, Kansas, and the writer were invited to visit Miami Central Grange located in Miami County. We accepted the invitation and visited with it on the evening of January 26. There was a large number in attendance and we were given a cordial welcome. Brother Lemen gave a very interesting account of his trip and the proceedings of the Kansas State Grange held at Madison, Kansas, in December. Short addresses were made by a number of the home members. Brother Lemen also communicated the annual ward after which the good sisters served an excellent supper. A member stated to me that we were the first visitors that ever attended their grange, and the fact that this visit worked great good to that grange, reminds us that there is not enough visiting done by the neighboring granges.

This grange is over two years old, has fifty members, and is contemplating building a new hall at once. It has a good territory, and we predict for it a great future.

I want to call attention of cooperative circles in the State to the remarkable showing made by Brother J. R. Lemen, manager of the cooperative store at New Lancaster, in the last twenty months. On a paid-up capital of \$2,000, he showed a net profit of over \$700. Mr. Lemen was a student of Ed Blair, formerly of Chillicothe, Kansas.

This grange is taking steps to introduce a bureau of information, whereby

Cheap Rate to California.

Californians raise gold—they don't mine much now. An easier way has been found than that! It is now obtained by farming. The alchemy of nature converts the oranges, lemons, olives, grapes, wheat, alfalfa and other products of the soil into good clothes, comfortable residences, and assuring bank accounts. 'Tis being done every day in California. Wouldn't it pay you to inquire into this? Better yet, why not go there?

Only \$25.00

From Topeka to almost all points in California and to many places in Arizona. Liberal stop-over privileges.

On sale daily, February 15 to April 7, 1906. Tourist sleepers daily on fast trains. Harvey meals.

For particulars, apply to

Topeka, Kansas.

members may list articles they may have to sell, such as grain, stock, poultry, implements, etc. We believe it will help to further the principles of cooperation.

T. B. CONNOR,
Lecturer.

Grange Department of the KANSAS FARMER, asking in the name of Vinland Grange that you give this matter some of your valuable space.

CARL LINDSTROM,
Secretary.

Removal of Tax on Domestic Alcohol Made Unfit for Use As a Beverage.

EDITOR OF THE GRANGE DEPARTMENT:—Vineland Grange No. 163 has taken favorable action on the petition for the removal of the internal revenue tax on domestic alcohol, and desires the local press to take the matter into consideration and, if possible, is urgently requested to give this matter its editorial support, calling that by the support of the press, this matter will come before the people, and, if thoroughly discussed, will give the public a better understanding of the question, and will also be of much help to our members of Congress in their efforts to have this tax removed.

It is no longer a theory, but a fact, that alcohol is a great fuel, or a great saver of fuel in foreign countries, and can as well be applied in our home land. It has not only proven itself a saving in fuel, but it is also a channel through which the farmers with damaged grain can find a market thus making it profitable to the farmers directly, and to the whole country indirectly. There are hundreds of other uses for domestic alcohol which are retarded in this country on account of the high revenue. The principle one is its use for heating our homes. Gas, at the present time, is very satisfactory, but in alcohol we do not find the fumes which gas produces, and do not run the risk of explosion.

For the purpose of bringing this matter before the public, I send this to the

RESOLUTIONS FOR THE GUIDANCE OF MONA AND OTHER SUBORDINATE GRANGES.

Resolved: That we indorse the action of the National and State Granges at their recent annual conventions in unanimously adopting resolutions favoring the removal of the internal revenue tax from domestic alcohol, made unfit for use as a beverage, and,

Resolved, That the master and secretary are hereby instructed to sign the petition approved by the National Legislative Committee to affix the seal of the Grange, and send it with a copy of these resolutions, and of those passed by the National Grange, to our representative in Congress, in order that he may be informed of our desire for the immediate enactment of the legislation necessary to accomplish the purpose of these resolutions, and of our further desire that he should at once use his influence to that end, and,

Resolved, That copies of these resolutions be sent by the secretary, to the local press with the request that they give their editorial support to the movement and open their columns to the work of educating the public as to its importance.

No Snub Intended, Either.

"Do you have mails in this church?" asked the High Church visitor of the verger of the village church. "No, indeed," replied that dignitary with scorn. "We have oil cloth, and right up to the chancel, too!"—Wisconsin Church Life.

JOYS OF THE COUNTRY.

I would from the city's rule and law,
Its fashions and forms cut loose,
And go where the strawberry grows on
its straw.

And the gooseberry grows on its
goose;
Where the catnip tree is climbed by the
cat,

As she reaches for her prey,
The guileless and unsuspecting rat
On the rattan bush at play;
Where the cow on the fragrant cowslip
feeds

Where the dew on her dewlap lies,
And the dog to the waving dogwood
speeds.
And the bull to the bullrush flies.

—Exchange.

*Educated Motherhood.

FLORENCE SHAW KELLOGG.

IN TWO PARTS—PART II.

The wise mother studies each child as the horticulturist studies a new flower, and her education comes little by little to meet its need. There is scarcely anything of which she does not need some knowledge. She should strive earnestly to keep herself abreast of the times, that, as her child grows older, she may give him intelligent guidance and companionship. She should be able to sympathize with him in all his ambitions and have earnest part in all his life. She needs some understanding of chemistry and physiology to know what foods are best to build up a strong, healthy body; of botany and zoology to help him rightly appreciate the beautiful world in which he lives, the great work-shop of God (which thought so impressed Agassiz that he would never allow any levity among his students in his summer school on Penobscot Island, but required them to bring the same reverent spirit there, as investigators of God's way in nature, as to church); of mathematics that she may help him in his reasoning and in the solving of the many problems that can be demonstrated by "line and rule;" of literature that she may direct his reading and help him to find the beautiful treasures in song and story, and become familiar with the great minds of all ages, finding in them a comradeship most helpful, a solace for his weary hours, cheer and encouragement for his dark ones, and a spiritual and mental wealth of untold preciousness and worth; of history that she may help him to an understanding of the way by which we have come, and through what cost of life and treasure his home is assured to him. And thus I might go on through the whole list, giving to each subject its due meed of praise, for all are good and helpful to us in our work as mothers; and yet I can not say they are indispensable, for many a good mother, untaught of schools, ignorant of books, has proved them otherwise.

THE MOTHER INSTINCT.

While we fully acknowledge our need here, and the broadening, deepening influence of true education we must admit that there is, for the mother, a something more—a something better and more imperative even than this, a sweet motherliness—an intuitive understanding of the child and its needs that education may help wisely to direct, but can not supply if it be lacking. It is something hard to define or name, a God-given instinct, an enrichment of the soul, an education of the heart that must be, whatever else be missed. Having this, the mother safely guides her little flock over the shoals and quicksands into the safe harbors of true manhood and beautiful womanhood.

The mothers of many of our great men and women have been uneducated, as the world regards it, and yet how grandly they did their work! How deeply, how enduringly they impressed themselves upon the minds and hearts of those for whom they lived and worked! Take the mother and step-mother of Abraham Lincoln, with what would now be considered scarcely more than the rudiments of an education, yet what a work they did in that noble soul! How deep and lasting, how potent for all things high and holy was their influence. They were God-taught mothers—mothers who looked within and learned of the sacred things hid in their hearts, as in the hearts of all good women and men. It is motherhood personified, that wealth of love

*This is a continuation of an article which was begun last week and should have read, "Educated Motherhood—Florence Shaw Kellogg." In two parts, Part I.

and brooding tenderness, that protecting care that awakens in the heart of the true woman with the first cry of her child, and grows ever stronger, deeper and more holy as life goes on. It is God's own education, gained only in His school, taught from the holy depths of His Fatherhood. "Like as a father pitith his children" so the great heart of the Father-God yearns over and teaches us each one.

THE MINISTRY OF CHILDREN.

A vital part of the mother's education comes from the children themselves. No one can give herself up in loving care and ministry to them without receiving from them far more than she gives. Holland wrote, "I feel how wonderful to me has been the ministry of my children, how much more I have learned from them than they have ever learned from me; how, by holding my own strong life in sweet subordination to their helplessness, they have taught me patience, self-sacrifice, self-control, truthfulness, faith, simplicity and purity. Ah! this taking to one's arms a little group of souls, fresh from the hand of God, and living with them in loving companionship through all their stainless years is, or ought to be, like living in heaven, for of such is the heavenly Kingdom."

Education gained from schools and text-books we may have—we should have if possible—for the more we are ourselves developed and trained, the better are we fitted to train our children; the more clearly we see the wonderful way of God in life and nature, and can better awaken thought and feeling in them. But education of this other kind we must have. We must understand that

"Artists of the Soul are we
Moulding life and destiny;
Workers at a task sublime
Which defies the touch of time,"

fitted for the high work entrusted to us. The mother, more than any other, moulds the character of her child. It is her work to frame and develop, to evolve all that is good and pure, while she represses and eliminates all that is not good. She builds not for to-day alone, but for all the days to come.

THE HOME THE WORKSHOP.

Our homes are our workshops in which we build most beautiful structures. It is there that we learn the value of a simple, true, honest life; there that our children learn to know themselves and to understand the relation of each to each; there that they find that nothing is small or insignificant, nothing that may not weave into the web of life and help it to be beautiful. There, as Francis Bacon said, they see how "God hangs the greatest weights upon the smallest wires," and learn that each wire must be strong and trustworthy, ready in its place to fulfill the work assigned to it. In the home Love takes them by the hand and leads them out of self and into service, while they learn over and over again with each new day, "that the glory of life is to love, not to be loved; to give, not to get; to serve, not to be served;" and all the fair flowers of life grow and blossom there.

I read a fine thing in a recent number of "American Motherhood" that I am tempted to copy here:

"HOME LIFE A SYMPHONY."

"A young Swedish musician, ill and poor, was received as a guest in an American home. From her easy chair she watched the household life around her and saw that 'Mother was the center of everything.' One day when she and the mother were alone together she said, 'I have been thinking of you much, very much, to see if I can tell what you are. I know now; this family is a great symphony and you are its theme. Every one sings to you. Without you would be no harmony at all, only discords, but you hold it all together. No matter what is sung, I hear that same sweet theme through it all, now high, now low, now soft, now loud, but ever there. You sing with us all, not only your own, but with me, the poor stranger. It is a beautiful theme. I love it.' Is this not a beautiful and poetic tribute to the true mother and home, telling as it does, how surely the sweetness of the theme, the atmosphere of the love-hued home is felt, 'even by the stranger within its gates,' and how much more surely and helpfully by the sensitive little children gathered there? Life in each home should be a 'symphony' with mother and the love she personifies the theme,

Lowell Ingrain Carpet

WHY YOU SHOULD BUY IT

Because: It has been recognized for seventy-five years as the best INGRAIN manufactured—**ALL WOOL.**

Because: The goods are wound on a hollow stick which constitutes a trade-mark and guarantees that you are getting a **LOWELL INGRAIN.**

Because: Styles and colorings are up to date, in plain shades and figured patterns; closely resembling high-grade carpeting.

Because: **LOWELL INGRAINS** are so woven that they can be used on both sides: a feature decidedly advantageous. No one doubts the wisdom of covering a room entirely in a rural home, making it warmer and easier taken care of.

Ask your local dealer for a **LOWELL INGRAIN** when looking for a new carpet. Look for the hollow stick and be satisfied with none other than a **LOWELL INGRAIN.**

Manufactured by BIGELOW CARPET CO., New York

leading in a natural, healthful way to the divine life and love and the home, 'not built with hands, eternal in the heavens.' Oh, mothers, know you not that 'Motherhood is priced of God, at a price no man may dare to lessen or misunderstand?"

Know you not that there should be,

"Many windows in her soul
That all the glory of the universe
May beautify it? Not the narrow pane
Of one poor creed can catch the radiant
rays

That shine from countless sources. Tear
away

The blinds of superstition, let the light
Pour through fair windows, broad as
truth itself

And light as heaven. Turn your ear
To all the wordless music of the stars,
And to the voice of nature, and your
heart

Shall turn to truth and goodness as
Turns to the sun. A thousand unseen
hands

Reach down to help you to their peace-
crowned heights

And all the forces of the firmament
Shall fortify your strength. Be not
afraid

To thrust aside half truths and grasp
the whole."

as God shall give it to you day by day
as you walk with him down "the long
pathway of thought" and receive your
education fresh from his great heart.
Learn of books all that is given you to
learn for this is good; but most and
best of all learn of life, learn of na-
ture, learn of God, for this is indis-
pensable, this is eternal, and "fadeth
not away."

Tested Recipes.

French Cream Cake.—One cup sugar,
3 eggs, beaten with sugar thoroughly,
1½ cups flour, 2 tablespoonfuls baking-
powder (mix with flour dry); 3 table-
spoonfuls water. Bake in two tin pie-
pans. When done turn out on molding-
board, split with sharp knife and
spread with cream.

Cream.—One scant pint sweet milk
heated to near boiling. Add two small
tablespoonfuls corn-starch, wet with a
little cold milk; two eggs beaten with
1 cup sugar, juice and grated peel of
one lemon. Spread with frosting if de-
sired.—Mrs. K. J. McCracken.

Soft Ginger Cake.—Stir to a cream 1
cupful of butter and ½ cupful of brown
sugar. Add to this 2 cupfuls of cook-
ing molasses, 1 cupful of sour milk, 1
tablespoonful of ginger, 1 teaspoonful
of cinnamon, 3 eggs, teaspoonful of
soda, 4 teacupfuls of flour. Divide the
mixture in two pans and bake in slow
oven from 4 to 60 minutes.—Mrs. Clarke
of Sabean Club.

Lazy Doughnut.—One cup sugar, 1
cup sour milk, 2 eggs, 2 tablespoons
melted lard, ½ teaspoon soda; spice if
liked. Stir stiff as you can with a
spoon; roll, cut and fry.—Mrs. Mary
Buckman, Sabean Club.

Pumpkin Pie.—One cup stewed
pumpkin, 1 cup sweet milk, ½ cup su-
gar, 2 eggs, 1 heaping teaspoon corn-
starch, flavor with nutmeg.—Mrs. F. W.
Ross, Alden.

Custard Pie.—Three eggs well beat-
en, ½ cup sugar, 1 pint sweet milk, 1
teaspoon cornstarch, flavor to suit
taste.—Mrs. F. W. Ross, Alden.

Apple Honey.—Select firm apples,
peel and grind through a sausage mill;
to 1 quart of apples after they are
ground, add 1 quart of sugar and 1
quart of water, and cook till thick
enough.—Mrs. F. W. Ross, Alden.

ishly. A flying detachment of automobiles, touring cars and runabouts formed the first part of the parade seen by the watchers along the route, who had been waiting for more than an hour after the scheduled time. Their appearance was the signal for applause which continued almost without a break until the last straggling burro at the end of the procession had passed.

The queen of the tournament, with her twenty-four maids of honor, rode on a royal barge, a low automobile truck with rows of seats running across from wheel to wheel, rising in tiers toward the rear. This barge was shell-shaped and made more massive in its general effect by a dense covering of greenery. The ground work was of pepper boughs, covered with a lighter coat of smilax and embellished with marguerites. Heliotrope and violets were used in the trimming and for lining the interior of the shell.

The Garfield School offering was a float representing the Pasadena Tournament of Roses. On the platform, that was in itself a miniature garden, were all of the girls in the eighth grade of this school. These girls occupied practically all of this entire float, each representing an American Beauty rose. The lower part of their costumes was of green. Turned-up berths of deep red gave the appearance of petals, and the yellow centers were made with yellow ruffs around the neck and also turned up. Each girl wore her hair in braids wrapped around and around the head and powdered. Five boys in white suits with long colonial coats, and white shoes and stockings, also occupied positions on the float. There was a touch of comedy about this float, contributed by a small colored boy dressed in a white suit with red vest and other gorgeous trimmings, who clung to the rear of the float.

There were also represented the Grant, Lincoln, Columbia and Madison Schools, all of which were lavishly decorated. This spectacle was one of genuine interest to the writer, and to any Easterner like myself a sight of this kind is marvelous.

I was also particularly interested in the California method of preserving fruits and eggs. The Pacific Supply & Brokerage Co., Severance Building, Los Angeles, gave me their recipes gratuitously and stated that they sent them to any one for the asking.

The Californians are certainly the most generous and entertaining people that I have ever had the pleasure to meet.

THOMAS F. MORGAN.

The Young Folks

THE SECRET OF THE SONG.
She stole to my side in the twilight.
The beautiful goddess of song.
Her cheeks, like the tints of the morning
And lips like the glow of the dawn.

Oh, tell me your secret I pray you,
Fair, Goddess—I boldly entreat;
Your words are like exquisite music,
Your voice is so low and so sweet:

There's a charm in each unstudied accent
Like the natural grace of a flower
I have sought it in vain in the art rooms,
I have searched for it hour by hour.

She smiled as she lifted the harebell
I'd gathered to throw away
"Why, song is a gift from God," she said,
But its mission is sympathy.

The soul of the song is greater
Than the rhythm for which you seek;
And the highest aim of the singer
Is to comfort the faint and weak.

Would you learn the fair art of the poet?
You must pass through the gateways of pain;
Drink deep, at the fountain of sorrow,
And suffer again and again.

Then listen and wait for the voices,
As you stand 'mid the hurrying throng;
And perchance in the hush of the twilight
You may catch the true "secret of song."

MARIAN GILKINSON.

Aunt Kate to Donald on the Farm.
Chicago, February 18, 1906.
My Dear Boy:—So you think that I'm neglecting you lately?

I'm sorry, but, you see, both Katherine and Jack have been getting more than their share of letters.

I have somehow gotten it into my mind that being in the city, attending Washburn, going into society a little and all that, they have needed letters from their maiden aunt, more than my big boy in the country, who might seem to have fewer trials and perplexities.

Never mind, if you go to college next

fall, you will be deluged with letters of advice and warning, as Jack and Katherine are. That's the privilege of a maiden aunt.

I have thought of you many times in the last few weeks, Donald, if I have not written.

Sometimes in the rush and push of the Chicago streets, where one has to watch out or he will be run down by teams or cars, so hurried and crowded is the traffic; where human life seems to count for so little, and where the rights of other people are quite lost sight of, apparently, I have had a quick vision of the wide, wind-swept fields, and of you, contented and happy on your upland farm. Working? Yes, but working out under God's blue expanse of sky, in the wind and the sunshine, with space to grow mentally, physically and spiritually; with the birds and bees and God's animals about you, and at your feet the springing wild flowers, and the waving prairie-grass—time to grow broad-minded and strong and manly; time to think—time even to dream, perhaps. How can men think their highest, nobles thoughts in the whirl of a city like this, Don?

I want you to go to college and, in some measure, fit yourself for life. Then I want you to go back to the farm and live. Much of this is not living, it is only existing. You can see it in the harassed, careworn faces and the indifferent glance.

Life becomes a great whirling machine, and the weary, seething mass of humanity needs must follow the ceaseless grind. By all means, Donald, choose the farm. If you want to live, and get the sweetest and best out of life.

You want to know what I think of fraternities? You are going to have your mind made up, as to what you shall do when you do enter college, I see.

Now, Donald, what I honestly think, isn't at all popular. But I am given to telling the exact truth when I do express an opinion, and since you ask it, here it is:

I believe that neither fraternities nor sororities have any proper place in high schools. I believe that colleges would be much better off without them. They do not belong to my ideas of democracy and general good fellowship. They necessarily detract from one's interest in school work, which is primarily the reason that young people are in college. Their tendency is to make study almost if not quite secondary. They add to the expense very materially, and help to foster a spirit of rivalry. During the times when new members are being "rushed," lessons are bound to suffer. They are exceedingly selfish, for many fine young people are neglected, and their good and sterling qualities hardly discovered, if they choose to join no fraternity.

I believe it to be true, that young men will condone a grievous fault or excuse a hurtful habit in another young man, if he happens to belong to the same fraternity with themselves. But, more than all, I believe that it takes from the interest that young men feel—or might be led to feel—in church affairs.

I think if you can be happy at college without joining a fraternity, your school work will be better, more effective and less selfish.

You say that next week you want some advice of a different kind.

Why, I shall presently be getting vain—and conclude that I'm an oracle—a veritable "Lady from Philadelphia." With love,

AUNT KATE.

Musical Insects: The Giant Katydid. (Cyrtoophylus perspicillatus, Linnaeus).

ELBERT S. TUCKER, MUSEUM ASSISTANT IN SYSTEMATIC ENTOMOLOGY, UNIVERSITY OF KANSAS, LAWRENCE.

One blessing, perhaps, that we ought to be thankful for is that only certain small groups of night insects are musical; if all kinds of insects were as noisy as some examples of the orthoptera, such as crickets and katydids, there is no telling whether a person would be able to sleep in the summer time. A year ago last summer, I heard reports of a noisy creature that disturbed the slumbers of people in its vicinity, and then I read in the local paper that it had met its fate. The notice was as follows:

"KATYDID SANG ALL NIGHT."

"The neighbors in the 700 block, Tennessee Street, have been greatly annoyed for the past week by a katydid. It would sing all night long and sang so loud that some thought it must be a tree-toad. All attempts to shake it from the tree proved useless. It was caught last night and could be termed a giant katydid. It measured

Backache, "The Blues"

Both Symptoms of Organic Derangement in Women—Thousands of Sufferers Find Relief.

How often do we hear women say: "It seems as though my back would break," or "Don't speak to me, I am all out of sorts"? These significant remarks prove that the system requires attention.

Backache and "the blues" are direct symptoms of an inward trouble which will sooner or later declare itself. It may be caused by diseased kidneys or some derangement of the organs. Nature requires assistance and at once, and Lydia E. Pinkham's Vegetable Compound instantly asserts its curative powers in all those peculiar ailments of women. It has been the standby of intelligent American women for twenty years, and the best judges agree that it is the most universally successful remedy for woman's ills known to medicine.

Read the convincing testimonials of Mrs. Holmes and Mrs. Cotrey.

Mrs. J. C. Holmes, of Larimore, North Dakota, writes:

Dear Mrs. Pinkham:

"I have suffered everything with backache and female trouble—I let the trouble run on until my system was in such a condition that I was unable to be about, and then it was I commenced to use Lydia Pinkham's Vegetable Compound. If I had only known how much suffering I would have saved I should have taken it months sooner—for a few weeks' treatment made me well and strong. My backaches and headaches are all gone and I suffer no pain at my monthly periods, whereas before I took Lydia E. Pinkham's Vegetable Compound I suffered intense pain."

Mrs. Emma Cotrey, 109 East 12th Street, New York City, writes:

Dear Mrs. Pinkham:

"I feel it my duty to tell all suffering women of the relief I have found in Lydia E. Pink-

ham's Vegetable Compound. When I commenced taking the Compound I suffered everything with backaches, headaches, and female troubles. I am completely cured and enjoy the best of health, and I owe it all to you."

When women are troubled with irregular, suppressed or painful periods, weakness, displacements or ulceration, that bearing-down feeling, inflammation of the female organs, backache, bloating (or flatulence), general debility, indigestion and nervous prostration, or are beset with such symptoms as dizziness, faintness, lassitude, excitability, irritability, nervousness, sleeplessness, melancholy, "all gone" and "want-to-be-left-alone" feelings, blues and hopelessness, they should remember there is one tried and true remedy. Lydia E. Pinkham's Vegetable Compound at once removes such troubles.

No other medicine has such a record of cures of female troubles. No other medicine in the world has received this widespread and unqualified endorsement. Refuse to buy any substitute.

FREE ADVICE TO WOMEN.

Remember, every woman is cordially invited to write to Mrs. Pinkham if there is anything about her symptoms she does not understand. Mrs. Pinkham is the daughter-in-law of Lydia E. Pinkham, her assistant before her decease, and for twenty-five years since her advice has been freely and cheerfully given to every ailing woman who asks for it. Her advice and medicine have restored to health innumerable women. Address, Lynn, Mass.

Ask Mrs. Pinkham's Advice—A Woman Best Understands a Woman's Ills.

about an inch and a quarter long and had a very large body; its wings were immense. It will be a good specimen for one who is collecting insects."

(From Lawrence Journal, August 4, 1904.)

On inquiring if the specimen could be obtained, I learned that chickens

A Pair of Giant Katydids. Male (upper figure) and Female. From Nature. Reduced to one-half natural size, from plate in "Tenants of an Old Farm."

had eaten it. However, my disappointment was banished a few nights later when I heard a strong, rasping noise which issued from a tree near a neighbor's house, on a lot next to where I lived; and as it continued all night, I

judged that an accommodating specimen of what I wanted had located especially for my benefit. A night or two after, when another songster began calling, I concluded it was time to make an attempt, at least, to capture one or both of the supposed insects. So, provided with a lighted lantern and a poison bottle, one night I climbed the tree, a moderate sized elm, in which the first fiddler was harbored, and located the fellow by his racket. He was a little cautious when I approached him with my light and stopped fiddling, but remained within reach, although attempting to conceal himself among leaves on the under side of a branch. With one well-aimed grab, I secured him in my hand and soon he reposed safely in my poison bottle. However, his comrade in another tree, a smaller elm, repeatedly evaded me by climbing out to the tips of branches beyond reach and out of sight. The captured specimen was identified as *Cyrtophyllus perspicillatus*, Linnaeus, and is now the only example of its species in the University collection.

To show some inquiring neighbors how the insect's call was produced by a rubbing action of the fore wings, I caused the note to be sounded artificially, after the insect was dead, by moving those wings back and forth in the grasp of my fingers, quite to the astonishment of my audience. As might be expected, however, the sound thus reproduced was not so loud as the live insect made.

For an explanation of the musical apparatus of insects, or in answer to the question, "Do all insects make their music in the same way?" I beg to refer the reader to the chapter treating of music-making insects, in the book entitled, "Tenants of an Old Farm." In part it says:

"In the katydid, for example, the musical instruments are a pair of taborets." (Then follows a description of the insect, together with illustration, the latter, herewith exhibited, represents both male and female to better advantage than words can portray.)

"The taborets are formed by a thin and transparent membrane, stretched in a strong, half-oval frame in the triangular overlapping portion of each wing-cover. When the male wishes to sound his call, he opens and shuts the wing-covers so that the frames of the taborets rub rapidly and violently against each other. The mechanism of the taborets and the concavity of the wing-covers reverberate and increase the sound to such a degree that it may be heard in the stillness of the night at the distance of a quarter of a mile.

"The music of the katydid is certainly remarkable considering how it is produced. It consists of two or three distinct notes, almost exactly resembling articulated sounds. These correspond to the rapidity with which the wing-covers are shifted across each other, and the note produced is very well expressed in the popular name of the insect.

"The story of katydid's development is but a repetition of the cricket's. It is found in the perfect state during the months of September and October, at which time the female lays her eggs. These are about an eighth of an inch in length, and resemble tiny, oval, bivalve shells in shape. The insect lays them in two contiguous rows along the surface of a twig, the bark of which has been previously shaved off or made rough with her piercer. Each row consists of eight or nine eggs, placed somewhat obliquely and overlapping each other a little, and they are fastened to the twig with a gummy substance. In hatching, the egg splits open at one end and the insect creeps through the cleft. Its history after that, as I have said, quite resembles that of other orthoptera."

Numerous examples showing these eggs in natural positions have some under my own observation. They have been found in fall, winter and spring, with the eggs exposed just as they were laid, both to enemies and weather. The instances are recorded as follows: In September, on weed-stalk; in February, on twig; in March, on apple twig; in May, on grapevine—all in Douglas County; and in April, on twig of peach in bloom, Sedgwick County, Kansas.

Another case somewhat perplexed me as to whether I had found cricket or katydid eggs. Two crickets, specimens of the common black kind, flew in at the window of my bedroom during one July night, probably being attracted by lamplight, and then escaped from my efforts to capture them by springing into the recesses among my books stacked on shelves against the wall. From this place, strong chirping sounds were emitted which frequently awakened me from sleep during two or three nights afterward, until finally search was made to catch them, but in vain.

The disturbance evidently caused them to move elsewhere, for they were neither seen nor heard any more. However, a few days later, while shifting some of the books, a double row of eggs was noticed on a paper-covered catalogue, one row extending along the back and the other adjoining along the edge of the cover. My first supposition was that one of the erickets, the mate of the fellow that chirped so freely, had laid these eggs; but, on the other hand, their appearance and arrangement was exactly like those of a katydid. Hence, I have since wondered how a katydid could enter and leave my room without being detected, or why it should lay eggs where the young ones when hatched would perish for want of food. An explanation should be included here to the effect that in all these cases, very likely, the eggs belonged to common species of the katydid and not to the giant katydid, which, as mentioned, is a rare insect in Kansas. Katydids usually frequent wild thickets and do little damage to vegetation, compared with crickets.

Since so much information has been drawn from the book, "Tenants of an Old Farm," due appreciation of this commendable work should be accorded here. The presentation of scientific truths in the form of a popular narrative, such as would hold the attention of the ordinary reader, is a plan well carried out by the author of this book, Doctor H. C. McCook, and its success is now attested by a new and revised edition. What grand opportunities for revealing Nature's secrets are found on every farm, but how few are the persons who regard the wonders about them! Even the smallest creatures, as the common insects and spiders, live romantic lives, making marvelous provisions for their protection and sustenance, which people are too prone to overlook.

The book purports to have been written by a professional man forced by ill health to give up a lucrative practice and live for a time on a farm. But here, he finds he is not the only tenant, and his love of natural history induces him to study the insects and spiders, thereby affording a healthful as well as instructive diversion. His observations are presented in the form of entertaining stories which are told in a conversational way, as if to friends and members of his household, who often enter into a general discussion during their evening gatherings about the fireplace, and many amusing incidents are related. Besides, the book is replete with illustrations from nature, interspersed with comical adaptations, from the drawings of master artists. It is not only a revelation to country folks, but brings the charm of rural study direct to the city home.

The Little Ones

WHY?

"Brother," said Ruth to Teddy, one day, as the children were out in the yard at play. "I don't see how the little plants know they should send their leaves up and their roots below." "How do you know," he scornfully said, "You should stand on your feet, and not on your head?"

Johnnie's Fun.

GERTRUDE L. ARNEL.

"Johnnie, I want you to take care of baby Harold while I go over to Mrs. Brown's," mamma said. "He is asleep in his cradle and may not awake until I return."

"All right," Johnnie promised. It was great fun for awhile. He played that he was a soldier on guard and marched up and down before the sitting-room door; but that soon grew monotonous—because, as he said, he "couldn't shoot nothing without wacking the baby." He went out in the kitchen and played that he was a great hunter, and had thrilling adventures with wildcats, until Puss and Tabby, tired of the fun, took themselves off to the barn.

He wandered listlessly into the sitting-room. The baby was still sleeping. Over in one corner stood the tin soldiers. Johnnie thought at first he would get them out and play war. "But, pshaw!" he thought, "I'd have to push them every step they took, and when I get ready to charge, as real soldiers do, they always fall over."

Suddenly he exclaimed: "I know what I can do. I'll have a sale. Guess they can listen most as good as anybody, if they can't walk."

The tin soldiers were arranged in the center of the room. A chair before them served for a platform. Papa's big hammer was brought from the tool-

house, and everything was now ready for the sale—except the things to be sold. Puss and Tabby were brought in, but they positively refused to be put up at auction. "Nobody would want to buy eats anyway," Johnnie reflected, nothing daunted. If he only had some pigs or a calf—but that seemed impossible, unless—he might go out to the barn if he could leave the baby. Then the idea came to him, why not sell the baby? Wouldn't it be fun to black it and pretend it was a negro? Of course, no one would want to buy a little white baby.

Now Johnnie was not naturally a bad boy. That is, he meant to do right. But sometimes in the excitement of his play, I fear his ideas of right and wrong became badly twisted, for he did things "just for fun," that at other times he would have thought mean. If he had any misgivings about making a negro of his little brother, he excused them with the thought that he "would wash it all off 'fore mamma came home. Besides, 'twouldn't hurt the baby and 'twould be such jolly fun."

"The baby looked comical when it was blackened, and Johnnie felt quite elated over his success. He climbed on a chair and began to auctioneer.

"Gentlemen and Ladies," he said, "I has a little orphan nigger to sell. His Massa and Missus is gone and I'se his guardian. I'se going North and can't take him with me. He's as black as—as soot can make him. Black enough for two niggers. Aged one year the day Jimmy Brown and me made that big snow-man; and we had cake with his name on it for dinner—the baby's I mean. He won't run away, gentlemen 'cause he can't walk yet. He—"

Crash! The hammer slipped from Johnnie's fingers and fell on the tin soldiers. The baby awoke and began to cry. Johnnie tiptoed over and rocked the cradle, but baby was wide awake now. He took it up, and it immediately began to slap his face with its little black hands. Johnnie found, to his sorrow, that it was "black enough for two niggers." Just then the door opened and mamma came in.

Johnnie fervently hoped that she would whip him right then, and not wait to ask questions. But mamma thought different. She heard his explanations while she washed the baby. Then she smiled and said: "Johnnie you look so comical; you may leave the black on your face. Some one might come in, and wouldn't they laugh to see my little negro boy?"

Poor Johnnie! He answered "Yes'm," and meekly walked out of the room. Some way acting a negro had lost its fun. He hurried out to the barn for fear some one might come and see him. He was having a nice time turning somersaults on the straw, when he looked up and saw Jimmy Brown in the door.

"Who-oo-ee!" Jimmy exclaimed, with a broad grin. "Turned nigger, ain't you? Say, you're pretty. Oh, watch out, don't get too close to the horses, you might scare them," he said, as Johnnie jumped onto the floor before him.

"Jim Brown, you scat for home an' don't you never come here any more!" Johnnie cried, angrily.

Jimmy "scatted" off a little ways, then turned and called out: "Say, next time you turn nigger don't forget to black your nose. You'd make a first rate picaninny if the white didn't shine through."

Johnnie did not answer him but started toward the house. He met Uncle Fred at the door.

"Hello, Johnnie boy," he called out, and then started back, surprised. "Why, what's the matter with your face? Have you begun to mortify?" he asked, laughing.

"Ye—Yes, sir, I feel mortified," Johnnie stammered, not knowing what else to say, and thinking perhaps Uncle Fred would sympathize with him. But Uncle Fred only laughed the more. That was too much for Johnnie when he expected sympathy. He began to cry.

"Why, Johnnie, I thought it was such fun to play negro," mamma said.

"Well, 'tain't," sobbed Johnnie, "an' 'twas mean to take 'vantage of baby that way. 'Tain't fun at all unless you can laugh with the other fellows."

"That's right, my boy," mamma said, "and I suspect it is not really fun for the 'other fellows.' I think it is just selfish amusement."

Burly Party—Are you aware, sir, that you deliberately placed your umbrella in my ear last evening?

Little Bifferton—Very careless of me, I'm sure. I wondered what became of it; and would it be too much trouble to ask you to return it?—Exchange.

The Delicious Fragrance

from a hot Royal Baking Powder biscuit whets the appetite

ROYAL Baking Powder improves the flavor and adds to the healthfulness of all risen flour-foods. It renders the biscuit, bread and cake more digestible and nutritious.

Royal Baking Powder makes hot breads wholesome. Food raised with Royal will not distress persons of delicate or enfeebled digestion, though eaten warm and fresh.

A WOMAN'S CLUB.

What is a woman's club? A meeting ground For those of purpose great and broad and strong Whose aim is toward the stars; who ever long To make the patient, listening world resound With sweeter music, purer, nobler tones. A place where kindly, helpful words are said And kindlier deeds are done; where hearts are fed; Where wealth of brain for poverty atones, And hand grasps hand, and soul finds touch with soul. Where victors in the race for fame and power Look backward even in their triumph hour To beckon others toward the shining goal.

What is women's club? The fabric of a dream Touched with an altar coal and made alive, Instinct with hope for those who toil and strive And wait to catch that joyous day's first gleam That ushers in a better, freer age. When right for one shall be for all the right; When all who meet in life's recoil and fight The war for right and truth shall bravely wage.

—HELEN M. WINSLOW, in Club Member.

ART PROGRAM.

Jules Breton.

Roll call—Pictures.
I. Childhood of Jules Breton.
II. Years of preparation.
III. "Gleaners."
I. A paper telling of the childhood of Jules Breton (pronounced Bre-tong with accent on the last syllable) may be made picturesque and entertaining. It may be written so as to portray the customs and manners of the French people at that time, perhaps bringing in a little of their history.

II. This subject may cover the years beginning with his life at the seminary, and embrace the few years he spent in college, the longer and more congenial period at the Royal Academy at Ghent, and his travels, carrying it to the death of his father and the Revolution of 1848.

III. The "Gleaners" is one of his best paintings. It will be interesting to compare it with Millet's (Me-ya with accent of last syllable) "The Gleaners" and note the difference. They are both pictures of peasant life and represent work, but the point of view of the two artists is so different. Breton's is bright and happy, portraying work as joyous. Millet's is sad and cheerless. Millet spent his life in dull, cheerless rooms while Breton's life was one of joy in a happy home.

Sabean Club.

The Sabean Club has lost a number of its active members by removal, yet those remaining seem no whit discouraged.

We have finished the course taken up last year, the Bay View course, through the history of Russia and Japan, deciding for the short time re-

maining for work, to adopt a miscellaneous program, leaving it in the hands of the president to formulate from suggestions by the members. A desire for a more comprehensive knowledge of politics was expressed, and that illusive and delusive subject was made the program for a particular meeting. Though nearly every shade of political creeds has its representatives in the club, it did not prove to be a remarkably warm number after all. The subject was fairly discussed. One thing upon which the club was unanimously agreed was that given the ballot, the women of Kansas are quite ready to prove that the purification of politics is not an iridescent dream. This does not refer to the municipal ballot.

The program for February 27, is quite varied and yet has a similar trend:

I. The situation in Parliament (British).—Mrs. John Clarke.

II. The separation of Sweden and Norway.—Miss Bertha Moore.

III. Affairs at Washington. (Not the affair).—Mrs. Alice Walton.

IV. Should women study the laws of Kansas?—Miss Nettie Bliss.

V. The influence of woman in municipal affairs.—Mrs. Harding Buckman.

The club meets on alternate Tuesdays. At the beginning of the year it was decided to take up some charitable work in addition to the literary program. In this we have not been very successful. Living so far apart it is difficult to work unitedly, though each has accomplished something individually. I question if we might not accomplish better results by federating with the city clubs, and this idea has been made prominent by the president. However, at the annual business meeting it was decided in the negative.

The officers for 1905-1906 are: Mrs. McCracken, president, Mrs. J. D. Corbet, vice president, Miss Bertha Moore, secretary. The club colors are royal purple and gold.

That this club has maintained its organization for a period of six or seven years is proof positive of the progressive spirit of its members.

KITTIE J. McCRAKEN.

The Club department is delighted to welcome another club to its roll. The Chaldean Club is a rural club near Sterling and was organized nearly two years ago by four ladies from the Sorosis Club, Sterling. The membership numbers fifteen and they meet every two weeks. The club flower is the sunflower, and the club colors are yellow and brown. They also have a club chorus which is as follows:

"Oh, the farmers' wives are extra superfine, In the fashions they are strictly up to time; They have beauty, brains and worth, They are the dearest wives on earth, Hurrah, for the Chaldean Club."

Mrs. Zeno Dymond, the secretary, says, "Our programs are miscellaneous, but so far we have never had any but literary programs. We meet every two weeks when we lay aside our household duties and enjoy the afternoon, and rest from our work, a recreation we farmers' wives so much need." Here is a program of one of the meetings:

Roll Call.....Current Events
The True Queen of the Home....
The New Cook.....Mrs. Feighner
Reading, "When Company Comes..."
.....Mrs. Hutchens.

Improved machinery which combines the performance of several operations, facilitates cultivation and lessens farm labor is something no agriculturist can afford to be without. In these days of large crops and small profits the great question with the market gardener should be the least expensive means he can employ for preparing the ground for planting his crop and cultivating it. Proper planting is a very essential object in saving labor in after cultivation.

The seed drill that has the reputation of many seasons' use, one that in operation opens the furrow, drops the seed accurately at the desired depth, covers it and lightly rolls the earth down over it and marks the next row with such precision as to admit of cultivation with implements that are furnished as attachments is a safe article for the farmer to invest in.

Such an implement is made by the Ames Plow Company of Boston and New York. They also offer the seed drill and Wheel Hoes as separate implements. The Mathews principle which is embodied in the construction of these implements has been copied by nearly all makers of seed drills. This is in itself the strongest kind of a recommendation for the genuine goods. As offered by the Ames people this year they have all the up-to-date improvements. You should send to these manufacturers for further particulars. The Ames Plow Company have probably had more experience in the manufacture of hand seeders and cultivators than any other concern in this country. They first illustrated them in a catalogue published as early as 1847. It is indeed remarkable that one concern should be able to keep at the head of the market for so many years, but the name, Ames Plow Company, and the sterling worth of their goods, are known throughout the world.

The Sabean Club has lost a number of its active members by removal, yet those remaining seem no whit discouraged.

We have finished the course taken up last year, the Bay View course, through the history of Russia and Japan, deciding for the short time re-

Simpson - Eddystone Solid Blacks

Beautiful rich-looking fabrics with great intensity of color. Do not fade or wash out. The standard materials for mourning dresses.

The Eddystone Mfg Co (Sole Makers) Philadelphia

CASH! PIANOS! GUNS! FREE!

Most novel contest ever inaugurated! All these prizes will be given away. Our contest is new and it is a puzzler! Here is one to test your ingenuity! You have seen the old word building contests! Our offer is not to see how many, but how few words you can make! It doesn't mean all night going through a dictionary to find how many, but it means sitting right down and using your head. Our prizes will go to the bright ones. You are as likely to win as anybody. Surely you can arrange these letters in as few words as anybody. Any English word may be used. No foreign words or proper names. Every letter left over counts as a word.

OUR OFFER We will give \$5.00 to the person who arranges these letters into the fewest English words. \$25.00 cash to the next nearest. \$10.00 cash to the next, \$5.00 to the next, and \$1.00 to each of the next five. Send in your lists. There are no conditions in the contest for these prizes. Send in your lists at once. Just as soon as it is received we will send you our complete offer.

Here are the letters! Q-A-E-M-C-I-N-T-A-S-A-N-C-D-I-U-E-R-T-S-N-E-E-N-T-C-N-T-S-T-U-T-O-I-N-L-A-U-O-A-I-V

Use only the letters above and only as many times as they appear above.

An example! For instance the following words can be made: Us-an-sun-to-in-at-it-no-neat-vat-quit-me-scene-laid and three letters, c, r and e, left, counting same as 17 words. Now take the C left over and put it with "an" and you have "Can" and thereby reduce your words to 16. Another C added to "at" makes "Cat" and reduces your number to 15. See how few you can get. The words we have given are just a suggestion. Just to explain the idea. Of course the idea is to use as long words as possible so as to use up your letters. The word "consider," for instance, uses up eight letters. Go to work at once. We have given you a big jumble of letters. Don't expect to get them in too few words. The person winning first is likely to have over a dozen words in the list. If you can get that few, send in your list sure.

SUCCESSFUL FARMING, 324 Tenth St., Des Moines, Iowa.

A POWER on Every Farm

THERE should be a power of some kind on every farm.

It saves labor, time and money, and increases the earning capacity of the farm.

It will work the raw material of the farm into a finished product.

All up-to-date farmers agree that the modern gasoline engine is the best farm power.

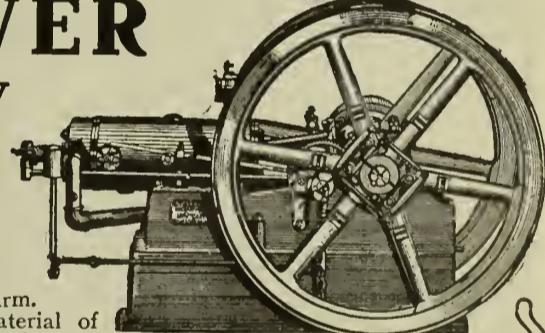

Our I. H. C. gasoline engine is the **best gasoline engine**.

It is strong, durable, long lived and is of full rated, actual (not estimated) horse power.

It is easy to operate and is easily kept in working order.

It develops the maximum of power with the minimum of fuel.

Specially adapted to cutting dry fodder and ensilage, husking, shredding and shelling corn; threshing

and grinding feed; sawing wood, separating cream, pumping water, etc.

Indeed there is no service required of a power that will not be performed most satisfactorily by this engine.

I. H. C. gasoline engines are made in the following styles and sizes:

Vertical—2, 3 & 5 Horse Power;

Horizontal—(Portable and Stationary), 4, 6, 8, 10, 12 & 15 Horse Power.

If you are not intending to purchase an engine now, you may want one in the future and really ought to know more about them.

Call on our Local Agent, let him show you the engines and supply you with catalog, or write for further information. Do it now.

INTERNATIONAL HARVESTER COMPANY OF AMERICA, CHICAGO, ILL.

Excellent opportunity to purchase first-class, well-equipped dairy farm. M. V. RICHARDS, Land & Industrial Agent, Washington, D. C.

Miscellany

Seven Principles in Making and Maintaining Earth Roads.

E. C. COWLES, BEFORE THE TRI-COUNTY FARMERS' INSTITUTE, WELLSVILLE, KANSAS.

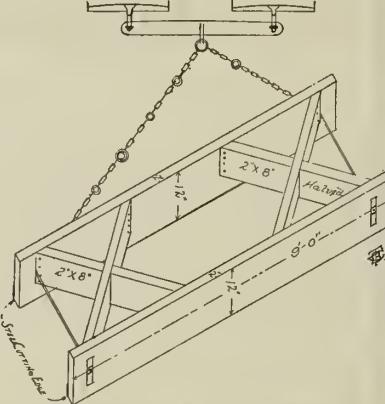

It is a general complaint that our roads are not made much better from year to year under our present system of working them.

It seems to me that there are no general principles applied in the working of the roads. There are at least seven principles which can and ought to be applied in road construction.

(1) Economy; (2) width; (3) completeness; (4) yearly care; (5) convexity; (6) hardness; (7) smoothness. Now while the sixth and seventh are by far the most important, they all center in the first.

1. Anything that touches our pockets we are apt to consider of the first importance. There is a true and there is a false economy in working the roads. The false is to work for present results without much regard for the future; the true is for future good.

2. The second principle is width. If we call the working and care of a 20-foot road with 10-inch rise one, the work and care of a 25-foot road with 12-inch rise will be one and eight-tenths; and a 30-foot road with 15-inch

rise will be three and three-tenths. Do we need the wide road? More than nine-tenths of the travel is on less than 8 feet of a good road. Twenty feet wide with 10-inch rise is sufficient for two loads of hay to drive abreast. What more width do we need?

3. Now for the application of the third principle, completeness. Even with the best use of the large grades, there will be some uneven places which eventually will become mud-holes without some extra work, and especially will it be the case with both sides of culverts, as the grader must be raised to pass the culvert. Also the ditch will not be open to let the ditch water away from the road. Under this head is a need of an extra man and team along with the grader to smooth the dirt the grader has thrown up, also with harrow and roller and slip scraper to complete the work.

4. The yearly care is quite as important as either of the others. How often we see the commencement of a mud-hole which could be stopped with two or three scrapers full of dirt, or the ditch-water starting to wear into the side of road. A few minutes' work would save the road, which work, if done in time, will save one-half of the work expended at that place. These little things, if not seen to and fixed in time, are the cause of the lack of improvement of our roads from year to year. When should this care be given? When the smoother is being used from time to time.

5. Convexity should be one-half inch to each foot of width of road worked, that water may leave the road-bed and not soak in.

6. Hardness will be accomplished by the use of a three-ton roller, puddling of road by travel and the use of some kind of a smoother.

7. The principle of smoothness, while not as costly as grading, should be the most frequently applied and is really of more consequence than grading or any other operation, for the purpose of keeping a good road. How frequent, depends upon the amount of travel and kind of soil; near town twenty to twenty-five times in the year or as often as the road becomes a little rough; farther in the country eight to twenty times, or at all times after a rain if there is any show of ruts or roughness.

Now for the cost for 1906. I will suppose that we have an eastern average township of 140 miles of road. As our roads are tolerably well graded, we will

REAL ESTATE.

FOR SALE.—320 acres in Kiowa Co., 80 in wheat, which goes with the place. Six miles from county seat. Price, \$3,100. C. W. Phillips, Greensburg, Ks.

WANT WESTERN LAND or cash in exchange for the Best Welding Compound on the market. Something every blacksmith in the United States uses. One hundred pounds free goes with the formula for making the compound. Just the thing for the man who wants to retire from the farm. Address box 27, Waurika, Oklahoma.

FOR SALE.—If you are looking for a farm at a bargain, I have got it. Eastern owner wired me to sell. 100 acre improved farm in Woodson county, Kansas, south of Toronto. 100 acres in cultivation, all fenced with hedge and wire. If sold by the 15th of March \$11.00 per acre. W. W. Manspeaker, No. 819 Kansas Avenue, Topeka, Kansas.

FOR SALE.—Forty-two acres of land adjoining the city of Erle, Kansas, county seat of Neosho. This land was formerly the old fair grounds, and has about \$3,500 worth of buildings on it; some timber, good soil, and plenty of water. Will make the finest place in Kansas for a hog farm. Will sell or rent or go in partnership with a good man with some money who understands raising pure-bred hogs. C. E. Shaffer, care of Kansas Farmer.

FOR SALE

Farm 2,160 acres, 570 acres in wheat. 1,800 can be farmed. I also have 150 steers, horses and outfit. Will sell at a bargain. C. W. Phillips, Greensburg, Ks.

A CORN AND ALFALFA FARM.

FOR SALE—One of the richest improved farms on Prairie Dog Creek. Soil is black loam that yields big crops every year. This year an average of 60 bushels of corn, about thirty acres in pasture and timber, 15 acres in alfalfa, balance corn land. Good house and barn and other farm buildings. On account of change of business the owner desires to sell soon. Address

M. E. Beall, Woodruff, Kans.

If you have farms, ranches, or city properties for sale or trade anywhere in the State, we would like to have you list the same with us by sending a thorough description together with lowest prices and best terms. We have a fine list of city properties in Topeka and farms around the city, some for trade.

MOON, CHARLES & MOON,

GREATEST OF ALL
IRRIGATION PROJECTS

on the American Continent, now being constructed by

CANADIAN PACIFIC RY.
IN
Southern Alberta,
Canada

The land that's famous for its tremendous crops of Hard Winter Wheat, Alfalfa and Sugar Beets.

100,000 Acres
ARE READY TO SELL

A million and a half acres will eventually come "under ditch".

Price \$18 to \$25 an Acre

On Exceptionally Easy Terms

This land is located just north of the main line of the

Canadian Pacific Ry.,

in the heart of the so called Gleichen tract, where 45 bushels of wheat and 80 to 100 bushels of oats have been raised to the acre without irrigation. What will the land do with irrigation? There is some attached areas of non-irrigable land which are perfect for grazing lands.

This makes an ideal combination of irrigated and non-irrigated land.

There are but few of these

Combination Farms

It will be wise for you to select at once.

Wheat Farms on Easy Terms

We offer to BONA-FIDE SETTLERS their choice of one-hundred
160 acre farms in
Sherman County, Kansas

At from \$5 to \$15 per acre. ONE TENTH CASH, the balance payable in nine equal annual payments. One crop will pay for the farm. Healthful climate, splendid schools, railways close at hand, good neighbors. Soil is black loam, good depth, no sand, very productive. 1905 Wheat crop averaged 25 bushels to the acre. Write me at once, as these farms will not last long at the present prices.

Albert E. King,

= = =

McPherson, Kansas

need to grade only 70 miles, but care for and smooth 140 miles.

Grading for 70 miles at \$12 per mile, \$840; yearly care of 140 miles at \$1 per mile, \$140; smoothing, 140 miles at \$3 per mile, \$420; finishing 70 miles after grading, at \$3, \$210; total cost for year 1906, \$1,610; cost per mile per year \$11.50.

Cost for 1907, by need of less grading, need not cost over \$8 per mile. How shall this work be done? By contract per mile. Why? Because the average roadmaster will get only about two-thirds as much work done by the day at the same cost as will be done by contract per mile.

Why not smooth by voluntary work? Because after a little time the smoothing will not be done on time. Also, because only a few will volunteer to do the work, and therefore there will be no equality in the work of those who use the roads.

While we have much law concerning our roads, I think of only two changes needed. First, compel the town board to let all work by contract. Second, reduce allowance for poll tax to \$2 per day and make voting conditional upon payment of this tax.

Prizes for Good Roads.

The members of the Commercial Club of Manhattan, Kans., are very desirous of creating a deeper interest in good roads and various schemes have been proposed. At the regular meeting held Tuesday evening the matter was thoroughly discussed and it was voted that the Commercial Club of Manhattan offer the following prizes:

1. Fifty dollars (\$50) in gold for the best mile of road made with a "King road drag" within seven miles of Manhattan.

2. Twenty-five dollars (\$25) in gold for the second best mile of road made with a "King road drag" within seven miles of Manhattan.

3. Ten dollars (\$10) in gold for the best one-half mile of road made with a "King road drag" on each rural route leading from Manhattan.

4. Five dollars (\$5) in gold for the second best one-half mile of road made with a "King road drag" on each rural route leading from Manhattan.

5. No prize of road to take more than one prize.

6. No prize-taking piece of road to be eligible for the same or a lower prize the second year.

7. Competitors to furnish their own drags.

8. The Commercial Club to select the judges of the contest; said judges to be three absolutely disinterested parties.

9. The judging of the roads to be done at some time between April 15 and May 15, 1907.

Peculiar Well Water.

Replying to Frank W. Shill, Liberty, Kans., Prof. J. T. Willard, Director of the Kansas Experiment Station, says:

"I can not tell from your description what the substance is in your well-water that causes it to turn white when allowed to stand. You do not mention any odor so I suppose it is not what is called a 'sulfur water.' If you will procure a clean, half-gallon, glass-stoppered bottle, such as druggists get ammonia water or acids in, wash it per-

fectly clean, fill it full, lacking about as much as a tablespoonful, then tie the stopper in by means of a cloth put over the top, pack it carefully and ship it to me by express prepaid, I will make sufficient examination of the water to ascertain what it contains. To wash the bottle clean as specified above, there must, of course, be nothing visible sticking to it inside; then you should fill it entirely full of the water, pour this out completely, then rinse the bottle five or six times more with the water from the well before putting in the water to send to me.

"As to the effect upon you when you went down into the well, it is possible that the well contains carbonic acid gas or, as it is sometimes called, 'choke-damp.' You might test it by lowering a lighted candle into the well, which will be extinguished if a dangerous amount of the gas is present."

Stands Up for Osborne County.

A. L. Brown, of Osborne, Kans., is one of the real estate agents of Kansas who makes a business of selling his home land exclusively. He deals in nothing but Osborne County farms,

and by square business methods has built up one of the best real estate businesses in Kansas. He believes in a great future for Osborne and Osborne County which lies in the great Solomon Valley where alfalfa, corn, wheat, oats and grasses grow in abundance. If you are looking for land write Mr. Brown and mention the KANSAS FARMER. He will furnish you full information.

When writing advertisers please mention Kansas Farmer.

IOWA SEED CO., DES MOINES, IOWA.

THE KANSAS FARMER

Horticulture

Spray For Profit.

PRESS BULLETIN NO. 129, OKLAHOMA AGRICULTURAL EXPERIMENT STATION.

The following information, regarding spraying, is intended for the grower, that he may see at a glance what to apply and when to make the application. Only the more serious pests are named, but other pests are kept in control by the spraying advised. The greatest success will come by preventing rather than by attempting to cure. Sometimes, spraying does not seem to be necessary, but the time has come when the man who does spray, regardless of appearances, will not suffer the losses of his less careful neighbor. Plant injuries are rarely cured. The fruit-grower should prevent them. He should know the cause, know the remedy, and know when to apply the latter so as to prevent losses. Spraying is as necessary a practice as cultivation and pruning. Get the spraying apparatus in shape before spring farm work begins. If necessary to purchase, send for circulars to those companies advertised in your farm papers. There is no best pump or nozzle. Some devices are better for particular kinds of work. Know what you want the machine for, and buy with that in view. The kind of machine will depend upon the kind of plants to be sprayed and the kind of spray to be used. It does not pay to get other than a good pump, one that works easily and has power enough to throw the spray in a fine mist, at the same time, keeping the solution thoroughly agitated in the barrel or tank.

Be ready to spray this year. It is good insurance and will pay good returns on short time.

Begin to spray the orchard and vineyard before the buds swell in the spring and repeat the operation every two weeks for at least four times, and the result will be a saving of from 85 to 95 per cent of the crop.

If spraying solutions are correctly made and applied, there need never be any danger of poisoning the fruit for food. Fruit to be placed upon the market should be sprayed the last time with a solution that will not discolor it.

Bordeaux mixture will destroy fungus diseases and Paris green will kill insects. These two sprays may be easily combined, making a solution called Paris green Bordeaux, which when sprayed upon the trees will have the same result as Paris green and Bordeaux mixture when sprayed on separately.

The following treatments are general for the named classes of fruits, but if carried out each year by the orchardists and agriculturists in the same way that they would carry out cultivation, rotation or fertilization, it will mean the saving of thousands of dollars to their income each year, in Oklahoma alone. The diseases and insects, although they have not been here long, have come to stay, and will be even more troublesome from year to year.

Look over the following groups of plants to see what to do and when to do it for that particular group.

APPLE ORCHARD.

1. Spray with copper sulfate just before buds start in the spring, for bitter rot, black-rot and scab.

2. Spray unfolding leaves with Paris green Bordeaux for bud-moth and apple-scab.

3. Spray as soon as the blossoms fall with Paris green Bordeaux for codling moth, curculio, canker-worm, caterpillars, scab and sooty blotch.

4. Keep the foliage well covered with Paris green Bordeaux until fruit is nearly grown, for succeeding broods of insects and further fungus troubles.

When the fruits is nearly matured, a spraying with ammoniacal solution of copper carbonate will have nearly the same effect as Paris green Bordeaux, and will not discolor the fruit.

Do not put copper sulfate on the trees after the foliage is out.

Flat-headed and round-headed borers burrow in the base of the trunk. Watch trees and cut out borers whenever castings appear.

Keep all windfalls picked up and destroyed or feed out.

CHERRY, PLUM, PEAR, APRICOT AND PEACH

1. Spray with Bordeaux mixture before the leaves unfold.

2. Spray with dilute Bordeaux mixture just after the blossoms fall.

3. Spray with dilute Bordeaux mixture two weeks after the second spraying.

Dilute Bordeaux mixture is used for the second and third sprayings because of the tender foliage of this group of

trees. Pears may be, however, sprayed each time with the Bordeaux mixture.

These sprayings will be effectual for leaf-spot, mildews, leaf-curl, scab, brown-rot and plum pockets.

In case of pear blight, winter-prune all diseased branches, cutting off several inches below the diseased area. Several weeks after blossoming, remove all young dead twigs in the same way. Use a knife that is sterilized from time to time by wiping it with a cloth saturated with carbolic acid. The disease occurs also on apple and quince. Use the same treatment.

BLACKBERRIES, RASPBERRIES, DEWBERRIES.

1. In fall or winter remove all canes infested with cane-borers, orange rust, and crown-gall, and burn.

2. In spring, before the buds swell, cut off and burn all canes badly spotted with disease and spray the rest with Bordeaux mixture, repeating the spraying when the young shoots are about six inches high, and again in ten to fourteen days. Aim to cover the young shoots with spray. This treatment is for anthracnose, cane-blight, and leaf-spot diseases.

STRAWBERRIES.

Spray with Bordeaux mixture before blossoming and twice after the fruiting season.

In fall run over badly infested beds, add a little straw and burn.

Frequently renew beds.

These treatments will keep the crown-borer and the leaf-spot diseases in check.

GRAPES.

1. Spray before buds break in the spring, with copper sulfate.

2. Spray just before blossoming with Paris green Bordeaux.

3. Spray after fruit has set, with Paris green Bordeaux.

4. Continue spraying every ten days up to July 1, with Bordeaux mixture.

5. Spray three times from the first of July to the middle of August with ammoniacal solution of copper carbonate. This last solution will not discolor the fruit for market.

These sprays, if carried out, will be sufficient to hold in check the flea-beetles, leaf-rollers, caterpillars, birds-eye rot, black-rot, downy mildew, powdery mildew, and ripe-rot.

GARDEN VEGETABLES.

Spray with the following Paris green, when the insects appear:

Cabbage for cabbage-worm; cucumbers, squash, pumpkins, and melons, for the striped cucumber-beetle; tomatoes, for the tomato-worm.

Spray potatoes with Paris green Bordeaux for the Colorado beetle and the flea-beetles, when they appear. This spray will also prevent the potato blight.

Potato scab is treated by soaking the seed potatoes in formalin (1 pint in 30 gallons of water,) for about two hours. Treated potatoes should not be placed where they will get reinfected with scab spores.

Spray any of the vegetables with soap or kerosene emulsion for plant lice and any other of the plant bugs that suck the juices from the plants. Care must be taken to reach every insect on the under side of the leaves.

GRAINS.

Oats—Smut can be successfully treated by soaking the seed 8 to 10 minutes in hot water at 132-135 degrees F., or sprinkling with formalin (1 pint in 50 gallons of water) thoroughly stirring during the process, leaving in piles for several hours, then spreading out to dry.

Corn—Smut in corn cannot be prevented by seed treatment. Use varieties of corn most exempt from attack and avoid use of fresh manure on land giving the most trouble.

Corn-worms can be destroyed only by hand-picking.

Wheat—The Hessian fly can be controlled by delaying fall planting until after October 10. Fall grazing of wheat lessens the number of pests.

Burn over all infested land in fall, winter, or spring to kill hibernating chinch-bugs. When chinch-bugs migrate from the wheat to the corn, after the former is harvested, plow a dust furrow between the two fields, and cut a few rows of corn and lay-in piles on the edge of the field toward the wheat.

Stored grain—Weevils in stored grain in tight bins, can be destroyed by use of carbon bisulfid placed in vessels on top of the grain, the latter not over two feet thick, at the rate of one pound to 100 bushels of grain.

SHADE TREES AND ORNAMENTAL SHRUBS.

All leaf-eating insects can be destroyed by spraying with Paris green the foliage they eat.

Leaf lice and other sucking insects should be sprayed with soap or kerosene emulsion.

Borers in maple and elm can be successfully treated in September, by in-

BAY STATE PLANT CO., Boston, Mass.

jecting carbon bisulfid into the burrows and stopping them up tight.

Make your sprays according to the following formulae.

FUNGICIDES.

These solutions are designed for the destruction of the fungus diseases. They can be effectual only when they reach the fungus itself. They must, therefore, cover all parts of the affected plants. The solution will not penetrate the tissues of the plant and kill the diseases on the interior, but is effectual, more as a preventive against the entrance of the disease fungus into the plant, than a curative when the fungus has established itself in the tissue of the plant.

BORDEAUX MIXTURE.

Four pounds copper sulfate (blue vitriol); 4 pounds quicklime (not air-slacked); 40 gallons water.

Dissolve the copper sulfate in hot water, or from a coarse bag suspended in cold water; slack lime separately. Dilute copper sulfate solution to about twenty gallons, into which pour the lime, diluted to about ten gallons, stirring the mixture. Dilute further now, to make 40 or 50 gallons. Stock solutions of the copper sulfate or lime, (rate 1 lb. to 1 gallon of water) can be kept indefinitely, but will not keep when mixed. After spraying, the solution left over should be thrown away.

DILUTE BORDEAUX MIXTURE.

Two lbs. copper sulfate, 2 lbs. quicklime (not air-slacked), 50 gals. of water. This is made as Bordeaux mixture.

AMMONICAL SOLUTION OF COPPER CARBONATE

Five ozs. copper carbonate, 3 pints of ammonia, 50 gallons water.

Use just enough ammonia (if strong dilute with several volumes of water) to dissolve the copper carbonate, then dilute to final volume.

COPPER SULFATE.

Three to 4 lbs. copper sulfate, 50 gallons water.

This strength can be used only as a winter spray; sometimes a weaker solution, 1 lb. to 250 gallons of water, is used on the foliage.

INSECTICIDES.

These solutions are used to destroy insects and are not effectual for the destruction of fungus diseases. Insects that chew the foliage can be poisoned through the stomach, while those that pierce the stems and leaves of plants must be poisoned from the outside. The arsenic compounds in the form of Paris green are the standard poisons to be used against the leaf-chewers, while soap and kerosene are the standard substances to use against the plant-sucking insects. Hellebore is used in the same way as arsenic compounds and is preferable to them in cases where a less violent poison is needed.

PARIS GREEN.

One pound Paris green, 3 lbs. lime, 100 gallons of water.

Hellebore may be dusted on the plants or mixed with water, 1 oz. in 2 gallons.

SOAP.

One lb. of soap, 8 gals. water.

KEROSENE EMULSION.

Two gals. kerosene, ½ lb. common soap, 1 gal. water. Dissolve the soap in hot water, add the kerosene, and churn all together until a white, creamy mass is formed which thickens on cooling. Dilute nine times before using.

LIME, SULFUR AND SALT WASH.

Thirty lbs. lime, 15 lbs. salt, 20 lbs. sulfur, 60 gals. water.

Boil for one hour in an iron kettle, and apply while fresh to dormant trees in fall or spring to kill the San Jose scale-insects.

FUNGICIDE AND INSECTICIDE.

PARIS GREEN BORDEAUX.

Fifty gals. Bordeaux mixture, made as above, 4 ozs. Paris green.

Mako up when ready to use. It will not keep.

Congo Roofing.

Congo, the never-leak roofing advertised elsewhere in these columns, has an excellent reputation to back up its name.

It is thoroughly water-proof, wind-proof and frost-proof. It never loses its pliability and is practically indestructible. It comes in one-half, one, two and three ply, and every kind of a building from chicken-coops to railroad stations, can be satisfactorily roofed with one or another of these grades.

No one who intends to do any roofing this spring should fail to see a sample of Congo. The makers will send you sample and booklet on request.

TO GIVE AWAY—50 Buff Orpingtons and 50 Buff Leghorns to Shawnee county farmers. Will buy the chicks and eggs. Write me. W. H. Maxwell, 921 Topeka Ave., Topeka, Kans.

BARRED AND WHITE PLYMOUTH ROCK EGGS, \$2 per 15, \$5 per 45. Hawks and Bradley strains, scoring 93½ to 94½. Mr. and Mrs. Chris. Pearman, Ottawa, Kans.

WHITE WYANDOTTES—Choice cockerels, pullets or hens for sale cheap. S. W. Artz, Larne, Kansas.

BLACK LANGSHAN EGGS—from birds scoring from 93½ to 95½. \$1.50 and \$2 for 15 eggs. Wm. C. Knapp, Pleasant Hill, Mo.

FOR SALE—Choice S. C. B. Leghorn cockerels, \$1 each. J. N. Sheldon, Route 1, McPherson, Kans.

The Poultry Yard

Poultry Notes.

At the annual meeting of the American Poultry Association held recently at Cincinnati, Ohio, Grant M. Curtis was elected president and T. E. Orr re-elected secretary and treasurer. Several new breeds were admitted to the Standard, viz., Rose Comb Rhode Island Reds, Columbian Wyandottes, Rose Comb White, and Single Comb Black Orpingtons.

Three judges have already been engaged for the next State Poultry Show, January 7 to 12, 1907, viz., Chas. McClave, New London, Ohio; D. T. Heimlich, Jacksonville, Ill.; and A. B. Shaver, Lanark, Ill. These gentlemen have a National reputation as experts in judging poultry. Mr. McClave has been president of the American Poultry Association, the highest honor in poultrydom, and all were judges at the World's Fair. Owing to the favorable outlook for a bigger show than ever, it may be necessary to have another judge. An effort will be made to get the breeders of the leading varieties of fowls to contribute towards a special purse to be offered to their breed. The secretary has already authorized A. H. Miller, of Bern, Kans., to take care of the interests of the Barred P. Rocks and will shortly appoint breeders of other varieties to look after their breeds. By working in unison we can get up a big show.

This is the time of year when siting hens are in demand, but, as usual at this period, they are a scarce commodity. Their scarcity, however, can be overcome by the purchase of a good incubator, of which there are several on the market.

One good thing about the incubator is that it is always ready to set, no matter how cold or severe the weather, and it would seem to be a matter of economy as well as convenience for every poultry-raiser to purchase one, and allow the hens to lay eggs and thus get rid of the necessity of a sitting hen.

A Farmers' Institute Talk on Commercial Poultry Culture.

The poultry industry is one of great importance, and one at which many fail because they do not count the cost. They start in it in a haphazard sort of way, not knowing the amount of capital necessary to start and maintain a successful plant. The person who is successful is the one who counts the cost beforehand, and who knows just how much he has to invest. Then he makes up his mind as to whether he is adapted to the work, whether he has patience to work and wait for returns, and whether he really loves fowls. For a successful person knows that unless he is suited to his business and loves it well enough to give it undivided attention, it will never be a success.

After studying these questions and conditions, and finding that he has suf-

POULTRY BREEDERS' DIRECTORY

BARRED ROCKS EXCLUSIVELY—Left strain. Large, heavy boned, fine, clear; Barry's first-class birds, \$1 to \$6 each. Satisfaction guaranteed. Write for catalog to Lawndale Poultry Yards John D. Ziller, Hiawatha, Kans.

EGGS—S. C. White Leghorn, exclusively. Blue Ribbons at Great Bend, Emporia, Wichita; 15 for \$2. W. C. Watt, Walton, Kans.

LOOK HERE—TRY me on the big-boned Black Langshans, scoring from 90 to 95%. Charles Leeper, Harper, Kans.

WHITE WYANDOTTE COCKERELS, (Stay White) \$1 to \$5 each. Eggs, \$1.50 per 15. S. W. Artz, Larne, Kans.

MA MAMMOTH Bronze Turkeys, Silver Laced Wyandotte cockerels for sale. Address Francis Long Madison, Kans.

MAMMOTH BRONZE TURKEYS for sale. Inquire of Mrs. T. M. Flemine, Fontana, Kans.

SINGLE COMB WHITE LEGHORN cockerels \$1 each; two or more 80 cents each. Fine white geese, thoroughbred birds. Also a few Barred Plymouth Rocks, barred to the skin, fine, pure and vigorous; hens, cockerels, cocks and pullets, \$1 each; two or more, 80 cents each. All of our customers are very well pleased. We will make reductions on large lots. Meadow Poultry Farm, Conifer, Ill.

FOR SALE—150 B. P. R. and W. P. R. cockerels and pullets; strong, vigorous, cockerels, \$2 to \$6; pullets, \$1 to \$2.50. Exhibition cockerels matter of correspondence. Mr. and Mrs. Chris Bearman Ottawa, Kans.

BROWN CHINA GESE, Indian Runner Ducks also Barred Rock Cockerels. Prize winners at State Poultry Show.

O. C. Schrister, Meriden, Kansas

MAMMOTH BRONZE TURKEYS for sale. Young toms and pullets, healthy and well-bred stock. Inspection and correspondence invited. Address J. E. Miller, Burdette, Kans.

LIGHT BRAHMAS More prizes than any breeder in the state; 10 firsts this season. Eggs, \$1.50. Cockerels, \$2 to \$4. T. F. Weaver, Blue Mound, Kansas

High Class Buff Leghorns and Barred Plymouth Rocks

We furnish as good stock as any breeder in the world. Exhibition stock a specialty. Write for prices to S. O. LINNEGREN, McPherson, Kans.

Buff Orpingtons S. C. Pure Bred, Cook Strain

Eggs for setting, \$2 per 15. Order now. My stock is from Wm. Cook & Sons, originators.

F. V. Turner, Sabetha, Kansas

Barred Plymouth Rocks

Exclusively—"Superior Winter Laying Strain," noted for size and quality. Seventeen years of careful breeding. Eggs, 15 for \$1; 30 for \$1.50. E. J. Evans, Route 4, Fort Scott, Kans.

R. C. Rhode Island Reds

At the State Poultry Show, Topeka, Kansas, January, 1906, won first and second prizes on cock, cockerel, hens, pen; fourth on hen and pullet. Cockerels all sold. Eggs for hatching, \$1.00 to \$3.00 per 15. Egg circular free. NO STOCK FOR SALE.

A. D. WILLEMS, Inman, Kans.

PRIZE-WINNING S. C. BROWN LEGHORNS

Exclusively. (Short's strain.) Pullets and Cockerels for sale. Pullets scored 93½, Cockerels 92½. Eggs for sale.

MRS. W. O. MAGATAGEN, BEATTIE, KANS.

Mention KANSAS FARMER when writing.

BLACK LANGSHANS

Bred by John Shank, New Cambria, Kansas.

Stock and eggs for sale. Eggs, \$2 per 15.

Fancy Black Langshans

G. C. MILLER, Breeder.

Stock for sale. Fifteen eggs for \$2. Address

546 Missouri St., LAWRENCE, KANS.

We Pay the Freight

East of the Rockies.

Here's an offer never before equalled. The famous

Royal Incubator

sold on trial, freight prepaid. Guaranteed in every way.
Automatic control of heat and ventilation. Perfect hatching
assured. Doubles your poultry profits. Don't pay more for
similar and poorer incubators. Get the best at freight-
paid bargain prices. Investigate before you buy. Fine cat-
alog of incubators, brooders, poultry and all supplies free. Booklet
"Preparation and Feeding of Chicks," 16c. Sixty-page paper one yr. 10c.
Royal Incubator Co., Drawer 66, Des Moines, Ia.

AND ALMANAC FOR 1906.

There is nothing in the world like it. It con-
tains 22 large pages, handsomely illus-
trated. A number of most beautiful colored
Plates of Birds true to life. It tells all
about all kinds of Thoroughbred Fowls,
with life-like illustrations, and prices of
same. It tells how to raise poultry successfully, and how to
treat all diseases common among them. It gives working plans
and illustrations of convenient Poultry houses. It tells all about
Incubators and Brooders.

It gives full instructions for operating all kinds of Incubators.
This chapter is marvelously complete, worth dollars to anyone
using it. It gives descriptions and prices of Incubators,
Brooders and all kinds of Poultry Supplies. In fact, it is
an encyclopedic handbook and will be useful to anyone
receipt of only 15 cents. Your money returned if not pleased.

istered stock for sale. Emporia, Kansas, W. H.
Richards, V. S., Emporia, Kansas.

ficient capital and is suited to the busi-
ness, he then enthusiastically sets to
work to start his ranch. In the selec-
tion of his birds he uses great care,
for he knows just the kind he likes
best. If it is an Asiatic, Mediterranean,
American, or English class, he knows
which he likes best and studies their
habits and wants. After he has selected
the kind of bird he wants, he studies
its wants, habits and requirements
in order to achieve the best results.

In the selection of his poultry ranch,
the successful man does not look up at
the skies, or surrounding country, and then say: "This is a fine place for my
chickens;" but he studies the country,
climatic conditions and so on, before he
decides. The man who studies the habi-
ts of fowls, will know what they want
and how many to put in a colony—that
is, if he separates them, and he must
do that in this country, and he will
know how many to put in a colony. Few
people think that two hundred
hens might be crowded on two acres,
but it is true nevertheless. It is not
so much the amount of ground as the
conveniences for the hens. There may
not be sufficient shade, dust baths,
roosting places, or water for all, and
it is necessary that all these things
be made to suit the convenience of the
number of hens, regardless of the num-
ber of acres. I know a farm where
two hundred hens run on seven acres,
and yet are crowded, for they have not
sufficient conveniences. Few have a
place to dust at all, few ever bathe, and
there are roosts for only about forty,
when there are two hundred.

Among the conveniences necessary
for poultry must be mentioned the dust
baths. When a hen is happy she wants
to fix her toilet, and she wants to dust
herself. If you do not think a hen
wants to dust herself, just open the
garden gate after you have hoed your
lettuce bed and watch "Biddy" go for
dust; therefore, the successful man
keeps dust pans for his hens. He
should occasionally dampen this dust
pan, for the dust accumulates and a
happy hen wants to remove this. Af-
ter a shower, you have seen hens make
for the water. They stay in it a little
while and then shake themselves thor-
oughly.

Next is shade. A hen requires it,
not entire shade. You have, I know,
seen little chickens in partial shade;
they like to lie under trees where the
sun comes through the branches.

The kind of house necessary is another
important item on the ranch. The
successful man knows just the kind of
a house necessary for hens, how large
it must be. For if a hen is crowded
and passes an unsatisfactory night, it
is readily told in her egg record. If
you neglect her, she will as surely neg-
lect you as that she and you are alive.
Therefore the house and roosts must be
made to suit the convenience and com-
fort of the flock. Then the sanitary
condition of his flock is a matter of
importance. He knows just what to
use to keep his house and his birds in
a sanitary condition, and he is not
afraid to do what he knows is for their
good—and what man can look an hon-
est hen in the face. If everything about
the place is filthy. Hence he must keep
things in a sanitary condition; it is
just as essential as food.

Now comes the question of food, and
it is a question that puzzles most of
us. The other day I read an advertise-
ment, judging from which, if you did
not buy that particular food, your chick-
ens would never lay another egg. But
do not be worried if you can not afford
to get these things, for bran is an ex-
cellent feed for them, especially so if
one has milk to dampen it with—it is
even better if dampened with water, as
it seems to swell before feeding. I
have used all kinds of food, balanced
rations, and all that sort of stuff, but
prefer bran. Let us be honest with
ourselves, for the successful man knows
better than any one else what his hens
want—therefore the successful man
knows how to feed his fowls. Now,
take the question of milk, that is, clab-
ber. It is one of the very best foods
one can give hens, for one can not af-
ford to lose any food, but conserve it as
closely as the good housewife. He
takes it and makes a mash, and in this
way he gets the most out of it. Now,
a mash, if you understand how to make
it, when it is mixed with the milk, is
the best way to use the clabber, as in
this way they get it all. I have a kind
of food very much like Midland, except
it has more bran and less meat meal, so
I can mix more milk with it. Then as
to grain foods for chickens, their dig-
gestive organs are such that they get
the most out of grain; hence if you
have only grain and green stuff, do not
be afraid to feed it. Of course it is
better to have change and to have milk

Dairy Interests

Suggestions for Construction of a Modern Dairy Barn.

FROM THE DAIRY DIVISION, BUREAU OF ANIMAL INDUSTRY, U. S. DEPARTMENT OF AGRICULTURE.

The plan is designed for 24 cows, and allows ample room for calf pen and box stalls for bull and cows; also space for feed-room, hay chute, wash-room, and silo.

In presenting this plan it is not intended to insist that the arrangement shown is the only satisfactory one, but the idea is to present some important features that are often overlooked by the builder and which are vital to a well-planned structure.

The amount of space allowed for the various purposes named on the plan is thought to meet the requirements so far as the square feet of floor space is concerned. The arrangement of the space can be adapted to the needs of the particular location.

SPECIAL FEATURES TO ALL WELL-PLANNED BARNES.

Size.—It will be noted that the width on the plan is 36 feet 4 inches outside. There are two main reasons for adopting this width, first, it allows ample room for the stalls and passageways, and, second, it permits of the most economical use of lumber in building.

While the length here shown is 84 feet 9 inches, this feature is wholly

dependent on the number of cows the dairyman wishes to handle. The side walls are built of stone or concrete up to the window-sills, the balance of the walls being frame. The end walls are constructed of stone or concrete up to the ceiling. A partition extends across the barn, so that the cow stable can be entirely shut off from the other section. This is considered a strong point in this plan.

Posts and joists.—The posts carrying the upper floor are 6 by 6 inches, the girders 10 by 12, and joists 2 by 12. If yellow pine is used, the joists may be spread 24 inches between centers, but if hemlock is used, the distance should be reduced to 16 inches.

Windows.—One of the weakest points in barn construction is the small amount of window space usually allowed. The space in this plan provides approximately 6 square feet for each cow. It will be noted from the elevation that the windows are sliding sash, making them nearly twice as high as they are wide. This arrangement will admit much more light than the same space would if the windows did not extend to the ceiling. A common error is to make the windows too low.

Stalls.—The plan shows a width of stall of 3 feet 6 inches, which is as narrow as should be allowed. This width also fits into the construction better than any other. The depth is indicated as 4 feet 10 inches. This may be varied according to the size of the cows in the herd by increasing the depth of the stalls and decreasing the width of the alley behind, or vice versa. Manure gutter should not be less than 16 inches in width and not over 4 inches deep.

Manger.—The manger is planned to be 2 feet wide and 6 inches deep, with slightly rounding bottom, the bottom being 2 inches higher than the floor of the stalls.

Floor.—The entire floor is concrete 6 inches in depth when finished. We consider concrete the best material for a floor for several reasons: (1) It is the only material that is sanitary; (2) it is economical because of its durability; (3) when a reasonable amount of bedding is used it is comfortable to the

animals and no bad effects result. The floor is intended to be raised about 1 foot above the level of the ground to insure drainage.

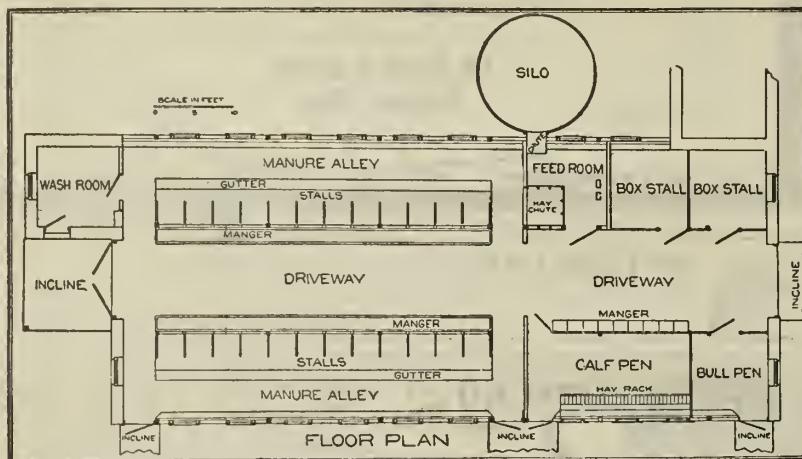

Alleys.—The alleys behind the cows are 4 feet wide; these give ample room for the passage of the manure trucks. It is designed to take the manure not only out of the barn, but away from the barn and deposit it in a manure shed or on the field. It is undesirable from the standpoint of construction to have a manure pit under the stable, for the reason that a concrete floor can not successfully be put on wooden joists, and steel joists are expensive. It is also unsanitary to have the manure cellar under the floor.

Calf pen.—This should be a feature in every well-planned dairy barn. The one shown is 21 by 11 feet, with manger on the front for feeding grain and hay-rack along the back wall. Individual stanchions are provided for feeding calves grain and milk.

Bull pen and box stalls.—These are approximately 10 by 10 feet, which is considered ample size for this purpose. There is a full window in each stall providing an abundance of light.

Feed room.—This is centrally located; a chute from the silo enters into it, also two grain chutes from the upper floor. The feed room is large enough for storage of trucks necessary to carry grain and silage. A hay chute from the loft above deposits the hay in the feeding alley.

Wash room.—No dairy barn is complete without a wash room for the milkers and barn attendants, and lockers for their clothes. It should also

FLOOR PLAN OF MODERN DAIRY BARN.

contain a small boiler for providing hot water and steam, as this is a necessary part of the equipment of a modern barn. Milk scales, record sheets, milk stools, etc., may also be kept here.

Watering.—Watering devices may be put in at the option of the builder and are necessary feature of a modern dairy barn.

Silo.—A silo is provided in the plan at a convenient location for feeding the silage. The silo planned for this barn is 16 feet in diameter and 28 feet high, and has a capacity of about 110 tons. This will provide silage for 24 animals for six to eight months.

GENERAL VIEW OF INTERIOR OF BARN.

The illustrations show the construction of walls, floors, and partitions, also location of doors and arrangement of stalls. The stalls are so designed that

Washed in 1 minute

Count the pieces—notice the difference—and you'll understand why the one who has to do the cleaning prefers the simple Sharples Tubular.

There are other advantages just as much in favor of the Tubular. Write today for catalog V-165—it tells you all about the gain, use, and choice of a separator.

The Sharples Separator Co.
West Chester, Pa.

Toronto, Can.

Chicago, Ill.

Washed in 15 to 30 minutes

A Big Difference

One Minute's Washing as compared to at least fifteen. Wouldn't you like to save at least fourteen minutes twice a day? One minute with a cloth and brush cleans the absolutely simple Sharples Dairy Tubular Cream Separator bowl shown in the upper picture. It takes fifteen minutes to half an hour with a cloth and something to dig out dents, grooves, corners and holes to clean other bowls—one of which is shown in lower picture.

Cream is Cash

AT

The largest exclusive Cream Butter Factory in the World

NO WAITING

NO DELAY

NO RISK

NO UNCERTAINTY

NO ANXIETY.

Cream shipped to us is paid for immediately.

Our motto is:

CORRECT WEIGHT,

HONEST TEST,

and the highest possible price for butter-fat.

Under this banner we have established an enormous business.

Through a continuation of this policy, we expect to increase our business each month.

A cordial welcome awaits every enterprising milk-producer, who appreciates having his product handled economically so as to get the greatest returns and that in cash.

It's a pleasure to answer letters. Will be glad to hear from you.

Very respectfully,

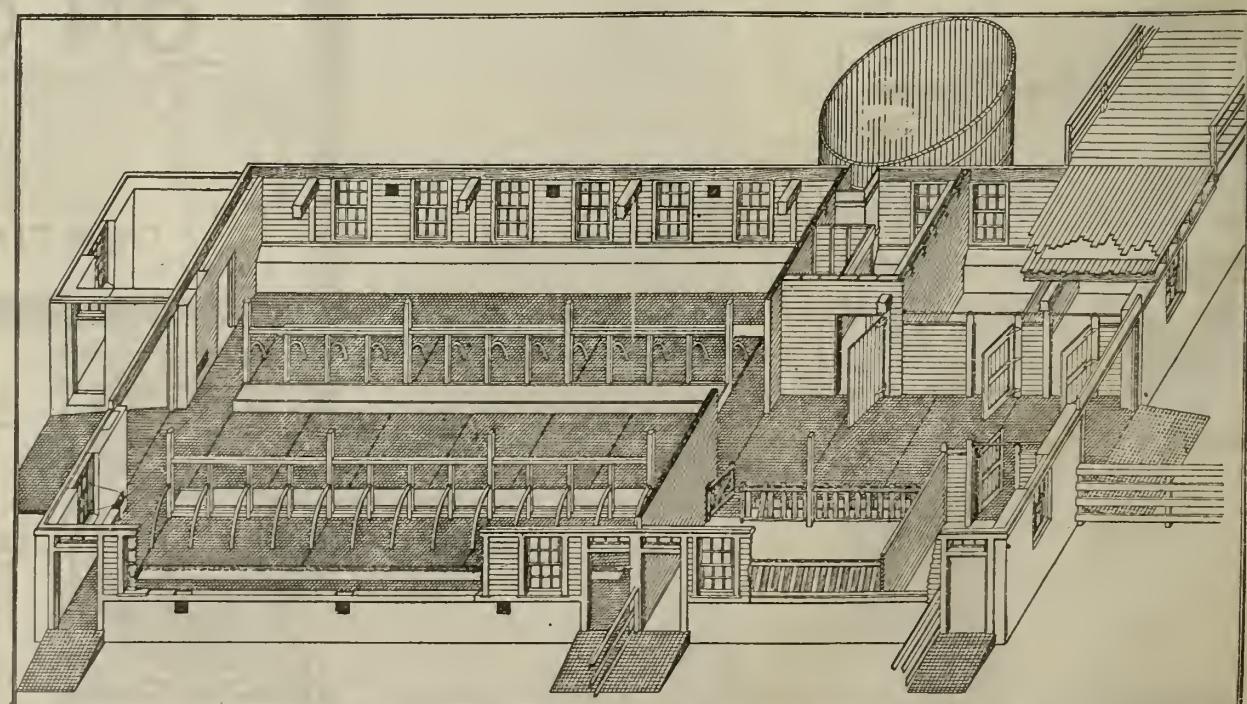

**BLUE VALLEY CREAMERY CO.,
ST. JOSEPH, MISSOURI.**

stanchions or chain ties may be used. Builders who desire to use patent stalls will find the arrangement of gutter, platform, and feed manger applicable to their use.

Storage of feed.—There is no objection to storage above the cow-stable

proper, so long as the floor is constructed similar to the one in the drawing; that is, a double floor with paper between, the upper part being made of matched lumber.

Ceiling.—In colder climates it is deemed better to have a comparatively

GENERAL VIEW OF INTERIOR OF BARN.

low ceiling on account of temperature, and this construction admits of changes in this respect.

Ventilation.—The plan adapts itself to any system of ventilation. The openings shown give a suggestion as to where the fresh air may be taken in and the impure air discharged.

Driveway to second floor.—This is located on one side of the barn, at the end. The main reason for locating the driveway at this point is because it does not shut out any light from the floor below. Too often the driveway is placed in the center of the barn, where it covers a large area, which should be left free for windows.

Cost and Profit of Dairying.

[From Hoard's Dairyman—Continued.]

Herd No. 71—Contains 11 native cows.
Yield of milk per cow per year, lbs. 2553
Yield of butter fat per cow per year, lbs. 94
Net returns from the creamery per cow \$19.74
Cost of keeping cow per year 23.00
Net loss on butterfat per cow per year 3.26

The feed was as follows: Pasture—\$6; roughage—mixed hay and fodder corn—\$11; grain—bran—\$6.

The herd was well housed. The owner does not read dairy papers.

Herd No. 72—Contains 13 grade Shorthorn and 2 Holstein cows.
Yield of milk per cow per year, lbs. 4490
Yield of butterfat per cow per year, lbs. 164
Net returns from the creamery per cow 34.44
Cost of keeping cow per year 27.00
Net profit on butterfat per cow per year 7.44

The feed was as follows: Pasture—\$6; roughage—wild hay and corn fodder—\$11; grain—oats and cornmeal and bran—\$10.

The herd was well housed. The owner reads dairy papers.

Herd No. 73—Contains 10 grade Shorthorn and 1 Holstein cow.
Yield of milk per cow per year, lbs. 3121
Yield of butterfat per cow per year, lbs. 106
Net returns from the creamery per cow \$22.26
Cost of keeping cow per year 27.00
Net loss on butterfat per cow per year 4.75

The feed was as follows: Pasture—\$6; roughage—mixed hay and corn fodder—\$11; grain—oats and corn-and-cob-meal and bran—\$10.

This herd was but fairly well housed. The owner does not read dairy papers.

Herd No. 74—Contains 15 grade Shorthorn cows.
Yield of milk per cow per year, lbs. 2854
Yield of butterfat per cow per year, lbs. 112
Net returns from the creamery per cow \$23.52
Cost of keeping cow per year 20.00
Net profit from butterfat per cow per year 3.51

The feed was as follows: Pasture—\$6; roughage—mixed hay and fodder corn—\$11; grain—ear corn—\$3.

This herd was fairly well housed. The owner reads dairy papers.

Herd No. 75—Contains 10 grade Shorthorn cows.
Yield of milk per cow per year, lbs. 1945
Yield of butterfat per cow per year, lbs. 69
Net returns from the creamery per cow \$14.49
Cost of keeping cow per year 25.00
Net loss on butterfat per cow per year 10.51

The feed was as follows: Pasture—\$6; roughage—mixed hay and corn fodder—\$11; grain—ear corn—\$8.

This herd was poorly housed. The owner does not read dairy papers.

Herd No. 76—Contains 6 grade Shorthorn cows.
Yield of milk per cow per year, lbs. 3848
Yield of butterfat per cow per year, lbs. 137
Net returns from the creamery per cow \$28.77
Cost of keeping cow per year 25.00
Net profit from butterfat per cow per year 3.77

The feed was as follows: Pasture—\$6; roughage—mixed hay—\$10; grain—ear corn—\$9.

This herd was well housed. The owner reads dairy papers.

Herd No. 77—Contains 7 grade Shorthorn cows.

Yield of milk per cow per year, lbs.	2490
Yield of butterfat per cow per year, lbs.	92
Net returns from the creamery per cow	\$19.32
Cost of keeping cow per year	20.00
Net loss from butterfat per cow per year	.68

The feed was as follows: Pasture—\$6; roughage—mixed hay and fodder corn—\$14.

This herd was only fairly housed. The owner does not read dairy papers.

Herd No. 78—Contains 11 native cows.
Yield of milk per cow per year, lbs. 5171
Yield of butterfat per cow per year, lbs. 200
Net returns from the creamery per cow \$42.00
Cost of keeping cow per year 29.00
Net profit from butterfat per cow per year 13.00

The feed was as follows: Pasture—\$6; roughage—mixed hay and shredded corn fodder—\$11; grain—oats and cornmeal and bran—\$12.

This herd was well housed. The owner reads dairy papers.

Herd No. 79—Contains 5 high-grade Shorthorn cows.

Yield of milk per cow per year, lbs.	4412
Yield of butterfat per cow per year, lbs.	164
Net returns from the creamery per cow	\$34.44
Cost of keeping cow per year	25.00
Net profit from butterfat per cow per year	9.44

The feed was as follows: Pasture—\$6; roughage—mixed hay and shredded corn—\$12; grain—bran and beets—\$7.

This herd was well housed. The owner reads dairy papers.

Herd No. 80—Contains 7 native cows.
Yield of milk per cow per year, lbs. 8501
Yield of butterfat per cow per year, lbs. 313½
Net returns from the creamery per cow \$65.85
Cost of keeping cow per year 28.00
Net profit from butterfat per cow per year 37.85

The feed was as follows: Pasture—\$6; grain with pasture—\$2; roughage—mixed hay and corn fodder—\$10; grain—oats and barley meal and bran—\$10.

This herd was well housed and kept in barn at all times during winter months. The owner reads dairy papers.

Below may be found the returns per cow for each dollar invested in feed:

No. Herd

71	\$.86
72	1.27
73	.82
74	1.17
75	.58
76	1.15
77	.97
78	1.45
79	1.38
80	2.35

Comparing the best and poorest herds of this group results as follows:

Butterfat	Pro-	
No. 80, milk, lbs., 8501	313½	ceeds,
No. 75, milk, lbs., 1945	69	*10.51

Difference, milk, lbs. 6556 244½ \$48.36

*Loss

Again, comparing the best and the average of all, results as follows:

Butterfat	Pro-	
No. 80, milk, lbs. 8501	313½	ceeds,
All, milk lbs. 3431	126½	2.00

Difference, milk, 5070.. 187 \$35.85

Of this group of herds it may be said that for each dollar invested in feed, four sustained a net loss of 20 cents. The remaining six herds made a net gain of 29½ cents. Of the herds sustaining loss, the owner of but one reads dairy literature. Of the profitable herds the owner of but one does not read dairy papers.

A Davis

Cream Separator direct from factory at factory price, costs half as much as most others. No agents' fees to double price. Investigate our liberal selling plan and the simple three piece bowl machine. Get every drop of cream. Tank 3 feet 7 inches high. Write for money saving catalog No. 126.

Cleveland Cream Separator

The Only High Grade Separator Sold at a Reasonable Price.

Easy Running Because:

The Cleveland is the only all ball-bearing separator made. To compare ball-bearings with any other bearings made is like comparing bicycile with a grind-stone.

Durable Because:

The Cleveland has the fewest parts of any separator made in the world. The fewer parts in a separator the less wear—the less repair.

Easy to Clean Because:

The fewest parts and the Cleveland skimming device made of aluminum. We were the first

Direct to You.

to apply this wonderful metal to this use. It is non-corrosive, non-poisonous, has no coating to wear off and milk will not stick to it.

The Selling Plan:

30 days approval test in your own home under your own conditions. You don't need to take our word. Try a Cleveland, the guaranteed perfect skimmer. It won't cost you a cent to be sure. You try one in your own home without putting up one cent in advance. The new free catalog tells you how. Write for it.

The Cleveland Cream Separator Co. Dept. A, 34 Michigan Ave., N. W., Cleveland, O.

GIVE YOUR COWS A SQUARE DEAL

The owner of but three, four or five cows as a rule keeps them simply for the purpose of supplying the home table with milk, cream and butter. He claims it does not pay to keep cows for the dollars and cents they will earn. Why he makes this claim is only because he has never given the cows a "square deal". It is a case of the pot calling the kettle black. The cows are well fed, milked daily and the milk set away in crocks or pans for the cream to rise by natural processes. Here is where the cow receives her bad reputation. From twenty to fifty per cent of the cream never rises and is thrown away with the skimmilk. This twenty to fifty per cent of lost butter represent a snug little sum at the end of the year,—all lost. Just thrown away, and the cow is considered unprofitable. A

DE LAVAL CENTRIFUGAL CREAM SEPARATOR will stop this waste and at the same time produce purer and sweeter cream from which butter can be made that will sell for from five to ten cents more per pound than the gravity skimmed product. In addition the skimmilk is left fresh and warm for the calves. Are not such savings as this worth investigating? Our illustrated catalogue of DE LAVAL machines is sent free upon request. Write for it today and learn the many benefits and advantages to be gained by the use of a DE LAVAL machine.

Take Care

You Can't Afford to Make a Mistake

In Buying a Cream Separator

Of course you want the separator that will give you the best results. Don't make a mistake, then. Investigate before you buy. We claim and ask the chance to prove to you that the

OMEGA CREAM SEPARATOR

is more easily turned; more quickly, easily and thoroughly washed; requires fewer repairs and produces cream of a better quality than any other separator ever made.

Its superiority lies in its construction; it is the only cream separator made whose bowl is supported at both top and bottom—giving absolutely smooth running without vibration; the only separator which delivers both cream and skim milk from the bottom of the bowl; the only bowl which drains itself; the only bowl which can be stopped instantly; the only bowl which does not whip the cream and break the globules of butter fat.

We are so sure that any intelligent man or woman can see the Omega's superiority that we ask the privilege of setting one up for you on your own place. Try it and test it in every way and if you do not find it superior to any other—if it is not perfectly satisfactory to you—to be the sole judge—we will not ask you to keep it. That's a fair offer. Don't you think it will pay you to find out more about this separator for which so much is claimed? Send for catalog, at any rate.

This Book Free to You. New book, "More Milk Money," tells how to care for separator cream; how to make good butter; how to select good dairy cows; how to prevent white specks in butter; how to wash and work butter and a hundred other things you ought to know. Ask for it. Free if you mention this paper, tell how many cows you keep and give address of a neighbor who keeps cows.

The Omega Separator Company.

23 Concord St., Lansing, Mich.

Thick Cream

SELLS FOR ONE CENT MORE PER POUND THAN THIN CREAM

The creameries of the country have become so convinced of the increased value of thick cream over thin cream that many of them are paying one cent per pound more for cream testing 80 per cent. and over than for that testing under 80 per cent.

The reasons for this are—

First—Thick cream makes better butter because it contains less milk and therefore keeps in better condition.

Second—Thick cream is so much less in quantity that the cost of transportation is less.

It is much better for the dairyman to make thick cream because he has more skimmed milk left at home to feed calves—it then follows that dairymen should buy only such separators as can separate thick cream.

The U. S. Separators

Lend the World in this particular

Beware of the cheap and poorly constructed Separators that cannot make thick cream. They would be expensive even if furnished without cost.

VERMONT FARM MACHINE CO., Bellows Falls, Vermont. 18 centrally located distributing warehouses throughout the U.S. and Canada.

A Farmers' Institute Talk on Commercial Poultry Culture.
(Continued from page 229.)

for them, but if you have not, remember they will do well on this sort of a diet.

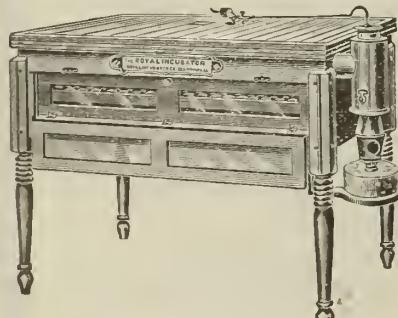

The successful man knows diseases and their symptoms, and being so much with his birds, is sure to detect the first sign of trouble. Should "Biddy" take the roup, he knows it, and immediately separates her from the remainder; the same of cholera, liver complaint, etc. In treatment, he knows what to do. Sometimes in roup they may last over twenty-four hours, or if they have the roup with the dyspeptic touch, they die at once. Sometimes it is the very choicest bird, probably it is one for which he paid \$10 or \$15; but whichever it is, he knows the only thing to do is just to take it out and kill it, and then watch out for others. If he is up against it, he does not get discouraged, but takes into consideration that bad luck may come to all of us at some time. Remember that after a full meal, the Indian girds up his belt and starts out after a deer. If he goes all day without finding a deer, he then girds his belt a little tighter and runs on, it may be several days before he stalks one, but he does not give up, only girds his belt a little tighter and keeps on until he does find one. So it is with the man who succeeds in any business—if disappointments overtake him, he just takes a hook in his belt and goes on. This reminds me of a man who once told me, "You are not in it"—and went up in an alfalfa place and opened a plant. He hatched out some fine birds and lost none of them. This gave him room to boast "That he would show people how to do business in the right way." Then he hatched out more, but lost every one of them. After this he said bad luck had struck him and he soon sold out and went to teaching school. No system, just a haphazard way of doing business.

The practical breeder knows what it costs to produce an egg, he has a record of all his pens, number of hens in each, how each is doing, how old each hen is, knows the ones that lay and the ones that do not. If he has a pen that is not laying, he watches and takes out those that do not lay and puts them in the fattening pen. If it were not for the record, how could he tell which were laying? Another thing, he always feeds at the same hour; if not, the birds will be treading on one another; he uses a certain measure and feeds the same amount; if they are indifferently anxious, he gives them about what they will eat clean.—W. C. Stevens, in Live Stock Tribune.

The Royal Incubator at \$12.75.

These are days of low prices among incubator people, but a machine that seems to go just a little beyond anything else in the way of a bargain is this 230-egg No. 3 Royal at \$12.75.

It is a double walled, self-regulating machine with all the appliances and devices, in finest working order, of the very highest-priced machines. Its weight is 140 pounds, and we have the

word of the manufacturing company that they really consider that in selling this 230-egg Royal at \$12.75, they are offering "the best incubator proposition that has ever been made by any incubator company in existence."

The Royal has been one of the most popular incubators before the public for years. It enjoys the enviable reputation among poultrymen of being the one really high-class incubator that has always sold at a popular price.

If you want an incubator bargain you can not do better than get in touch at once with the Royal Incubator Company, Drawer 66, Des Moines, Iowa. They will send you their catalogue free. Enclose ten cents with your request and they will send you their valuable little book on "Proper Care and Feeding of Chicks, Ducks, and Turkeys."

An Opportunity for Beginners.

There are many families who have considered the incubator hatching of chickens, but who have never made a start in that direction on account of the expense involved in purchasing an outfit. Not knowing just how successful they would be, they have desired to be very conservative in the outlay for hatching machinery. The Geo. Ertel Co. of Quincy, Ill., gave this desire careful attention last summer, and decided that they could afford to make a very close price on a small machine, which would do good work and which would serve to introduce their goods to users, who, making a success of the

small machine, would certainly want a larger one in time. By careful figuring on the manufacture of such a machine in large quantities, they decided that they could get the price down to \$7.90 for the incubator delivered anywhere east of the Rocky Mountains, and that it would be possible to include the brooder for a delivered price of \$11.50. On account of the high freight rates, the prices to points west of the Rocky Mountains have to be a little higher. They have thousands of these machines all crated and ready to ship, and those who have seen them say they are an up-to-date machine which will certainly do good work. This machine is made in one size, 100-egg capacity, and is an improved form of the Hatching Wonder which they have sold for a number of years, and with which, doubtless, many readers of the KANSAS FARMER made their start in chicken-raising.

How Long Should an Incubator Last?

Neither the case, the doors, the inside packing nor any of the structural parts of an incubator are subject to appreciable wear. Yet we find that many a man has laid aside his incubator, calling it "worn out." It seems a pity that so many good machines should thus be discredited, when a remedy is so close at hand, applicable to every machine, no matter of what make.

The great trouble with most of the above incubators is that the vital parts—regulator, thermostat, lamp and heating system, do their part for only a short period. They are often flimsy, cheap substitutes for the real parts they represent.

The faulty parts can be readily replaced by the reliable, durable "Acme" goods made by the H. M. Sheer Company, Quincy, Ill.

The Acme Wafer Thermostat is the only perfect thermostat on the market; has stood the test of time and usage. Their patented valve and filler is the keynote to its wonderful efficiency. All of their regulators are equipped with this wafer, making them sensitive to a fraction of a degree, controlling the temperature automatically, and requiring but one adjustment. Their action being almost human.

Their new catalogue just from the hands of the printers, gives full description, prices, etc., of their large and complete line of supplies. It also contains the complete illustrated plans, enabling any one to build the Famous Peerless Incubators and Brooders; so clearly described and illustrated a boy of 10 years old can follow them. They are free, together with their catalogue. Send for them to-day. They are worth \$2 to any one interested in artificial incubation. Address, H. M. Sheer Co., Quincy, Ill.

"A Sturdy, Yellow Puff-Ball—His Mother Was a Hatch-All."

That is the legend on the title page of a newly written, 80-page incubator catalogue just off the press. A fluffy, happy chick, backed up by two of his brothers makes an appropriate illustration for the "Hatch-All" Incubator catalogue. Inside, the whole eighty pages are interesting, instructive, profitable to every poultry-raiser. There are over sixty half-tone illustrations reflecting nearly every phase of the poultry industry. The double half-tone (pages 36 and 37) illustrating "How I made money on a town lot" shows a thrifty flock of white Wyan-dottes in their own surroundings. They are a lot of beauties. The article is written by Mrs. Wagner, a Nebraskan. Every poultry-lover ought to send for this book if merely to own this handsome, double-page illustration. There are a score of valuable, money-making features about this catalogue. It explains in full the value of the "Hatch-All" incubators and brooders, their heating systems, ventilation, regulators, lamps, etc. These are fully illustrated in half tone. It explains how the Hebron Incubator Co. send their machines, freight prepaid, saving buyers trouble, annoyance, expense. An extended article details the proper methods of running an incubator, how to avoid mistakes and loss through lack of experience. Space is too limited here to tell all about this well-written piece of incubator literature. I urge every reader and keeper of poultry to send to the Hebron Incubator Company, Hebron, Nebraska, for this book.

ONE WHO HAS READ IT.

A Good Little Poultry Book.

We take pleasure in directing the attention of our readers to a little book before us, entitled "Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is published by the Des Moines Incubator Company, Des Moines, Iowa, and is sold for 10 cents a copy. No reader will begrudge the small price to get the accurate, specific information which this little book contains. It is in neat, compact form, and gives directions and pointers in a way that they will be applied every day by the poultry-raiser. The different classes of fowls are treated separately. Particular attention is given to right starting, the foods that are adapted and those not adapted to the new-born fledglings. It is an especially valuable book for beginners. Old poultry raisers will get many valuable suggestions from it. A copy may be procured by sending 10 cents direct to the publishers.

In a new catalogue the Manson Campbell Co., Detroit, Mich., explains its claim to be able to produce the best possible incubators and brooders at less cost than is possible in any other factory. This catalogue is a beauty, is filled with useful information, and can be had for the asking. Mention KANSAS FARMER.

Racine, Wis., is a great place for the manufacture of agricultural machinery. Among the appliances made none is more in demand than the Bell City incubators and brooders. Send to the Bell City Incubator Co., Racine, Wis., and get a copy of "Hatching Facts;" it will give you information and entertainment on the production of the "helpful hen."

**TALK

Kansas City Hay Press Company.
129 Mill Street, Kansas City, Missouri.

The German Nurseries.

To purchasers of seeds, plans and trees the name of Carl Sonderegger and the German Nurseries is not new, but it is nevertheless not out of place to call attention to the fact that as usual Mr. Sonderegger is prepared to supply the very best in quality on his usual reasonable terms. Anything that is required in the way of apples, plums, cherries, peaches, grapes, etc., will be supplied by the German Nurseries in any quantity and the purchaser can rest assured that it will be of the satisfactory kind. For the convenience of his patrons Mr. Sonderegger issues two editions of his catalogue—one in English and the other in German. The catalogue lists a great many good things for the agriculturist and includes not only fruit-trees and small fruits but forest-tree seedlings and hundreds of choice varieties of tested seeds. Be sure and send for one of these catalogues before ordering your supply of seeds for this season's planting. Address The German Nurseries, Carl Sonderegger, Proprietor, Beatrice, Nebraska, mentioning this paper.

Coated Roofings.

Roofs generally need painting four times to one time that the rest of the building does.

Most of the Ready Roofings on the market require a coating every year or so with a special kind of paint.

Amatite, however, is a big exception to the rule. This roofing has a well-earned popularity because it never requires painting or coating. Just lay it—that's all. After that Amatite takes care of itself, needing no attention. The mineral surface is better than any paint could be.

It will be found well worth while to send for a free sample which may be had without charge by addressing the Barrett Manufacturing Company, New York, Chicago, Cleveland, Boston, Allegheny, St. Louis, Minneapolis, Philadelphia, New Orleans, Kansas City.

At the various State fairs visited by the KANSAS FARMER representatives, it was particularly noticeable that the Gee Whizz Washing Machine, manufactured at Des Moines, Ia., and now advertised in the KANSAS FARMER, was a good seller, and it was evident that it was the most popular machine on the market. We trust our readers who are interested in securing a first-class washing machine will write these people for full information about the Gee Whizz Washing Machine and mention the KANSAS FARMER.

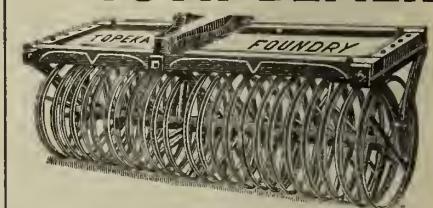

The American Galloway Herd Book, Vol. XV., is out. Its 507 pages contain an elaborate record of 1999 purchased animals numbered from 25001 to 27000, a copy of charter, constitution and by-laws of the association and a list of active members; also an index to breeders, importers, and owners of these animals. It is published at Cedar Rapids, Ia.

We call special attention to the seed advertisement of M. G. Blackman, Hoxie, Kansas, who is advertising the Great American Desert Seeds. His specialty for 1906 includes alfalfa, Kafir-corn, cane, millett, Russian Prosso, spelt, etc. Write him for catalogue and he will explain why "the desert shall rejoice and blossom as the rose."

On page 225 of this issue, we call your attention to an original ad by Frank C. Clark, one of California's largest farmers that should appeal to the reader. He has won out in farming by practicing up-to-date Middle-western methods in his own State, using his own term, an old California phrase. "By staying with the '49 and spring of '50 ways."

Among the attractive catalogues of the season that of B. F. Smith the small-fruit man of Lawrence, Kansas, is especially neat. Mr. Smith has been known as the "berry king." His extended experience in small fruits in Kansas has enabled him to concentrate his efforts on the varieties that are most profitable for either the home, garden or the commercial plantation.

The Kansas Farmer

The "old reliable" KANSAS FARMER, established in 1863, the best genuine agricultural weekly paper in the west. It solves the problems for the busy farmer. It helps and interests every member of the farmer's family. It has 12 regular departments. Its contributors are expert authorities. It contains 24 to 32 pages each week. Sent on trial three months free. Test it. Clip the coupon below.

**KANSAS FARMER COMPANY,
Topeka, Kansas.**

I accept your trial offer to new subscribers to send me the Kansas Farmer three months free. At the end of the three months I will either send \$1.00 for a full year from that date or write to stop the paper, and you are to make no charge for the three months' trial.

Name

P. O. Address.....

A "Peaches and Cream" Stallion.

Our illustration is from the "home of the winners," of Frank Iams, St. Paul, Neb. The largest individual owner and importer of black Percherons, Belgians, and Coach stallions in the United States. He imports stallions by special express train load, spends four months in Europe, selects and buys every stallion himself, direct from the best breeders. He knows the country, and how to buy "top notchers" worth "the coin." He uses his own money, owns his farms, horses and barn, has no two to ten men as partners. He saves you all commissions and middlemen's profits as he sells all his stallions at his home barns himself, and sells more stallions than any ten men in the United States. He is saving thousands of dollars to stockmen by selling "peaches and cream" stallions at \$1,000 to \$1,500. He guarantees them better than stallions sold to farmers' stock companies at \$2,500 to \$5,000 each. If you do not find this true, on a visit to his importing establishment, he will cheerfully pay you \$100 for trouble, you the judge. Iams speaks the languages; this alone saves him 20 per cent on his stallions. He is not in the great stallion trust; this saves you 25 per cent. He places \$1,000 insurance in reliable company at six per cent. His successful business of 24 years makes him a safe man to do business with. He gives every bank in his town as reference. "It's up to you;" why will you pay \$3,000 for a \$1,200 to \$1,500 stallion? Iams has "the goods" just as you read about. This cut is true to life and is "Iams' Espoir-Dragne (21653). Royal Belgian—5 years old; weight 2,140 pounds. He is a massive, big-boned drafter of smooth form, an up-to-date stallion that you are looking for; one that turns the heads of all the boys. He is a "peaches and cream" "black boy" with the "Iams" brand on him. That alone stamps him as a "top-notcher." Iams has 120 models of this type, that he is selling at \$1,000 and \$1,500, and all must be sold. Don't wait, write Iams for that "hummer" of a horse catalogue. It's the richest on earth. It will save you \$1,000 or \$1,500 and tell you where and how to buy a "top notcher." Don't take any "con salesmen's" word, visit Iams. His barns are filled to the roof with 1,600 to 2,600-pound stallions.

Tested Seeds.

This is the day when people want to know things. It is not enough to simply make an assertion, you must produce the proof for most of us are from Missouri, and have to "be shown." Especially is this true of the farmer with his seed. He has been reading how corn is bred and tested and sorted, and he thoroughly believes in that sort of thing. He knows that that is the only way he is ever going to get seed that will make his acres earn him the profit they should. Slip-shop ways of farming and haphazard seed might have answered the purpose a few years ago, but land is getting to be too valuable to admit of even pretty good farming. It must be good farming and tested seed must be planted if the farm is to yield him proper returns for the hard work of tilling the soil and harvesting the crop.

Same way with the garden. The seed counts a whole lot for the success or failure of the garden, as well as the farm, and the man who raises the seed you plant can help or hinder you. He should know that the seed he sells you is better this year than the seed he sold last. But most seedmen don't know that.

That method does not suit the wide-awake farmer and gardener of to-day. He has been studying along the lines of improvement, and he wants to know that the man who grows his seed knows how to test it, and how to grow better seed every year.

HENRY FIELD TESTING SEEDS.

In the accompanying illustration we show how Henry Field, an expert gardener and seed-grower of Shenandoah, Iowa, tests his seed in an incubator. He says, "I have struck a good plan for getting uniform warmth and moisture when I am testing seeds. I put the boxes with the seeds in into the egg-chamber, set the regulator for about 70 degrees, and have spring weather made to order. The conditions are the same as spring out of doors, and the seeds sprout nicely if they are good grade."

Mr. Field is meeting with remarkable success, as a seedman, because he is a practical gardener and is making a scientific study of seed-growing. He applies the knowledge thus gained to the improvement of the seed he grows. He was the first man in the West to sell seed-corn in the ear, and also the first to sell shelled, graded and tested seed-corn, guaranteed "your money's worth or your money back."

Write to him for any information you desire about seed or any phase of gardening, he will gladly answer any questions that will help you to make your garden or farm work more pleasant and profitable to you.

The KANSAS FARMER has just had the pleasure of sampling a specimen each of Black Ben, Senator, and Delicious, apples sent by Stark Bros., of Louisiana, Mo. The Black Ben was as big as ever, well colored, firm, crisp, and looked capable of keeping until midsummer. The Senator was of nice size, shape, and color, and possessed a splendorous skin of its own. It had been kept long enough as was shown by discoloration of its flesh

on one side. The Delicious was in exactly the right condition for eating. It was a large apple, well-colored, juicy and melting, delicately flavored, an apple among a thousand.

Wichita Nursery.

There has been a great increase of interest in tree-planting and fruit-growing in Kansas, Missouri and the Southwest in the past few years. This is a good thing for these regions, and gives promise of much more prosperous times for the farmer who uses such foresight as to plant plenty of fruit and bush fruits.

W. F. Schell, proprietor of the Wichita Nursery, who was elected vice president of the Kansas State Horticultural Society last winter, has done much to increase the interest taken in fruit-growing throughout all these regions. He was the Kansas Commissioner of Horticulture at the World's Fair, and won the gold medal for the installation and display of the Kansas exhibit. He also received a gold medal from President Francis for merit in keeping up the exhibit during the seven months in so attractive a manner.

Mr. Schell states that the Southwest is an ideal place for the growing of tree- and bush-fruits of all kinds, but that stock should be selected that is especially adapted to the soils and climate of these States.

The Wichita Nurseries, Wichita, Kansas, are ideally located for supplying the right kind of trees, bushes, vines, etc., of every variety for these localities. They have direct connections with all points and sell at wholesale prices. All their stock is true to name and they are perfectly reliable people to deal with.

Mr. Schell gives all orders his personal attention, which means much to the purchaser, for the majority of nurseries leave the filling of orders to help who are often careless in their work and many times incompetent to select the right stock. Patrons of the Wichita Nursery receive the benefit of Mr. Schell's wide experience and knowledge of horticulture, as he cheerfully gives them any information they wish on this subject. They have just printed a beautiful new catalogue which contains much interesting and valuable matter. We advise all our readers who are interested in fruit-growing to write them for a copy. They will gladly send it free. Just address Wichita Nursery, Wichita, Kansas.

An Evergreen Specialist.

D. Hill, of Dundee, Ill., has long been known as an evergreen specialist, and a visit to his nurseries establishes his right to the title beyond question. For years Mr. Hill has made the study of evergreen culture a specialty with the result that within the confines of his ample grounds are to be found specimens of almost every variety of evergreens. Of those kinds which are in more general demand his stock numbers into the millions, while the most perfect specimens of the less hardy and rarer varieties are also to be found there. Many of these trees are natives of our own country and cover the slopes of the mountain ranges in their respective localities with vast forests of pine, spruce and cedar. There are others which have been imported from foreign countries, some coming from Russia, Switzerland, Japan, Australia, and other far distant climes. Mr. Hill has given the subject of transplanting and transporting these trees especial attention and his method of digging and packing is such that there is seldom any loss caused by the operation, and the trees thrive and do well in their new locations even though they may have to travel many hundreds of miles before being placed where they are to remain permanently. While the Dundee Nurseries are particularly noted for the fine quality of their evergreens they also include deciduous trees, shrubs and other plants usually found in a well-stocked nursery. They are prepared to supply orders for almost anything in this line. Any one contemplating the planting of either evergreens or the other species will do well to secure a copy of Mr. Hill's catalogue. This book is but recently from the press and is beautifully illustrated and contains full information of value to any one in need of nursery stock. It will be sent free on request. Address Mr. D. Hill, Dundee Nurseries, Dundee, Ill., mentioning the KANSAS FARMER.

Cures Bone Spavin of 7 Years' Standing.

Wilton, Jct. Ia., Jan. 7, 1905.

Dr. B. J. Kendall Co., Gentlemen:—I have used your Spavin Cure and find it a great remedy. I have used it on a horse that had a bone spavin for seven years and after using two bottles of your Spavin Cure find it as sound as a dollar—a complete cure. You can use this testimony if you so desire.

Yours truly,
JULIUS GRODERT.

The Grain Belt Realty Company, Concordia, Kans., owner of 60,000 acres of fine farming lands, invites persons wanting farms on the great wheat, corn, and alfalfa lands of Central and Western Kansas to buy directly from the owner, thus saving commissions. The rapidity with which Kansas lands are going into new hands admonishes those wanting farms to move quickly. Write to the above-named company for detailed information of the bargains offered.

Are there farms in Kansas that pay 25 to 50 per cent? Such have been reported. The advertisement of Thos. D. Hubbard, Kimball, Kans., in this issue, tells about them. Write to Mr. Hubbard for particulars.

Has Not Lost Any Hogs Since He got Sloan's Liniment.

Dr. Earl S. Sloan, Boston, Mass.

Dear Sir:—My hogs had hog cholera three days before we got your liniment which was recommended to me by a neighbor who was using it with success. I have used it now for three days and my hogs are almost well. One hog died before I got the liniment, but I have not lost any since.

A. J. McCARTHY, Idaville, Ind.

PUBLIC SALE

Jacks, Jennets and Mules

Second Annual to be held in

Savannah, Missouri, March, 8, 1906

22 large Black Jacks with white points, the kind that has built my annual breeding trade to over 600 mares and jennets at one barn and that has made Missouri famous as a mule State. As a class they possess the essential points for good breeders, size, heavy bone, good width, length, heads, ears, style, substance, and of the best breeding known. Four large Black Jennets in foal of same character. 22 extra good coming 3-year-old mules, the good boned, wide out kind. Some of them will mature in mules to weigh 1400 to 1500 pounds; and 4 good young harness horses. Write for illustrated catalog.

G. M. SCOTT, Route 2, Rea, Missouri.

Among Our Seedsmen.

Commencing with this issue, our readers will notice the advertisement of the Hart Pioneer Nurseries of Fort Scott, Kans., advertising high-grade nursery stock. This is an old established firm, having organized their business in a small way in 1865, until at the present time their nurseries comprise over 600 acres and are among the largest in the West.

They make a specialty of the mail-order business, and sell their stock direct to the planter at wholesale prices, which saves the consumer all agent's commission.

They advertise their stock to be strictly first-class, pure-bred in every respect and guaranteed true to name.

All of our readers who contemplate planting nursery stock of any kind this spring, will do well to drop a card to the above firm, asking for their wholesale catalogue. And you will do us a favor if you will kindly mention the name of this paper in writing to them.

One of the most interesting catalogues of grape-vines and small fruits is that of Geo. S. Josselyn, Fredonia, N. Y. At the World's Fair, St. Louis, Mr. Josselyn was awarded the only gold medal to any individual or firm for out-of-door grown grapes. About 90 per cent of his exhibit was Campbell's Early, a grape reputed to be of the highest quality, to begin ripening with Moore's Early and to improve for two to six weeks, making it a very early, a medium, and a very late grape. It is also claimed that it bears about three times as much fruit as any other variety. Write for Mr. Josselyn's catalogue, mentioning the KANSAS FARMER.

The advantage of planting perfect seed is but just beginning to be recognized. The genius of the inventor is therefore turned to the production of a seed grader that will separate the perfect from the imperfect, the large from the small, the heavy from the light. The Chatham Fanning Mill, made by the Manson Campbell Co., Detroit, Mich., is a machine that has been designed to meet the demand for a perfect grader. Get a catalogue and learn the merits of clean, pure seed and of the way to make sure of it.

Attention is called to the advertisement of nursery stock, trees, and small fruits in this issue, by John F. Dayton, of Waukon, Iowa, who is well known to our readers as having been for twenty-six years engaged in selling directly to the planter. He offers 400 strawberry plants for one dollar, and other stock at low prices. Write him for free catalogue.

The seed catalogue of Funk Bros., Bloomington, Ill., gives some exceeding-

ly valuable suggestions on breeding corn. These farmers of 25,000 acres were among the first to take up scientific breeding of plants in a large way. Their catalogue is mailed free on application. It should be in the hands of every grower of corn.

The Zimmerman Seed Co. of Topeka, Kans., is one of the vigorous and growing institutions of the State that does things. Get a 1906 catalogue of this company and select from it. Not one of the people who have had dealings with this firm has ever complained to the KANSAS FARMER.

A California trip is made doubly pleasant if it includes a daylight ride over the Rockies. This is the way of the Colorado Midland. Colonists' rates in effect daily February 15th to April 7th. For full information write Morell Law, traveling passenger agent, 566 Sheldley bldg., Kansas City, Mo., or C. H. Speers, G. P. A., Denver, Colo.

The KANSAS FARMER is in receipt of Vol. XX, Standard Poland-China Record, published at Maryville, Nodaway County, Mo. It is neatly indexed and contains record of pedigree boars from No. 35080 to 37282; and of sows from No. 83310 to 88666.

A magnificent steel engraving of Hagerman Pass, the most famous mountain pass in Colorado, has been issued by the Colorado Midland Railway. This engraving is 26 by 10 inches and suitable for framing. It will be sent to any address on receipt of 15 cents in stamps by Morell Law, traveling passenger agent, 566 Sheldley bldg., Kansas City, Mo., or C. H. Speers, G. P. A., Denver, Colo.

Wichita
O give me a haystack, a hen and a chickon,
A healthy young farmer with bright-colored vest,
A good horse, feed of corn the pigs to fatten,
And hero's to you a tale of the West.

O give me a bachelor, sonr, nasal, lanky,
With hand that is mortgaged a house fallen down;
A pedigree lengthy, a school-teaching yankee,
And here's to a tale of a New England town.

Lucrota E. Lovett.—

Like our shadows, our wishes lengthen as our sun declines.—Young.

Berry's Golden Rule Poultry Farm,
Clarinda, Iowa.

This is the first season for this farm. It has assumed the poultry business recently conducted by Mrs. Berry in connection with the A. A. Berry Seed Co. It has been a breeder of pure-bred poultry for a number of years, and heretofore has made Plymouth Rocks its specialty.

Under the new management this company is offering stock and eggs from eighteen of the leading varieties of poultry. It also manufactures and sells the new "Biddy" Incubators and brooders; a machine with some new features that are both labor- and money-savers. This company also carries a full line of poultry supplies.

Orders for anything in the poultry line will receive prompt and careful attention, and be filled to the entire satisfaction of the customer. We strongly advise all those who are interested in poultry and incubators to write for this firm's valuable book, "Profitable Poultry," which will be sent upon receipt of 3 cents in stamps to pay postage. See the ad on page 229. It will pay you to read it. Address Berry's Golden Rule Poultry Farm, Clarinda, Iowa.

THE MARKETS.**Kansas City Live Stock Market.**

Stock Yards, Kansas City, Mo.

Monday, February 26, 1906.

The heavy marketing of cattle continues to be the feature, 43,200 last week, a small decrease from the week before, but 17,000 more than same week last year. Buyers tried to break the market the first of the week, but had no success whatever, and each day's trade closed up firm, until Thursday. The week finally closed 10@15c lower on nearly all classes, but lower prices only applied to what few cattle came in Friday and Saturday, a small proportion of the total receipts for the week. It is beginning to be doubtful whether there will be much more of an advance this spring. May corn has been selling 5c lower than a year ago, which fact, together with the fact that feeders have made money on the stuff already marketed, has had a tendency to put large numbers of cattle on feed for the spring market.

The cattle supply to-day is 10,000 head, and as other markets are lightly supplied, market is strong to 10c higher. Buyers have been favoring the light-weight beef steers, and choice heifers for the last two or three weeks, although, of course, prime heavy steers still bring top prices. The best price was \$5.80 last week, top to-day \$5.50, bulk of beef steers \$4.75@5.40. Choice heifers sold at \$5. top cows \$4.50, bulk of heifers \$3.75@4.50, cows \$3@4. bulls \$2.65@4. veals a shade lower, \$6@7.25. Stockers and feeders were at a point almost out of reach first of last week, and had to come down 15@20c before the close of the week to stimulate much trade. They are strong to-day. Feeders sell at \$4@4.75, stockers \$3.35@4.60. A string of 669 head of panhandle stockers, 682 pounds, sold straight at \$3.90 on Wednesday, and some high-grade Colorado stockers at \$4.60 Thursday.

Hogs sold Saturday at the highest point this year, but weakness was evident at the finish. The market is somewhat nervous, subject to fluctuations, and some traders believe it has reached the limit. Supply was heavier last week, at 61,000 head, run to-day 6,000, market 10c lower, top \$6.12½, bulk of sales \$5.95@6.10. light hogs \$5.90@6.05 mainly. pigs around \$5.50.

Lambs declined 15@25c again last week, sheep held steady. The quality of lambs is also inferior, and feeders either overlook the great benefit to be derived from the last twenty or thirty days feeding, often 30 to 50 cents per hundred, or they fear the future market. Supply to-day is 8,000, sheep strong, lambs weak. Some lambs sold at \$6.75 Friday, bulk of lambs to-day \$6.10@6.40, yearlings \$5.75@6.10, 112-pound Western wethers at \$5.80, 112-pound Western ewes at \$5.35, medium to common ewes \$4.25@4.75.

J. A. RICKART.

South St. Joseph Live Stock Market.

South St. Joseph, Mo., Feb. 26, 1906.

The trade in cattle to-day showed little change from the close of last week. Good, light, and medium-weight steers sold with a little strength, while others held about steady, although there was some dullness on the fairly good, medium, plain, heavy styles, selling around \$4.85@5. The market on cows and heifers was steady to strong, and veals and bulls indicated no especial change. The market on stock and feeding steers was the dullest in many weeks, as the snow still prevailing curtailed demand both on country account and regular dealer account. Good kinds were around 10c lower while the common to fair qualities were 10@15c lower, and in extreme cases more. Following are current quotations: Native steers, \$4@6; Texas and Westerns, \$3.75@5.35; bulls and stags, \$1.90@4.65; veals, \$3.50@7.75; yearlings and calves, \$2.75@3.80; stockers and feeders, \$3.15@4.50.

Owing to supplies of hogs at the five points showing a gain of 11,000 hogs over the number in sight on last Monday, and the further fact that three-fourths of the supplies were centered in Chicago, the market to-day broke very sharply, prices being generally 5@10c lower, with more selling 7½@10c lower than any other way. Prices ranged from \$5.90@6.12½, with the bulk selling at \$5.97½@6.07½. The country should still bear in mind that the upward course of values is very unsatisfactory to the packers and that they will take advantage of increased receipts to break the market, therefore advances should not be followed very closely. Demand here continues very strong, and while receipts are comparatively large, more could be sold to good advantage, as prices are well maintained with other points.

The trade in sheep to-day was about steady, but lambs were weak to 10c lower.

WARRICK.

KANSAS FARMER.

Established in 1863.

Published every Thursday by the
KANSAS FARMER CO.,
Topeka, Kansas**SUBSCRIPTION PRICE: \$1.00 A YEAR**

Entered at the Topeka, Kansas, postoffice as second-class matter.

Live Farmers Meet at Stillwater, Okla.

The college town of Stillwater has recently been the "Hub" of Oklahoma agricultural and live-stock interests. Five hundred citizens representing every county in Oklahoma save one, and many parts of the Territory have been in attendance at the college short course in stock-judging and seed-selection, which is working harmoniously with sessions of the Oklahoma Improved Stock-Breeders' Association, and a public sale by its members of pure-bred horses, cattle, hogs, sheep, and poultry. It brought the live-stock talent of the new State—soon to be—the best gathering in its history. The grain and cotton farmers simply could not stay at home with such features as the Oklahoma Corn-Breeders' Association, and some of the best talent from the Department of Agriculture at Washington, and whole volumes of new experimental information fresh from the experiment station. The Oklahoma people attain by leaps and bounds the position that it has taken years for the older States to work out. The whole plan and program worked out as only such affairs can where the management has the details perfectly in hand as have Director Fields and Professor Burtis and their able corps of assistants at this station. The whole week was crowded, if not overcrowded, with good things, all too good to miss. The Oklahoma Shorthorn Breeders' Association, the meeting of which had been called for this week, found the time so taken up with the sale in which so many were interested as sellers or buyers, that it was decided to adjourn the annual meeting, to take place at the Midland live stock sale, at Oklahoma City, March 14-16, 1906.

Professor Spillman, Department of Agriculture, Washington, D. C. developed one of the features of the convention in his presentation of the subject of "Farm Management" and "Problems of Heredity" in live-stock breeding. Dr. Webber, specialist in plant-breeding, got very close to the stock-breeders and farmers with his address on the improvement of the corn and cotton plants by seed selection, both of which were nicely illustrated by some excellent lantern slides. J. F. Stodder, of Burden, Kans., had a very excellent paper "The Value of a Pedigree," which was well received by the breeders.

The attendance this year is several times over 100 per cent better than last year, and what is more encouraging to the management was the enthusiastic attention and close interest manifest by those in attendance. Whether at the Improved Stock-Breeders, or at a session of an institute on improved feeding methods, they were always improvers of some kind.

Unfortunately Colonel Harris could not reach here until the very last of the session, but as he was here last year and is quite well known nearly all remained to get the good things that he always has for his hearers.

F. S. Kirk, of End, was here all the week with his pets, the Air Ship and Council Chimes. Mr. Kirk and his horses have taken care of the interests of the light horse and added very much to the interest of the meeting. H. W. Avery, of Wakefield, Kans., was here to champion the cause of the draft-horse for the Oklahoma farmers, and, judging by the interest they take in the drafter, Mr. Avery is not going to have a very hard time in pushing the claims of the big horse in Oklahoma.

The consignors at the sale, while not enthusiastic on the prices realized for their stock are very much pleased with the outlook for good pedigree stock of all breeds.

That the stock-breeder is well liked in Oklahoma is beyond question. At the last session lively interest was manifested in the location of the next meeting and nearly all of the good towns of the Territory vied with each other in the amount of good things they would do for the next annual meeting of the Improved Stock-Breeders' Association. After a lively consideration of the matter, it was decided to take the next annual meeting to End, and the prediction is freely made that this wheat-belt location will witness the largest attendance and the best contribution of high-class stock to the public sale, held in connection with the meeting, that has ever taken place in the Territory. Here we have the Improved Stock-Breeders' Associa-

We Are Growers of Pure-Bred, Medal-Winning Fire-Dried Seed Corn.

Twenty-five varieties. Will send you one of our new 1906 catalogues and four varietalies, two white and two yellow, of what we consider the best for your section, or will send samples of any variety you may desire. **MANY FARMERS ARE DOUBLING THEIR YIELD WITH OUR SEED.** Our catalogue of farm, field and garden seeds will tell you why this is, and how you can do the same. Sent free on application.

J. B. ARMSTRONG & SON, Shenandoah, Ia.

tion, Corn-Breeders' Association, The Improved Breeders of the Wheat Belt, and the Oklahoma Shorthorn Breeders' Association; all of which are prospering wonderfully in the work they have undertaken. Truly Oklahoma is great.

S.

Live vs Dead Rabbits.

EDITOR KANSAS FARMER:—For some years I have been interested in the utilization of by-products, and I have been wondering if there is not some way in which we can get more out of our common rabbits.

My idea is that we ought to trap them with the Wellhouse or similar traps, and ship them to the cities in crates like live chickens. This would be advantageous in various ways, as follows:

1.—It would give the consumer this variety of game in the very best condition possible. It would be fresh, free from gun-shot wounds, and would be a much more sanitary article of diet.

When we have a cold spell, the hunters go out and shoot a whole lot of rabbits, and ship them to the cities. As soon as the weather gets warmer, these rabbits are soon unfit to eat. Yet, no doubt, many poor people eat them at the expense of their health. The writer is quite fond of rabbit, and has lived in the city for some years, but he never could muster up enough courage to buy any of the rabbits for sale at the meat-markets. He lived at Mena, Ark., seven years ago, where there were wild turkeys, deer, black bear, and other kinds of game, and he thinks a nice, fat rabbit is as nice as venison. But it must be prepared properly, and to have it trapped is one of the first requisites. There is no doubt in my mind but what the flesh is tainted when a lot of rabbit-fur is shot into the body, as is the case with the common shot-gun. I have been told that in dressing a mutton, if the hand which holds the wool touches the flesh, it will taint the meat.

2.—It would make it so much nicer for the commission man to have the rabbits shipped alive. He would not have so many losses, and could pay a better price. Then there would be the satisfaction of handling this game in a sensible way.

3.—It would enable farmer boys to make some money out of this game in a much easier way than it is done now. It would be so much nicer to go around of a morning and take the rabbits out of the traps which are scattered over the farm. If they did not care to ship them, they could make arrangements with the local huckster, who, no doubt, would be glad to help the cause along.

I wonder how many farmer boys there are in this State who will be willing to take this matter up, and make it a success?

GEO. S. SOMERS.
Johnson County.

STORED ENERGY.

With a mandrel 4 feet 1 inch long by 1½ inches in diameter, weight 31 pounds and a 95-pound balance-wheel, 21 inches, 2½ inch face, run as long as a straight mandrel 3 inches in diameter, of the same weight, if run at the same speed, if the belt fly off?

Nemaha County. OTTO C. WEYER.

In reply to the above I will say, that the 1½ inch shaft carrying the 95-pound balance-wheel, should run longer after power is taken off than the 3-inch shaft without balance-wheel but weighing the same as the combined weight of the 1½ inch shaft and fly-wheel. The length of time that either will run after the power is removed, depends upon the energy stored up in the rotating parts during the time that the power is applied. The amount of this energy depends not only upon the weight of the parts, but upon the distance of the center of weight from the center of the shaft. For this reason, the combined shaft and fly-wheel, having its center of weight farther from the center of the shaft, will store up more energy per pound of weight than will the large shaft run without fly-wheel.

This answer presupposes that the two shafts run at the same speed and that they are under the same conditions as to proper size and condition of bearings, and that each is properly adjusted.

E. B. MCCORMICK.

ARDEN SEED FROM A GARDENER

If you want to have the finest market garden you ever grew, get your seed of a market gardener.

HENRY FIELD
is a successful market gardener as well as a seedsman. He tests all the seed in his own garden before he offers a grain of it for sale. He don't claim all kinds of impossible things for his seed. He's honest in his statements and pictures and you'll appreciate his way of treating you. Write for the catalogue today. It's free.

HENRY FIELD, Gardener and Seedsman, Box 55, Shenandoah, Iowa.

\$5,000

Reward will be paid to any person who can find one atom of opium, chloral, morphine, cocaine, ether or chloroform in any form in any of Dr. Miles' Remedies.

This reward is offered because certain unscrupulous persons make false statements about these remedies. It is understood that this reward applies only to goods purchased in the open market, which have not been tampered with in any way.

Dr. Miles' remedies cure by their soothing, nourishing, strengthening and invigorating effects upon the nervous system, and not by paralyzing and weakening the nerves as would be the case if these drugs were used.

For this reason Dr. Miles' Anti-Pain Pills are universally considered the best pain remedy.

"I have suffered for 25 years with severe pains in my head, heart and back, and have tried everything I could get and could not find any relief until I got a box of Dr. Miles' Anti-Pain Pills. I suffered as long as 12 hours at a time with such severe pains that I feared I would lose my mind. The Anti-Pain Pills gave me relief in from 10 to 20 minutes. I do not have to use Morphine any more. I wish you would publish this so that other sufferers may find relief."

I. A. WALKER,
R. F. D. No. 6, Salem, Ind.
Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails he will return your money.
25 doses, 25 cents. Never sold in bulk.
Miles Medical Co., Elkhart, Ind.

TOPEKA, KANSAS.**

**Cheap Trips
Southwest**

If you've never been Southwest to Oklahoma, Indian Territory or Texas—there is a treat in store for you. Besides escaping the wintry weather here, a trip now may prove of far greater benefit to you. There are more and better opportunities for making money—for home building, in the Southwest to-day than anywhere else. You have only to get on the ground to prove this.

Rates Cheaper Than Ever
February 6th and 20th
March 6th and 20th

On above dates most lines will sell both one-way and round-trip tickets at exceptionally low rates. If your nearest railroad agent can not give you the rates, write me for particulars.

If you're in any way interested in the Southwest, I'd like to send you my paper "The Coming Country." Address

W. S. ST. GEORGE
General Passenger Agent
580 Wainwright Building, St. Louis, Mo.

Tickets are on sale everywhere, via Missouri, Kansas & Texas Railway.

Farmer's Account Book and Ledger
Saves time and labor—a few minutes each day will keep it; systematizes farm accounts in every department; shows in the simplest manner how to increase profits and decrease losses; endorsed by farmers everywhere. We stand ready to refund the purchase price on every book not found satisfactory. We deliver this book postpaid, including the Kansas Farmer one year, both for only \$2.50. Address:

FRANK IAMS

and his "Big 4" three year old Percheron stallions, weight 8340 pounds. Winners of 1st, 2d, 3d and 4th prizes at Iowa and Nebraska 1905 State fair (over all). They are "sensational show stallions"—"Iams' sort." Iams sells models like these "Peaches and Cream" stallions at \$1000 and \$1500. It's up to you, Farmer John! Will you be "humble good" by "bunco salesmen?" Iams owns and sells more 1st-class stallions than any man in the United States. He has his "selling clothes" on, no man with cash or bankable note gets away from Iams. Iams' daily "Horse show" and his "town of horse barns" filled to the roof with wide-as-a-wagon "black boys."

151—STALLIONS—151

2 to 6 years old, weight 1700 to 2600 pounds, 90 per cent blacks, 50 per cent "top stallions." All registered, approved and stamped by European Government Dad, it's "100 to 1" that Iams is pushing his competitors off the roof and hypnotizing his buyers with "top notchers" at 50 cents on the dollar, "let live prices." Iams' "horse show" at Iowa and Nebraska State fair was the "talk of the town." The "best ever." All winners and sons of winners. His 2, 3 and 4 year old Percherons, Belgians and coach stallions won every 1st, 2d, sweepstakes and grand sweepstakes prize at Nebraska State fair. At Iowa State fair they were winners of 90 per cent of same prizes in above classes, and the Iowa and judge. Iams pays horses' freight and buyer's fare, but "he has the goods" better than he advertises. Teddy, it's "16 to 1" that Iams' "Peaches and Cream" stallions are "hot stuff" (for competitors). "It's a cinch" that Iams saves his customers thousands of dollars in commissions and middlemen's profits. Iams places \$1000 insurance for \$60.

\$1,000—SAVED AT IAMS'—\$1,000

Key! What a rich graft these "slick stallion salesmen" are working on the honest farmer selling 4th rate stallions at \$2000 to \$5000. Iams sells "top notchers," so good, big and cheap that they do not need to be peddled to be sold. Mr. Buyer, see Iams' stallions yourself. Take no "gold brick stallion salesman's" word. Iams has "the goods" you read about. His establishment is worth going 2000 miles to see. Iams makes his competitors "holler." He is knocking "high prices" out of the X'mas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. Georgie, dear! Buy a stallion of Iams. His \$1200 stallions are much better than our neighbors paid those Ohio men \$4000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from breeders, pays no buyers, salesmen or interpreters, has no two to ten men to divide profits with. Iams guarantees to sell a better stallion at \$1000 to \$1500 than are sold to Stock Companies for \$2500 to \$5000 by "slick salesmen, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalogue on earth. References: St. Paul State Bank, Citizen's National Bank, St. Paul, Nebraska.

Lincoln, Nebraska

Now we are here with our catalog. It is ready for distribution. Parties contemplating buying stallions write for catalog. Remember, every stallion represented in the catalog is of our own importation and all of them this year's importation, except the group of three. We also have a large number of stallions not exhibited in our catalog. Note what we say in regard to this group. The three weigh 5,890 pounds; the largest stallions in the West in the same flesh. Some of our 2-year-olds of our last importation will tip the scales at 1,850 to 1,900 in only moderate flesh. Come and examine them at our expense if you find that we have misrepresented to you. Remember, our scales are in front of our office. You do your own weighing.

KANSAS FARMER

Volume XLIV. Number 10

TOPEKA, KANSAS, MARCH 8, 1906

Established 1863. \$1 a Year

STATE DAIRY ASSOCIATION ON THE SANTA FE.

The Santa Fe Railroad Company ran a dairy train over a portion of its lines in Kansas last week. Several lecturers on dairy subjects made the trip. Two coaches were used as lecture-rooms. Thirty-five stops of about an hour each were made in four days. The schedule had been well advertised so that on arrival of the train at one of the favored stations, there was a crowd ready to enter the lecture coaches. Two lectures were given in each coach at each stop where more than fifty people had assembled. If there were no more people than could be comfortably accommodated in one coach, but one was used. A baggage car was devoted to exhibits

KACKLEY, 3.05 p. m.....	45
COURTLAND, 4.09 p. m.....	35
LOVELL, 5.16 p. m.....	25
WEBER, 6.18 p. m.....	75
Total attendance.....	3,467

The lecturers were, Hon. Ed. H. Webster, Chief of Dairy Division, United States Department of Agriculture; Oscar Erf, Professor of Dairy Husbandry, Kansas Agricultural College, Late Superintendent Dairy, Louisiana Purchase Exposition; W. W. Marple, President of the Missouri State Dairy Association, and without a peer as a practical dairyman; A. L. Haecker, Professor of Dairy Husbandry, Nebraska Agricultural College; second only to his father as a dairy authority; E. W. Curtis, Late Assistant Professor of Dairying, Kansas Agricultural College, and a

dresscs, there were not so many farmers as were in the smallest audience that met the Santa Fe train during its first day out.

In the absence of Secretary Graham, L. M. Nellis, of the KANSAS FARMER, in cooperation with the railroad officials, managed the enterprise.

The speakers were introduced by Pres. H. Van Leeuwen of the State Dairy Association. Mr. Van Leeuwen is a practical butter- and cheese-maker, well informed on the scientific side of the business, and withal possessed of the rare ability to bring out the best there is in those with whom he comes in contact.

It is to be hoped that the great success of this industrial lecture train on

College as being carried on by Prof. O. Erf, head of this department.

Whereas, it has been through the co-operation of the Santa Fe Railroad Company, aided by the service of its officials, that the dairy train has been made possible, resulting in carrying the dairy gospel to more farmers than have ever been reached by all the farmers' meetings of the Kansas State Dairy Association.

Therefore, be it resolved that this association extends to the Santa Fe and its officials a hearty vote of thanks for the privileges, courtesies, and cooperation extended.

Furthermore, be it resolved that the Kansas Legislature be requested to provide for an appropriation of \$10,000 for this particular department in order that it may carry on investigations especially for field work experiments, and in general increase the scope of the good work as being carried on now by the department.

Whereas, the dairy industry of the United States is of such magnitude and importance as to command first place among agricultural pursuits, it is desirable that greater recognition be given to the industry by the United States Department of Agriculture than has been accorded in the past.

Therefore, be it resolved that this association heartily endorses the movement that has been voiced by the dairy press and by dairy organizations throughout the country, that the dairy divisions of the Bureau of Animal Industry be made a separate and independent bureau of the Department, thus recognizing the great importance of dairying, placing the divisions in position to receive greater recognition from Congress and to enable the seat of agriculture to give the dignity and standing to the industry it deserves.

In view of the fact that this has been one of the greatest dairy meetings from an educational standpoint that has ever been held,

Be it resolved, that the association hereby express its appreciation of the assistance rendered by the following able speakers: Hon. Ed. H. Webster, Prof. Oscar Erf, Hon. W. W. Marple, Prof. A. L. Haecker, Prof. E. W. Curtis, T. A. Borman, also to Mr. C. L. Seagraves, J. C. Barnett, R. E. Wilson, and C. B. Spencer, officials of the Santa Fe Railroad, who accompanied the train and did everything possible for the convenience and comfort of their guests; and to representatives of the press for the publicity given through their columns, and for the general interest manifested by Mr. L. M. Nellis of the KANSAS FARMER, Mr. Walker of the Drovers' Telegram, and Mr. Peters of the Kansas City Star.

Resolved, that it is the sense of this meeting that local dairy associations be organized throughout the State, where several times each year groups of dairymen in their several localities can be brought together for the discussion of questions in which they are interested, and that the officers of this association be asked to cooperate with such local associations in procuring speakers, and in any other way within their power.

A QUESTION OF INHERITANCE.

EDITOR KANSAS FARMER:—I would like to ask you a question in regard to a matter of law. I will state the case exactly as it is.

A man dies, leaving a widow and eight living children, and one child dead who left a husband and five children. The widow quitsclaims all her interest in the estate (which would be one-half) to the children of her husband, Wm. Johnson, deceased. This is just as the deed reads. Would the children and husband of the child who was dead at the time the widow quitsclaims her interest, be included in the deed?

Please state where we will find on the statutes a law providing for cases of this kind.

A SUBSCRIBER.

The Kansas laws controlling descents and distributions of estates of deceased persons are contained in Chapter 109 of the Revised Statutes. Section 18 of this chapter provides that the estate to be divided among the heirs shall, in the absence of a will, "descend in equal shares to his children surviving him, and the living issue (if any) of prior deceased children; but such issue shall collectively inherit only that share to which their parent

The State Dairy Association Train on the Santa Fe, at Quenemo.

of separators. Several separator experts accompanied the train. The interest in this part of the work was lively.

Following is the train's schedule and the estimated attendance:

TUESDAY, FEBRUARY 27.

Station.	Arrived.	Attendance.
Nortonville, 9.15 a. m.....	250	
Valley Falls, 10.25 a. m.....	100	
Meriden, 11.45 a. m.....	125	
Tecumseh, 1.18 p. m.....	45	
Lecompton, 2.25 p. m.....	75	
Sibleyville, 3.53 p. m.....	80	
Vinland, 4.46 p. m.....	90	
Baldwin, 5.50 p. m.....	50	
Ottawa, 7.10 p. m.....	300	
Evening meeting at court-house.		

WEDNESDAY, FEBRUARY 28.

Pomona, 8.20 a. m.....	150
Quenemo, 9.17 a. m.....	125
Lyndon, 10.40 a. m.....	200
Osage City, 12.01 p. m.....	45
Barclay, 1.26 p. m.....	70
Reading, 2.25 p. m.....	150
Emporia, 3.50 p. m.....	40
Saffordsville, 4.20 p. m.....	50
Strong City, 5.30 p. m.....	200
Evening meeting at Cottonwood Falls.	

TUESDAY, MARCH 1.

Neva, 8.38 a. m.....	20
Burdle, 10.04 a. m.....	80
Lost Springs, 11.08 a. m.....	12

Miltonvale, 11.14 a. m.....	350
Aurora, 12.34 p. m.....	150
Concordia, 1.48 p. m.....	25

life-long dairyman; T. A. Borman, Continental Creamery, Dairy Authority and Expert; L. G. Hamburger, Separator Expert,

The lectures dealt in practical problems and were brief and plain. The KANSAS FARMER has been promised condensed statements of the matters presented.

The train was furnished to the State Dairy Association through the public spirit of the Santa Fe Company. It was accompanied by the following railroad officials: C. L. Seagraves, general colonization agent; J. Burnett, division freight agent; R. E. Wilson, industrial agent; and C. V. Spencer, milk agent. The efficient and cordial cooperation of these representatives of the Santa Fe did much to promote the success of the undertaking.

Several newspaper men were aboard, including representatives of Kansas City and Topeka papers. The snap shot of the visitors and train at Quenemo was taken by one of the KANSAS FARMER men.

The fact that over three thousand people from the farms were enabled to attend the annual meeting of the State Dairy Association by simply going to their several railroad stations, speaks volumes in favor of putting such an association on wheels. At the meeting of the State Association of a neighboring State, held recently, at which the best talent of the land delivered ad-

a portion of the Santa Fe lines will lead to such extension of the plan as will enable all farmers in Kansas with their families to receive the benefits of such lectures by simply taking comfortable seats in cars at their railway stations.

The business meeting of the association was held at Abilene on Saturday. A new constitution was adopted. The old officers were reelected with the addition of an assistant secretary, as provided by the new constitution. Following are the officers

H. Van Leeuwen, president, Ottawa, Kans.; C. F. Stone, vice-president, Peabody, Kans.; I. D. Graham, secretary-treasurer, Topeka, Kans.; H. A. Heath, assistant secretary, Topeka, Kans.

The following resolutions were adopted:

Be it resolved that the Kansas State Dairy Association recommends a system of buying cream on grade, believing that the purchase of cream on its merits by which a higher price is paid for cream of good quality, is absolutely essential to the life and future success of the dairy industry in Kansas.

Whereas, the dairy industry of the United States stands second in money value in the great agricultural realm, and,

Whereas, the State of Kansas offers conditions particularly adapted to this industry but which have not been developed to the extent they ought to be for the good of the Kansas farmers and the public in general,

Therefore, be it resolved that we approve the work of the Dairy Department of the Kansas State Agricultural

would have been entitled had he been living."

The Kansas Supreme Court, in the case of Dodge vs. Beeler, 12 K. 524, held that, "If one of the children shall have died before the ancestor, the heirs of such child will take the portion which would have descended to such child if he had survived the ancestor, and the same rule obtains for determining who are the heirs of such child as in any other cases of descent."

The quitclaim of the widow in the case under consideration is in favor of "the children of her husband, William Johnson, deceased." It does not specify "living children." While this exact case does not appear to have been passed upon by the Kansas Supreme Court and while there is room for difference of opinion as to the point raised, it would certainly be in harmony with the law to hold that the children of the deceased child would be entitled to their parent's share of the portion of the estate relinquished by the quitclaim. The quotation above given from the 12th Kansas Reports is from a decision rendered in 1874. The section of law quoted is a little different from that which guided the court in 1874, having been amended in 1891. The original section before amendment would probably have made the father of the children heir to the half of the share of his deceased wife. The change in the law seems to have been made for the purpose of confining the distribution of the deceased child's share to his or her children, thus making impossible such undesirable situation as would exist in this case if the father of the deceased daughter's children were again married and had become the father of other children not at all related to Wm. Johnson, deceased. The change in the law seems, therefore, to affect only the distribution of the deceased daughter's inheritance and not the fact that she, though dead, is still represented by her children who take of their grandfather's estate just as she would have taken if alive. The quitclaim of the widow may well be regarded as only a relinquishment of her right, turning her half interest back into the estate to be distributed according to law.

BULLS AND DOGS.

EDITOR KANSAS FARMER:—Please answer through the KANSAS FARMER the following:

A has a pasture in which he has some young heifers which, owing to age, he does not wish to breed. B has a pasture adjoining, and keeps a bull. The bull breaks through the fence and A's heifers become with calf. Is B liable to damage, and can B be made to tie his bull?

B has a number of hounds which run A's cattle. A sees the dogs run the cattle and shoots two dogs. Is A liable for the cost of dogs? Please state dog laws of the State of Kansas.

Leavenworth County. F. E. B.

The Laws of Kansas, Chap. 137, Sec. 39, provide as follows: "If any bull over one year old or boar over three months old be permitted to run at large, the owner of the same shall be guilty of a misdemeanor, and on conviction thereof shall be fined for the first offense \$5, and for every subsequent offense shall be fined \$10."

Nothing is here said about restraining the bull by a lawful fence or by any specific means, but the statute says that the bull shall not be allowed to run at large. This language plainly implies that the owner of a bull, an animal proverbial for his disregard of ordinary means of restraint, must be restrained, and if not effectually restrained but allowed by the use of his strength and "bullheadedness" to be at large, the owner is guilty. The owner of the bull is bound to employ sufficient means to keep him in restraint, otherwise the owner is guilty.

Chapter 153 provides remedies where animals of any kind go through a lawful fence and cause damage. Section 34 of this chapter provides: "If any of the animals in the twenty-seventh section of this article described [horse, mule, or ass, or any neat cattle, hogs or sheep, or other domestic animal] shall break into an inclosure surrounded by a fence of the height and sufficiency prescribed by this act [a lawful fence], the owner of such inclosure may take into possession such animal trespassing, and keep the same until damages with reasonable charges for feeding and keeping, and all costs of suit, be paid, to be recovered in any court of competent jurisdiction."

These quotations from the laws are here given in the hope that they will not be used to bring a neighbor into court, but that their clear statement of the duties and rights of the parties at interest will lead to such under-

standing that each will do right, as the law says is right.

The question about the dogs is one on which the Kansas Statutes seem to be wrong, or at least deficient. With the exception of sheep, neither domestic animals, nor men, nor women, nor children have any rights which the meanest cur or the most savage bulldog is bound to respect. He may go through or over or under any fence and do as he pleases without regard to the wishes or interests of the owner of the premises only if he do not molest a sheep. In Chapter 137 it is provided: "If any dog shall kill or injure any sheep, the owner or keeper of such dog shall be liable for all damages that may be sustained thereby, to be recovered by the party so injured before any court having competent jurisdiction." It is further provided: "It shall be lawful for any person at any time to kill any dog which may be found worrying or injuring sheep."

If these provisions were extended to the protection of other domestic animals, and children, women and men as well as sheep, there might be some reduction in that part of the dog population which gives no good reason for abiding in Kansas. But at present a dog is property and therefore under protection of the law to the extent that to kill another's dog lays the killer liable just as if he had destroyed any other animal not his own.

SUGAR-BEETS IN WESTERN KANSAS.

The production of sugar-beets in Western Kansas is on the increase. According to Secretary Coburn's report the following is the five-year record:

Year	Acres.	Yield.
1901	337	1,747
1902	439	4,250
1903		695
1904	472	6,379
1905		8,605

The State appropriation for the payment of bounty on this product is \$5,000 per year. This allows but 58.1 cents per ton on the 1905 production. Had the crop been but 5,000 tons or less, the growers would have drawn \$1 per ton.

The beets of the 1905 crop were sold to the sugar factory at Holly, Colorado. Former crops were sold at Rocky Ford. A new factory is now in course of erection at Garden City, Kans.

The average yield for 1905 is not known because the aggregate acreage has not been reported. Some of the satisfactory yields are reported as follows: Alex E. Cross, of Lakin, reports an average yield per acre of 12½ tons; Wm. Logan, Lakin, 10½ tons; and B. A. Bruce, Lakin, 21 tons. J. S. Friesner, of Deerfield, who is credited with 379 tons, the largest production of any individual in the year, reports an average yield per acre of 12½ tons, and R. A. Beckett, of the same place, who ranks next in aggregate yield, harvested 21 acres which averaged 16½ tons per acre.

Reports show that a good blanket of snow, averaging about four inches, covered the northern three-fourths of the Kansas wheat belt while a good rain favored the southern portion. Thus, again, "the wheat is saved."

The Voice of the People.

W. L. Edwards, Webster, Kans., writes: "Enclosed find \$2.60 for KANSAS FARMER two years and the Cosmopolitan Magazine one year. I would liken the KANSAS FARMER to the old-time religion—it just suits me."

C. H. Dauley, Jennings, Kans.: "Here's success to the 'old reliable' KANSAS FARMER. Herewith I send you another new subscriber to your valuable, and indispensable paper at the introductory rate, namely fifty cents."

L. C. Teed, Benson, Mich.: "I have received all right the book you advertised, 'Farm Grasses of the U. S.' I thank you for it. It is a very instructive work and I believe it would be a good thing if in the hands of and read by every man and woman engaged in agricultural pursuits."

Cal. E. Pearson, Osage City: "I am so well pleased with the paper you send me that I can not express my thanks fully, so I gladly give you a few addressees of my friends who should become subscribers if they are not already on your list."

Albert Hall, Plainville, Kans.: "I notice in the KANSAS FARMER that parties are wanting greyhounds. There are a great many in this county. I have one myself, a wolf dog, but he is a greyhound." [Parties having well-bred dogs for sale should advertise them in the KANSAS FARMER.—EDITOR.]

M. Jennings, Webber, Kans.: "Enclosed find check for \$1.50 for the KANSAS FARMER one year and renew my

subscription to the Semi-Weekly Capital. I had been taking the KANSAS FARMER for several years and concluded as I had quit the farm I could get along without it; but I miss its friendly face and its wise council every week, hence my subscription."

Miscellany

Secretary Coburn Appreciated.

Secretary F. D. Coburn of the Kansas Board of Agriculture has received from the Louisiana Purchase Exposition Management the diploma and commemorative medal, "conferred in special recognition of his services as organizer and chief of the Department of Live-Stock of the Universal Exposition of 1904."

There were received with these from President David R. Francis and Secretary Walter B. Stevens personal letters highly complimentary to the efficiency of the arduous work performed there by Chief Coburn in behalf of the Improved live-stock interests and the exposition. President Francis wrote: "Your work in laying the foundation and plans for the live-stock show entitles you to the opinion of the Exposition Management that this was one of our highly successful features. From all quarters I hear nothing but expressions of satisfaction with the rules laid down and with the awards obtained under those rules. This you are entitled to know. I take pleasure in extending to you congratulations upon the results."

Secretary Stevens in a long letter said, among other things, "We all look upon you as the one who insured the success of the Live-Stock Department, and I assure you it was a great success." Also, "The medal is of the character given to directors of the exposition, members of the Cabinet at Washington, members of the foreign State commissions, and a limited number of other persons whose aid and encouragement the exposition management deserved to recognize."

As is known, Mr. Coburn's health failed under the great strain of his eighteen months work at St. Louis, and the exhibition he had planned and builded in every detail was finally made under the management of his former secretary and right-hand man, Col. Charles F. Mills, whom he had recommended as his successor.

Switch-Board Rates.

EDITOR KANSAS FARMER:—I noticed in the KANSAS FARMER of February 15, an inquiry regarding county telephone contracts. From the answer given I feel sure you do not understand all of the conditions governing the rural telephone line. The subscriber was advised to sign a contract for a period of three years or even longer if possible, at a rate of \$6 per year for central fee.

There is little comparison between a city and rural line. In the first place, the farmers usually own their lines and phones—as was the case with the subscriber making inquiry—the farmers bearing all expense of keeping the same in repairs, while in the city the lines and instruments are owned and kept in repair by the phone company. Again, there are usually as many as twelve telephones on a rural line, and this at \$6 per year for each member, makes a total of \$72 a year for each line running into central. Experience has shown that these twelve instruments give central but little more work than the average city line; \$6 is therefore too high. What would the city men think of \$72 if they owned everything but the switch-board? The very fact that the farmers are asked to contract for three or more years at this rate, is proof in itself that the central management is well pleased with such a rate. The reason, in my opinion, that the subscribers are asked to contract not to connect with any other system, is because the company realizes that the rate is too high and hopes by this means to avoid open competition.

In this county we pay a rate of \$4 per year. We were required to sign a contract similar to that mentioned by the Harvey County subscriber, but we refused to sign for more than one year and were particular to see that all contracts expired on the same date. This was to avoid difficulties in case we desired to ask for better rates the next year, or to establish a central of our own. Upon investigation we have found that even \$4 is too high; and steps are now being taken to organize the entire county into a company and either secure better rates, or establish a new central. In a city of six or seven

thousand or less, two companies can not well exist, and if the farmers establish a central they can force the other system from the field, for they are content to run their system at actual cost.

My advice to the Harvey County subscriber, would be to contract for one year and then get busy among the farmers and work up a county organization. Then if the central company refuses you better rates, put in a switch-board of your own and force them out of business. If this is done, you will get as good or better service at one-half of the present cost.

McPherson County. R. B. FELTON.

Concrete Foundation for House.

EDITOR KANSAS FARMER:—You helped me so much in my last inquiry I must come again.

What would be the best and cheapest for a foundation for a house, rock or cement? I have a great deal of small rock from the size of an egg up to as large as one's head, that I could use in a cement foundation. How broad and deep ought it to be, and do you think it would be just as good as solid rock? Would it not be a great deal cheaper, as rock is expensive here? The house is to be 16 by 34 with wing 16 by 18 feet, two stories high.

Kingman County. L. M. GAWTHROP.

If a good concrete is used, twelve inches will be broad enough for the foundation. The depth is not so easily determined without a knowledge of the nature of the soil and "lay of the land." Two feet will be deep enough for almost any situation. Many two-story houses are placed on foundations which reach only one foot into the ground. If the concrete is well handled so as to be strong and to form one stone there will be little danger of unequal setting. Such a concrete foundation should not be very expensive in parts of Kingman County, where stone of the sizes mentioned is easily procured. Sand is probably to be had for the hauling, and cement can be had at reasonable prices.

Bobby—"I think Tommy Jones is the meanest boy I ever knew."

Mamma—"What has Tommy been doing now?"

Bobby—"I said I was going to be a poet when I grew up; and he said he'd be an editor, and wouldn't print any of my poems unless I'd be his horse every time."—The Evangelist.

Agriculture

Cow-Pea Questions.

This article is written in response to the following questions sent to Prof. A. M. TenEyck, of the Agricultural Department of the Kansas State Agricultural College, from farmers over the State:

(1) What is the best way to sow cow-peas for fertilizing purposes? (2) About what per cent of fertilizing qualities would be lost if cow-peas are cut and thrashed for seed as compared with turning the whole crop under at the proper time in its green state? (3) After thrashing, what is the value of cow-pea straw or fodder as compared to millet hay not thrashed? (4) Would stock do as well on cow-pea fodder alone as they would on millet hay alone before the latter was thrashed? (5) What is the fertilizing value of cow-peas plowed under as compared to the ordinary amount of barn yard manure? (6) In what respect, if any, is the Whippoorwill cow-pea better than the New Era variety?

If it is intended to grow cow-peas for forage, the best plan is to sow in close drills, on a clean, well-cultivated seed-bed, planting about June 15. The drills may be placed twelve inches apart. Set the drill to plant about two bushels of wheat per acre, which will plant the peas at the rate of about three pecks per acre. If you wish to harvest the peas for grain, it is better to plant in rows $2\frac{1}{2}$ to 3 feet apart, and cultivate. When the peas are sown in close drills, as described above, the crop may be cut with a mower; but when planted in drill rows farther apart it is necessary to use a bean harvester in harvesting the crop, since the vines lie so close to the ground that they can not be cut with a mower. Probably the most good may come to the land by planting in drill rows and cultivating.

At the Alabama Experiment Station, as reported in bulletin No. 120 of that station, the yield of the crop planted after the cow-peas was in favor of plowing the vines under rather than taking the crop off for hay, as follows: Increased yield per acre of corn, 49 per cent; sorghum, 9 per cent; cotton, 40 per cent. In the Alabama experiment the soil was rather light and poor in quality. It was observed also that the fertilizing effect of the cow-peas plowed under was more lasting than when the crop was taken off for hay. There was a large increase in the crop succeeding the cow-peas, even when they were taken off for hay, and the question whether it will be best to plow under the green cow-peas or remove the crop from the land depends largely upon the soil. If the land has been farmed a long time and needs humus badly, it may pay to plow under the green crop; also, light or sandy soils as well as very heavy clay soils are often benefited by green manuring. Much of the average soil of Kansas of the loam or clay-loam type would receive much benefit simply by rotation with cow-peas, and it is a question whether plowing the crop under would always give increased beneficial results. As a rule, it would be preferable to pasture the crop on the land and plow late in the fall, or leave the refuse vines on the ground through the winter to serve as a cover-crop, plowing early in the spring. If the fodder can be made good use of on the farm, feed it and return the manure again to the land.

Cow-pea straw has little value for feeding-purposes. In order thoroughly to cure the peas and prepare the straw for thrashing, it is necessary to leave the crop in the field a long time after cutting, in which case it is apt to meet with much unfavorable weather, so that when the peas are finally thrashed the straw has become bleached and rotten and largely unpalatable to stock. This straw, spread over the ground, however, will make excellent fertilizing material. But cow-pea hay has a high feeding-value and is practically equal to alfalfa, while cured cow-pea fodder contains even a higher percentage of protein than alfalfa hay. As a rule, it is preferable to grow the crop for fodder rather than for seed, since the former will pay the better. Also, the cow-peas are hard to thresh, the ordinary separator splitting the peas very badly so that it practically destroys them for use as seed. It is almost necessary to thresh by hand peas that are to be used for seed, unless the farmer is provided with a bean harvester. The greatest objection to using cow-peas as a forage or green manuring crop is the price of the seed. They can be raised on any Kansas farm at a much

less cost than the ordinary market price of \$2.50 per bushel.

There are no available published comparisons of cow-peas with barnyard manure as a fertilizer. However, a good crop of cow-peas plowed under green would be equivalent to an application of a light dress of good barnyard manure. According to trials at the Kansas Experiment Station, eight tons of green cow-peas can be produced on an acre, and ton for ton the green cow-peas would be about equal to ordinary barnyard manure in fertilizing value.

The Whippoorwill cow-peas are a little ranker growing variety than the New Era, hence may give a little larger yield of forage. The New Era peas, however, mature a little earlier than the Whippoorwill, and are more apt to produce a good crop of seed than the latter. Either variety will make a good crop of forage. For planting late in the season, after wheat, the New Era are rather preferable, since they grow quickly and become more mature before frost than do late-maturing varieties. The Whippoorwill peas are excellent for planting with corn in the row, or at the last cultivation, since the vines twine enough so that they climb the stalks. The New Era variety has a less tendency to vine.

The KANSAS FARMER, for October, 1905, contains comparison of cow-peas vs. sorghum as fertilizers, by the writer.

A. M. TENEYCK.

Alfalfa and Brome Grass for Pasture.

Have you any Sixty Day oats to sell, if so at what price? I would like to get about 6 bushels.

I want to sow 40 acres to alfalfa and brome grass for pasture and meadow; what quantity of seed would you advise me to sow? This ground was put in barley in 1905, and then listed to cane and is perfectly clean. Would you advise plowing or disking this ground? I want to sow about 25 pounds of flax with it. This is all upland ground. I have about 700 bushels of Kafir-corn and barley. Would it pay to grind for hogs?

I would like to get the bulletins as they are printed. Please put my name on the list.

FRED ZURBUCHEN.

Wabaunsee County.

We still have some Sixty Day oats for sale and can let you have 6 bushels for \$5 as a special price.

I would recommend to sow about 12 to 15 pounds of Bromus inermis with 4 or 5 pounds of alfalfa-seed per acre. Cane is not usually a good crop to precede alfalfa or grass; usually there is a large growth of volunteer cane which tends to smother out the young grass and alfalfa plants; however, we have succeeded in getting a good stand of grass, by seeding after cane. I would recommend to disk and not plow in preparing the seed-bed. If there is much seed of cane on the ground it would have been advisable to plow last fall, but you will hardly be able to produce a firm, well-settled seed-bed by spring plowing. Thus the disking and harrowing will be preferable to plowing.

It will be safer to sow the grass and alfalfa without a nurse-crop; however, if the season is reasonably wet you may get a good stand by seeding with flax, as you suggest. It has been the experience at this station and also among farmers that alfalfa does not succeed well when sown with a nurse-crop; and it is true also of Bromus inermis that it will usually succeed much better when sown alone than when sown with flax or other grains. If this were bottom-land, well-watered, you would have a better chance to secure a catch of grass and alfalfa with a nurse-crop of flax than you will have on the upland, which you describe. Altogether, I would recommend to prepare the seed-bed early in the spring and sow the grass and alfalfa without a nurse-crop. If the land is not too foul with weeds, the alfalfa and grass, seeded alone in this way, will make a much quicker growth and probably a better stand than if seeded with a nurse-crop, and will furnish considerable late summer and fall pastureage, although you should not pasture too early the first season nor pasture too closely. On the other hand, if you sow with flax, even if you secure a stand, the young plants will be dwarfed and spindling in growth and produce little or no pasture the first season.

Your question on grinding Kafir-corn and barley for feed for hogs has been referred to Prof. G. C. Wheeler of the Animal Husbandry Department.

I have requested Prof. J. T. Willard, director of this station, to place your name on our mailing list so that you may receive the bulletins of the station as they are published.

A. M. TENEYCK.

That portion of your letter referring

to Kafir-corn and barley has been referred to me for reply.

Some excellent results have been obtained from feeding Kafir-corn to swine. It has been successfully fed both ground and whole, either soaked or dry. I think in value it may be considered approximately ten per cent less than Indian corn. Barley is also a good feed for hogs and produces a very high quality of pork. It is not quite equal to corn for fattening hogs but is not very far behind it when we consider the quality of pork produced. It would be better for young breeding stock than corn alone as it contains somewhat more protein than corn. It should also be ground for the best results in feeding. If you have about equal amounts of Kafir-corn and barley, I would suggest that you grind them together and wet at feeding time.

G. C. WHEELER.

Breeding Corn—Baling Alfalfa.

Of course corn can be bred up or down—bettered or worsened by selection and care of the seed. I have been a corn-raiser (not very extensive) for 20 years, and in all that time very few seasons passed when I was not trying to get a variety of corn better than I had been raising. About 15 years ago a friend of mine, living in the Missouri River bottom, across the river from Atchison, sent me four bushels of seed-corn of the large, medium late, red and white, known as the "Calico" corn. He said it would out-yield any corn on earth, and I thought so, too. The first year or so I raised it it was the roughest corn I ever saw. There was a sharp sticker on the end of each grain that would soon tear out the best of gloves or tear the hands to pieces. My men grumbled so it was hard to get them to husk it. About one ear in 100 was comparatively smooth. By selecting and planting the smooth ears, in a few years the corn was as smooth as any. So in some way I bred a part of the merit out of the corn, as the smoother it became the less the yield, and I finally discarded it for the big white corn I had been raising for years (I have no seed-corn for sale), and which is grown through this locality generally.

I have usually raised from 15 to 30 acres of early corn for hog feed and have tested about all of the early kinds and for this locality I would plant the early Silver Mine which has proved far superior to all others, while the early Gold Mine proved for me the most worthless of all the early varieties.

Both of these varieties originated, I believe, in Iowa. Several times I have ordered my seed-corn grown further north, mostly from Iowa; but I prefer to plant seed grown in my own locality. My advice, gained from experience, is for one to select the variety he likes. If one can not get it from his neighbors, then improve it by selection. The best corn-rather I know never by any means selects the largest ears, but ears of a substantial size. Both ends must be filled exactly to his notion or the ear is rejected. His corn is now all sold at several cents over the prevailing price, as a premium. The best Iowa Silver Mine seed I ever bought was from Barteldes & Co. which was the same, I think, that had been grown several years near Lawrence. One time I ordered it from Iowa; it seemed to be of the same type, but did not yield nearly as well as the home-grown seed. I am fully convinced that every one can improve their corn just as we improve our stock, by selecting the best and keeping at it. My little experience I suppose would be called both a success and a failure.

I wish some one would give his experience in the "Old Reliable" in baling alfalfa from the swath. Can it be baled from the swath if it is dry enough to put in the stack, shed or mow, as it would be impossible to get it thoroughly dry in the swath? Will it go through the sweat-curo and not mold after baling; and how green can we bale it when taken from the swath? There are a number of us around Rossville that would like information on this subject, and some one that has had some experience, good or bad, will confer a great favor on us, not only here but elsewhere, who will write an article on this subject.

the time came it was cut, rain or shine, as both clover and alfalfa lose by becoming too hard at ripening. We took 3 poles, 6 to 8 feet long, and put them together in derrick-shape and put pegs in them sticking out to keep the hay from slipping and getting solid. We used to pile a half ton of clover or alfalfa on a rick and it would stand for two weeks and not rot as it would lay loose and the air would pass through it. After it stood a few days it could be put in the barn with safety and would not lose much in feeding qualities. When wanted for horses we would let it get riper than for cattle.

Now, in regard to Mr. Moore's inquiry about a floor for a stable. We tried flag-stone and tried plank, but they did not prove satisfactory; so we tore them up and made a dirt floor by laying old fence posts, or any old pieces of wood down and putting from 4 to 6 inches of dirt on it. That floor has been in the stable for 20 years and there is not a mud-hole in it and it has proved healthier for horses, and safer for cows.

JOHN B. BRAUN.

Alfalfa—Disking Grass Land.

Land on which I grew oats last year, also land on which millet was grown, I had plowed early in the fall. Now I wish to ask: (1) Is it wise to sow alfalfa there this spring? If so, what preparation should be made of the soil? (2) Is it advisable to run the disk lightly over the old alfalfa to renew or stimulate better growth? (3) Would you advise disking native grass meadow for stimulation? J. J. HOSTUTLER.

Shawnee County.

The land on which you grew oats and millet last year and plowed early in the fall should be in good condition for seeding alfalfa in the spring. Many farmers prefer to seed in the fall because the weeds, such as crab-grass, are less apt to crowd out the alfalfa. On the other hand, I believe that moisture conditions are perhaps a little more apt to be favorable in the spring. At this station we have often secured good results by spring seeding. The seed-bed for alfalfa should be quite firm and should be finely pulverized on the surface. If you can prepare this seed-bed when the soil is in fairly good condition to work, I think that the spike-tooth harrow would be as good an implement as you can secure, and this should be used two or three times at least. If your soil is cloddy and the harrow does not break it up sufficiently a disk or acme harrow should be used. I would prefer to seed as early in the spring as is possible to prepare a suitable seed-bed.

Experiments conducted at this station and elsewhere indicate that disking of old stands of alfalfa results in a more vigorous growth and a better production. This should be done early in the spring, soon after the new growth starts, or directly after cutting.

It is not best to run the disk lightly over the ground. The best way to disk is to set the disk fairly straight and weight heavily so that the disk will cut into the ground as far as possible. If you do not weight the narrow, set it to disk as deep as possible. This may appear to destroy some plants, but on close examination you will find that very few plants in an old stand of alfalfa will be destroyed but many of the larger plants will be split at the crown so that they will ultimately occupy more ground and be equivalent to two plants. I would not advise the disking of a young stand of alfalfa.

Experiments conducted at this station have shown that practically no advantage is gained in disking native grasses.

V. M. SHOESMITH.

Roughage for Cows—Cow-Peas—Alfalfa.

I would be pleased to have your opinion as to the kind of roughage to raise for my milch cows. I know the value of alfalfa, but do not consider it practicable to sow, as I rent on one-year terms. I intend to try some cow-peas. What is the price of seed per bushel? How much seed should be sown per acre? Which is the best method of sowing and harvesting? If you have anything else to suggest in that line I would be pleased to have you answer through the columns of the KANSAS FARMER.

J. B. ZYBACK.

I have mailed copy of an article giving information regarding the growing of cow-peas. Cow-peas will make excellent roughage for milch cows, both as pasture and as hay, and the high nitrogen content of the hay makes it practically equivalent to alfalfa when the hay is properly cured and saved. The present price of seed, \$2.50 per bushel, makes cow-peas an unpopular crop to plant for forage when one has to buy the seed. A good plan to follow is to plant a few acres for the produc-

tion of seed; as, when the farmer grows his own seed he can well afford the peas for forage.

For forage purposes it is perhaps best to plant the peas in close drills on a well-prepared seed-bed, planting from the first to the middle of June, from 3 to 4 pecks of peas to an acre. Planted in this way the crop can be cut with a mower and put up for hay in much the same way alfalfa is. When the purpose is to produce a seed crop, the peas should be planted in rows 2½ to 3½ feet apart and cultivated. It will be necessary to pull the peas by hand, or harvest with a bean harvester; and to secure the best seed the peas should be thrashed by hand, unless the farmer has a bean thrasher. Thrashed with the ordinary separator the peas are badly split and broken, making them unfit for seed.

For annual forage we have found that sowed sorghum gives a larger production per acre than any other crop. Sowed Kafir-corn also makes good forage. A combination of corn and cow-peas planted in drill-rows makes very desirable forage. The crop may be harvested with the corn-binder and shocked the same as corn grown alone. If the cow-peas are planted with corn, plant late in the season sometime in June; about 1-3 to ½ corn and the balance cow-peas, in drill rows 3½ feet apart, and at such thickness in the row that the peas will average about 3 to 4 inches and the corn 12 to 24 inches apart. This makes a very desirable combination. We have been using such a combination crop to put in the silo during the past few seasons, but the crop could be just as successfully used for dry forage. Cow-peas may be sown with corn, Kafir-corn, or sorghum. Sow 3 to 4 pecks of cow-peas with ½ bushel corn, or with a peck of sorghum or Kafir-corn per acre. If too much of the corn or sorghum or Kafir-corn is sown with the peas, the rank growth of these crops will shade and dwarf the peas so that they will make little forage.

For winter and early spring pasture winter wheat or rye, or a combination of these grains will furnish an abundance of good feed. For early summer pasture sow barley and oats. Oats also make a good quality of hay, and millet is a good dry forage crop. All of these crops except the cow-peas when used as roughage, are deficient in protein, and unless you grow cow-peas or alfalfa for roughage you will almost necessarily have to supply the protein by feeding concentrates, rich in protein, in combination with roughage.

Although you are a renter I see no reason why you should not grow alfalfa. The owner of land, if he knows anything about agriculture, unless he is very short-sighted, will pay something to have part of his land seeded to alfalfa, and the renter need not miss a crop when the land is seeded down. Early fall seeding is often preferable to spring seeding, and by seeding alfalfa in the fall it is not necessary to miss a crop. Some early maturing crop may be grown the year the alfalfa is seeded, while with a good stand, fall-seeded alfalfa will produce a good crop the first season after seeding. The owner of land could well afford to furnish the alfalfa seed, in order to introduce alfalfa on his farm as a crop in rotation with other crops. Alfalfa is not only a profitable crop to grow in itself, but the alfalfa actually adds to the fertility of the soil, and much larger crops of corn and small grains may be grown by rotating with alfalfa than can be grown by continuous cropping with the grain crops.

A. M. TENNEYCK.

Russian Buckwheat.

I write to ask if you can give any information regarding Russian buckwheat, described as follows: Grain about the size of silver hull, or the common black buckwheat, or the grey buckwheat common to Ohio, but not so large as Japanese. The berry or grain is warty on all sides and not a pleasing grain to look at, and the flour made from it is of a greenish cast, but most excellent. My father used to raise it in Ohio and it was a success and also a drouth-resister. I have seen it in a dry season six or eight inches tall and full of seed. It has made a yield of eighty-four bushels per acre. I have been trying to secure seed for years, and any information you can give me regarding it will be thankfully received. I am willing to pay well for a little of the seed, as I believe it will do well in this State.

Father got his seed to start with, through the kindness of one Media Clement, who brought it from France when there on a visit. Please reply if you have any knowledge of the buck-

wheat. Do you know of any way to reach the seed-houses of either Russia or France, that we may obtain a start of the buckwheat?

AMOS HARTLEY.

Osage County.

I can give no information regarding Russian buckwheat which you describe in your letter. The North Dakota Experiment Station, Fargo, North Dakota, is growing several varieties of buckwheat which go under the name of Russian. You might write to the director of this experiment station.

Perhaps readers of the KANSAS FARMER may know of such a variety of buckwheat or of some other variety adapted for growing in Kansas.

A. M. TENNEYCK.

Alfalfa Questions.

The first of last September I sowed a four-acre field of alfalfa that was in very fine condition. The subsoil was well-settled and the top was as fine as an onion bed. The alfalfa came up nicely but in a few days there came a hard, dashing rain which washed the young alfalfa nearly all out. It seemed to sweep the surface-soil off. It was sowed again the last of September, but it did not come up, having been put in too deep. Now I want to sow the ground to alfalfa and am at a loss to know what to do. Shall I sow it this spring, or sow to cow-peas and oats and cut for hay. Would that leave the land in good condition to seed to alfalfa the last of next August? What kind of peas would be the best for this locality? I am located six miles northwest of Topeka on Soldier Creek. If I sow cow-peas and oats this spring, how early would you recommend them to be sown? The land in question is a sandy-loam bottom, sloping to the south, so I think it is a favorable spot for alfalfa. Please inform me at what time or stage of growth peas and oats should be cut for hay.

S. O. MARSHALL.

Shawnee County.

You would probably succeed in getting a good stand of alfalfa on the land described by sowing early this spring, say from the middle to the last of March. By sowing early there is less danger of the alfalfa being washed out or injured by hard, beating rains. I do not consider the danger from frost to early seeded alfalfa as great as the danger from heavy rains and hot weather to later seeded.

Your plan of planting some early crop which may be taken off for hay in order to prepare this land for seeding early next fall, is also a practicable one. The cow-peas, however, do not grow well with oats, since oats require early sowing while cow-peas must be planted rather late in the season.

At this station we usually plant cow-peas about the middle of June. Field-peas may be sown with oats early in the spring and the crop cut for hay, as you have described, when by disking and harrowing a good seed-bed for alfalfa may be prepared. Cow-peas make an excellent crop with which to precede fall feeding of alfalfa. The peas may be sown alone in close drills and cut for hay early enough so that a seed-bed for fall seeding of alfalfa may be prepared, or they may be sown with corn and the crop cut for hay and taken off the ground as described above. Oats seeded alone and cut for hay will leave the ground in good condition for disk-ing and harrowing, in preparation of the alfalfa seed-bed.

You probably sowed too late last fall to get a start of alfalfa. The last of August or first of September is a good time to sow, and I would not advise sowing later than September 15.

Field-peas with oats may be cut for hay about the time the oats are in the milk. The cow-peas may be cut for hay as soon as the first pods begin to turn yellow, or even earlier if it is desired to get the crop off the ground.

A. M. TENNEYCK.

Early-Sown Bromus Inermis.

I am going to sow quite a lot of bromegrass this spring, and wish to get the benefit of your observation and experience as to how early to sow it. I want to sow it as early as I dare to because we are bothered here a good deal with crab-grass. The ground was plowed and put in good condition and bromegrass sown on it last fall, but the seed proved to be worthless and not 5 per cent of it grew. The land is in fine condition now to reseed and harrow in and I wish to know how early I had better sow the grass. Is young bromegrass easily killed by freezing, and if so how hard a freezing will it stand? I have in the past sown it several times, but never sowed it very early, and I believe it should be sown as early as possible.

Ottawa County. G. E. BURNHAM.

Bromus inermis is not apt to be destroyed by freezing weather. I think it advisable to reseed the field described

as soon as the conditions are favorable for cultivating the ground and sowing the seed. I would risk sowing *Bromus inermis* now, providing the ground is ready for seeding. The grass-seed will not start until growing weather comes, and during the early spring before the ground is really warm enough to sprout grass-seed the seed seems to take little harm by being in the soil, and will start as soon as the conditions are right. I think we may take a lesson from nature in the seeding of grasses. Wild grasses are largely seeded late in the fall and during the winter and sprout in the spring as soon as the first warm days come. I am at present preparing a seedbed for sowing *Bromus inermis* and expect to seed by the first of March if weather conditions continue favorable. I would chance early spring seeding of grasses rather than late seeding. In seeding grass early there is the advantage, as you have suggested, that the grass will start ahead of the weeds and thus withstand unfavorable weather conditions later in the season, while younger, tenderer plants would be smothered by the thick growth of weeds, or destroyed by hot, dry weather. I am sending you a copy of press bulletin No. 129, giving information regarding the seeding of *Bromus inermis*.

A. M. TENNEYCK.

Alsike Clover.

Would you be kind enough to send me information in regard to "tame grasses?" What is your advice about sowing Alsike clover in Labette County?

S. H. BELKNAP.

Labette County.

I have mailed you copies of press bulletins Nos. 125 and 129, giving some information regarding seeding of English blue-grass and *Bromus inermis*. Either one of these grasses will seed well with clover in Labette County. You might use the Alsike clover on wet, bottom land with English blue-grass, but I would prefer to use red clover on upland or well-drained soil, also the *Bromus inermis* may be better adapted for the upland than English blue-grass. Timothy and clover would succeed well in your part of the State and the Alsike could be used with timothy on the wet land. Alsike is the wet-land clover.

You ought to continue to try sowing alfalfa alone and also in combination with grasses. I usually recommend sowing 3 or 4 pounds of clover, or 4 or 5 pounds of alfalfa with a little less than the ordinary amount of grass-seed required per acre. For pasture, sow a combination of English blue-grass and *Bromus inermis* with clover or alfalfa, sowing about 10 or 12 pounds each of the grasses per acre with the amount of clover or alfalfa named above. On wet land, redtop will succeed well in Labette County. It might be sown with English blue-grass on such land and some Alsike clover should be included. Timothy also does well on well-watered, bottom land.

A. M. TENNEYCK.

Alfalfa and *Bromus inermis* on Sod Land.

We have 160 acres of land, part hard and part soft, with a never-failing creek running through it from north to south. It is unbroken prairie. We expect to have part broken this year and I am desirous of getting some alfalfa started. In Bartelde & Co.'s catalogue they state that you recommend *Bromus inermis* to be sown with alfalfa for hog pasture. I want mine for hog pasture, and wish to ask you if you think part of the freshly broken, hard land, if disked and harrowed after plowing, and the seed inoculated with nitro-culture, would probably grow alfalfa and brome-grass successfully? And would it be better to drill in the seed or sow broadcast? Also, would the sandy land be better or as good as the hard land? Water is plentiful about 6 to 8 feet from the surface.

Would Turkestan alfalfa-seed be any better or as good as native? There is a depression or slough running back from the creek with some standing water and a marsh—perhaps ½ of an acre—with some salt or alkali in it. Is there anything that would make that land useful?

E. L. KELLOGG.

Harper County.

It will be almost impossible to prepare a good seed-bed for sowing alfalfa and grasses on the sod land which you describe. A much better seed-bed may be prepared on old land. Good, clean, corn ground, well-disked and harrowed, will make a good seed-bed, or early fall plowing which is well settled may be prepared for spring seeding by harrowing or by disking and harrowing. If you should decide to sow the alfalfa and grasses on the sod ground, the land should be thoroughly disked and harrowed until it is finely pulverized and in as firm condition as is possible. At this station we have had good suc-

GET READY FOR HARVEST Do IT Now.

The Way to Get Ready for Harvest

It is not enough to grow a good crop.

You have to harvest it, before you get your profits.

And your profits now depend very largely upon the way you harvest it.

A worn-out harvesting machine, or one that is not very good, even when new, may delay you long enough and waste enough grain, to turn your profits into loss.

It is a mighty poor policy to grow a good crop of grain and then let a part of it rot in the field.

It does not take a great deal of waste to eat up all your profits.

It may be only a spoonful of grain at a time but it counts.

Don't waste.

You can't afford it, and there is no necessity for it.

Get ready for a profitable harvest.

Do it now, while you have time.

Here is the way:

Go to an International Harvester Company of America dealer and ask him for a catalogue of the machine he handles.

He will be pleased to give you the book—and you will be pleased to get it.

He will be pleased to show you the machine—and you will be pleased to see it.

You will find the book extremely handsome, well illustrated with good pictures, interesting from start to finish and full of good, common sense about harvesting machines.

But more important, you will find a good harvesting machine.

That is what you are most interested in for that means dollars and cents to you.

We take it that you want a harvesting machine—that you can depend upon to see you through the harvest without break or delay;

—that will save you the greatest amount of time and labor and worry and trouble in the busy harvest days;

—that will harvest the grain you have grown with the least possible waste;

—that will not go to pieces after cutting a few hundred acres;

—that will be easy on your team;

—that you can get repairs for easily and quickly when you need them;

—that will, in short, give you thorough satisfaction in every way—doing for you everything that you can in reason expect a harvesting machine to do.

If that's what you want, all the more reason for looking up the agents of the International line.

You know the line—the six leading makes of harvesting and haying machines, used wherever grain and grass are grown:

Champion, Deering, McCormick, Milwaukee, Osborne, Plano.

Better harvesting and haying machines cannot be made.

As good harvesting and haying machines cannot be made without such facilities as the International Harvester Company possesses.

Such facilities are made possible only through the co-operation of the manufacturers of these several lines of machines.

It is co-operation which enables them to produce from forest and mine their own raw materials—and thus be independent of uncertain and fluctuating markets. Acting together, they own, control and operate their own coal and iron mines, their own coke-ovens and steel mills, their own lumber camps and saw mills. They not only get their raw materials of first quality, but what is of equal importance they get them when they want them.

It is co-operation which enables them to maintain experimental shops where every effort is made to perfect the principle and improve the design of the International Line.

It is the great demand for their machines which enables them to equip their factories with every possible facility for producing machines of the highest excellence—factories and workmen which could not by any possibility be maintained to supply a small demand.

It is this demand which enables them to maintain agencies almost everywhere where grain is grown—convenient to you—convenient to buy—convenient to secure repair parts.

The fact that so many farmers cannot be persuaded to buy any other,—the fact that so many farmers continue to buy them,—the fact that they are considered the standard wherever grain is grown in every part of the world is sufficient indication of their reputation and their reliability.

We don't believe that you will be willing to let harvest time approach without knowing more about the International line for 1906; we know you will be glad to get the catalogue. Call on the dealer at your very first opportunity.

Go to the dealer now, and get whichever catalogue you want.

If you don't know an International Dealer—write to us for the name and address of the one nearest you.

INTERNATIONAL HARVESTER CO., OF AMERICA.

(INCORPORATED)

CHICAGO, ILLINOIS.

International Line:—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Knife Grinders, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, Bettendorf Wagons and Binder Twine.

cess in sowing alfalfa and *Bromus inermis* broadcast. The alfalfa may be sown with the drill, but the *Bromus inermis*, being a very light seed, is better sown broadcast rather than with the drill. I am unable to answer your question as to whether grass and alfalfa is likely to succeed better on the sandy than on the "hard" land. If you mean by hard land a compact or hard-pan subsoil, it is not likely that the alfalfa will start as well on such land as on the lighter soil, but if either the alfalfa or grass is once well started on the hard-pan land, it may succeed very well.

A combination of *Bromus inermis* and

alfalfa will make good pasture either for hogs or other live-stock. For a hog pasture, I would recommend to sow only 5 or 6 pounds of *Bromus inermis* with 8 or 10 pounds of alfalfa seed per acre. The alfalfa is really the more valuable forage plant, but by seeding the *Bromus inermis* thinly with alfalfa, the grass will gradually thicken up, producing a sod and probably making a more permanent pasture for hogs than will alfalfa alone. There will be no advantage in sowing the Turkestan alfalfa in your section of the State.

You might try sowing redtop and Alsike clover in the marshy ground which you describe. Redtop is an excellent

grass for wet land, and Alsike clover does best on moist or well watered land. Sow 8 or 10 pounds of redtop and 2 or 3 pounds of Alsike clover per acre.

A. M. TENNEYCK.

Explicit.

A gentleman was one day visiting a friend's house, and while strolling in the garden came across his little boy, and, speaking to him, said, "Well, my little man, how old are you?"

The child answered, "Five."

"And what are you going to be?"
And the unexpected reply was, "Six."
—Montreal Witness.

Is Cane Good For Brood Mares.

EDITOR KANSAS FARMER:—I would like to have some information in regard to brood mares aborting, as I have brood mares also a jact and a stallion. In last week's issue of the KANSAS FARMER I read about rations for brood mares. I agree with that statement except the cane for roughness, especially cane with seed on. I think it is the cause of so many mares aborting. I would like to hear from others in regard to this condition, the cause and the remedy.

G. B. TAYLOR.

Dickinson County.

This Pig Is Big For Its Age.

We are in the hog-feeding business, and among some purchased from my father is one of superior quality and size. At the age of 27 days it weighed 18 pounds and now at the age of 75 days it weighs 75 pounds, which we consider exceedingly large for that age. We have fed it up to the present date about 1½ gallons of skim-milk daily with all the corn it wanted and about 1-3 pound of our meat-meal. We fed meat-meal until it reached 50 pounds in weight. Our desire is to keep this pig one year as an experiment to see what we can make it weigh and would like to know if you can suggest any other feeds by which we can obtain better results. If you will kindly answer this in the columns of the KANSAS FARMER we will appreciate it very much.

TAYLOR & WOLFF.

Shawnee County.

The pig which you are feeding is certainly making unusually rapid growth which speaks well for the methods of feeding that you have followed. The chief thing to guard against is that your pig becomes overfat to the detriment of muscular strength and general vigor, as you wish to continue the feeding up to the age of one year. Sufficient exercise must be provided in order to keep the animal in perfect health for feeding period of that length and if it will not take exercise willingly, force it to do so by driving or by some other method. It will be a great advantage if you can supply some form of green feed during the summer, alfalfa being one of the best pastures for the purpose, or it may be cut and thrown to the pigs. Dwarf Essex rape may be sown, or cane, oats or other crops of that nature to supply green feed. If the skim-milk is available, it may be continued, also a small portion of the meat-meal. I think, however, it would be advisable to add a little bran and shorts to the ration. If the corn is ground the entire grain ration may be mixed together. You should keep the pigs in clean, sanitary quarters and it would be well to wash or dip it occasionally with some of the various dips recommended for the purpose.

G. C. WHEELER.

Kansas Live-Stock.

H. W. M'AFEE, TOPEKA, KANS., BEFORE THE NATIONAL LIVE-STOCK CONVENTION, DENVER, COLO.

In sending greetings and wishes of prosperity for the new year, Kansas also sends a record of accomplishments in agricultural and live-stock products that exceeds anything that she has heretofore done and places her in the front rank of all the States. Her agricultural products for the year 1905 amounted to \$168,989,859, or \$37,971,848 more than she produced in 1904. Her record for live-stock, including animals slaughtered and sold for slaughter, amounted for the year to \$239,649,964, or an excess of \$13,363,947 over the record of 1904. These figures, added to the production of mineral wealth for the year, show a grand total of near \$450,000,000 of created wealth for the twelve months ending December 31, 1905.

In the beginning of the year, the live-stock prospects were not bright. There were many uncertainties ahead of the cattle-breeder, and the swine-breeder was but little better off pros-

pectively. There has been a distinct improvement as the months rolled by, and the year closed with a condition of things that was fairly satisfactory to breeders and feeders. This satisfaction, however, did not grow out of the actual conditions, alone, but out of them coupled with the prospects. While the prices for breeding and market cattle have both been low, the prospect has been constantly brightening and the outlook is encouraging. These remarks apply more particularly to the beef breeds of cattle. The breeders of dairy cattle have a different story to tell. They have had a very prosperous year, and have promise of a bright future. It has been practically impossible for the breeders of pure-bred dairy stock, or even those breeding high grades, to meet the demands of the buyers. With the development of the dairy and creamery industry in Kansas has come a pronounced demand for milking breeds and strains of cattle, and those who are not willing to undertake the raising of the distinctively dairy-bred cattle, are taking hold of the dual-purpose breeds with great interest and energy. So great has been this interest in this type of cattle that the great American Shorthorn Breeders' Association has taken formal action looking toward the encouragement and development of milking strains of Shorthorns.

The year 1905 has been a great year for the horseman. There has been a brisk demand and good prices for good horses of the draft and coach type throughout the year and there is every promise for its continuance. The secretary of the Kansas Improved Stock Breeders' Association, who receives reports from each one of its thousand members located in different sections of the State, and who thus has exceptional facilities for learning the facts, is authority for the statement that there has been a greater demand in Kansas for these two types of horses than ever before in her history. Breeders of Standard-bred and trotting-bred horses also report a profitable business during the year with increasing demand for their output.

The past year has been the greatest one for swine-breeders in the history of our State. Better average prices have been realized for pure-bred Berkshires, Poland-Chinas, Duroc-Jerseys and O. I. C. S. than ever before. At no time have the auction sales of swine of these four popular breeds made such good averages as in the year just closed. With the extension of the corn belt westward, the development of her alfalfa area, and the utilization of Kafir-corn and other grains as swine feed, Kansas is rapidly becoming one of the foremost corn-producing States in the Union. The last report of the Kansas State Board of Agriculture shows a total of 2,133,555 head of hogs now in her alfalfa-fields and feed-lots. Kansas now ships more than 51 per cent of all the hogs that are received at the Kansas City market, which is the second largest live-stock market in the world. Yet, in spite of this fact, Kansas breeders and feeders of swine are large buyers of breeding stock from outside the State.

Years ago Kansas had some reputation as a sheep-growing State. Later she dispensed with her sheep flocks and seemed to prefer to raise dogs. At least the census returns show that Kansas has more dogs than she has sheep. However, our farmers are awakening to the value of sheep for Kansas and each year marks the increase in number of flocks in the State. There are no large breeders of sheep in Kansas and none who feed on an extensive scale. Kansas sheep breeders are largely buyers rather than sellers. Their surplus has been taken by their neighbors and practically none are shipped out of the State. The breeders seem to prefer the middle, wool type; and those now owning flocks, and those who are starting in the business, are very generally buyers of this type. More pure-bred sheep have been bought into the State during the year just closed than ever before. Operations in sheep-breeding have been confined almost entirely to the establishment of new flocks and the purchase of new blood for old ones.

In this connection it may be permissible to quote some statistics from the Breeder's Gazette of Chicago which has unrivaled facilities for securing such facts. The figures given herewith show the number of sales of pure-bred animals of the different breeds that have been held in the United States in the year 1905, and the same facts given for comparison for 1904. These figures show that the business is not going backward although they may not afford as much satisfaction as we would like to derive from them. They are given here because they indicate the general

condition of the country and show that of Kansas, as well.

COMPARATIVE AVERAGES BY YEARS.

Red Poll.	1	48	70.00

It may be of interest to know that Kansas has done some big things along live-stock lines in the past. She now has the largest improved live-stock breeders' association of any State in the world. This association has 1,000 members, each of whom is a factor in the development of her agricultural and live-stock interests and exerts a political influence as well. This is the Kansas Improved Stock Breeders' Association.

Kansas has the largest county breeders' association in the world. This is the Marshall County Hereford Breeders' Association which numbers over sixty members, each of whom owns a herd of Hereford cattle.

Kansas has the largest herd of home-bred Aberdeen-Angus cattle in the world. This is the Sunflower herd at Hudson, and numbers about 350 head.

Kansas has the largest Hereford breeding establishment in the world. This is the famous Sunny Slope herd at Emporia, which numbers over 700 head, with an annual crop of about 500 calves.

Kansas has the largest Berkshire breeding establishment in the world. This is located at Burlington in Coffey County, and produces about 1,200 pigs each year.

Kansas has the largest herd of Galloway cattle in the world. This is located at Eureka in Greenwood County and numbers some 400 head of registered animals.

Kansas has the largest Percheron breeding establishment in the United States. This is the Whitewater Falls farm at Towanda, in Butler County. There are importers who have larger studs of Percherons but this statement does not include such.

Kansas has the oldest Percheron breeding establishment in the Louisiana Purchase. This is located at Wakefield in Clay County and includes two mares that won gold medals at St. Louis and that were never defeated in the show-ring.

Kansas raised the largest fleece ever shorn from a sheep's back. This weighed 52 pounds.

Kansas developed the highest-priced Percheron mare in the world. This was the imported-mare Regina, who was matured on Kansas alfalfa and sold at public auction for \$2,500.

Kansas has just held the largest poultry-show in the world, which includes 3,000 birds, exclusive of pet stock.

Kansas has the largest continuous alfalfa-field in the world. This is located in Butler County, and includes more than 2,500 acres.

Kansas has the largest creamery in the world. This is located at Topeka, and has more than 20,000 patrons with a daily capacity of 100,000 pounds of butter.

Kansas stands first in her production of salt, zinc and lead, and in the production of potatoes, of her orchards and other things, when the size of the plant is considered, though these need not be mentioned here.

Leading up to these big things and to others in the future, the most powerful influence perhaps has been the Agricultural College of Kansas which is the largest in the world, with a total enrollment of 1,600 students each year.

Kansas has the largest Experiment Station in the world. This is located at Hays and includes 4,500 acres, devoted exclusively to experiments in agriculture. It is a branch of the Agricultural College Experiment Station at Manhattan, and is under the control of its board of regents.

The few big things mentioned here are quoted from a paper recently presented at the meeting of the Improved Stock Breeders' Association and are given only as samples. Kansas, like Colorado, her sister on the West, is but a young State, and has only just begun her real active life. The possibilities of her agriculture and live-stock are unknown and even undreamed-of by her own citizens. Her oil and gas wells, her salt, coal, and other mineral wealth serve to attract early attention, just as they did in Colorado.

With the passing of the years, however, it is learned that her greatest source of wealth lies in her agricultural

and live-stock products, and we believe that the same is true of her great and vigorous sister State on the west, Colorado.

Stock Foods.

EDITOR KANSAS FARMER:—I would like to ask through the KANSAS FARMER whether it would be considered profitable to use any stock foods for pigs and hogs which have more alfalfa and mixed grasses than they can eat. They get a little milk and about one-half of a feed of corn. A SUBSCRIBER.

Dickinson County.

Stock foods are prepared and used for the purpose of promoting the health and growth of animals. Pigs situated as are those of our correspondent are likely to be healthy and thrifty. Many feeders, however, keep on hand and use some of the recognized stock foods and report good results. A letter to any advertiser of stock foods will bring a full discussion of the subject with abundant testimonials as to the benefits received.

Ward's Poland-China Sale.

J. J. Ward & Sons' Poland-China sale, held at Belleville, Tuesday, February 28, was a grand success. Thirty-four head brought \$1,783, an average of \$52.45 per head. Mr. Ward richly deserved the prices he received, for he is not only a breeder of high-grade swine, but when he enters a sale-ring to buy he pays good prices for what he wants. The following is a complete list of the purchases and prices paid at the sale:

A Good Percheron Sale.

Though Monday, February 26, dawned with a damp, cold snow-storm, it cleared up before noon, so that a good-sized crowd of horsemen and farmers gathered in the sale pavilion at South Omaha, Neb., to participate in the dispersion sale of Maple Grove Percheron stallions and mares, the property of Mark M. Coad, Fremont, Neb. The offering was almost entirely 2- and 3-year-olds, the young things left over at Mr. Coad's sale two years ago. The prices paid show a strong demand for good American-bred draft horses. The sale was under the management of Jno. S. Cooper, with Colonel Gallup on the block. Seventeen 2- and 3-year-old stallions sold for \$10,100, averaging \$594.15 and eleven mares brought \$3,860, an average of \$351, while the twenty-eight head averaged nearly \$500. The following is full list of sales:

Capt. Jack 29197, Fred Hoppie, Richland, Neb. \$450
Hamilton 32549, M. A. Salva, Winterset, Iowa. 435

Test Your Milk

We want you to put Dr. Hess Stock Food to a test. We know what it will do, but we want you to know it. We know that Dr. Hess Stock Food given with the regular ration will make more milk of better quality, and in sufficient quantity to leave a surprising margin above the extra cost. Just take two cows giving approximately the same pounds of milk; add to the ration of one the small doses of Dr. Hess Stock Food as prescribed. Let the other drag along in the same old way. Now we guarantee that

DR HESS STOCK FOOD

will positively produce a big profit. Besides making cows give more milk Dr. Hess Stock Food increases the digestive capacity of market stock, shortening the feeding period 30 days at the very least, besides curing and preventing many forms of stock disease. Stockmen must remember that it is not the amount of food consumed but the amount digested that produces the profit. Increasing the powers of digestion and assimilation according to the best medical authorities can only be produced by the action of bitter tonics, iron, and other medicinal ingredients such as are contained in Dr. Hess Stock Food, the prescription of Dr. Hess (M.D., D.V.S.). The ingredients of Dr. Hess Stock Food are recommended as by the Veterinary Colleges and the Farm Papers. Recognized as a medicinal tonic and laxative by our own Government, and sold on a written guarantee at

5¢ per pound in 100 lb. sacks; { Except In Canada
25 lb. pail \$1.60 and extreme
West and South.

A tablespoonful per day for the average hog. Less than a penny a day for horse, cow or steer.

If your dealer cannot supply you, we will.

Remember, that from the 1st to the 10th of each month, Dr. Hess will furnish veterinary advice and prescriptions free if you will mention this paper, state what stock you have, also what stock food you have fed, and enclose two cents for reply. In every package of Dr. Hess Stock Food there is a little yellow card that entitles you to this free service at any time.

Dr. Hess Stock Food free, if you mention this paper, state how much stock you have and what kind of stock food you have used.

A Big Brown County Sale.

One of the most noted events of the season was the Hays & Gibbs Poland-China brood-sow sale at Hiawatha, Kans., on Saturday, February 17. It was active from start to finish, forty head making an average of \$30.50 per head. The top was paid by W. E. Smith, Baker, Kans., going at the sum of \$65.50. The next attractive one was Chief's Daughter, a spring gilt by Kansas Chief 37507, going to D. W. Evans, of Fairview, Kans., at \$65. Below is a list of those making \$25 per head or more.

WHEN WRITING OUR ADVERTISERS MENTION THIS KANSAS FARMER

glebar 70707, a young bay stallion; and while he has no official record, he has made miles in 2:12½. He is almost a perfect individual and should be a bread-winner for the buyer. For catalogues address Hon. J. W. Creech, Ellington, Kans.

J. L. Miller & Son, of Muscotah, Kans., have four yearling Shorthorn bulls left, and any one needing this class of animals will do well to write them. Mr. Miller is one of the oldest breeders in the country and selects his stock with great care, always looking for the good individuals first. His stock ranks among the best in the State for size, shape, and quality and if you obtain one of these bulls you can not be dissatisfied. Read his advertisement in the Shorthorn columns of this paper and write him at once.

Chas. H. Butler, of Frankfort, Kans., has 25 Aberdeen-Angus bulls for sale. These animals are 12 months old and will weigh 750 pounds each. While they are not eligible for registration they are full bloods and excellent individuals. Mr. Butler has lived at Frankfort for twenty-one years and is one of the largest and best breeders in the country. He heads his herd with bulls from the best breeders in the country and always places individuality and quality above pedigrees, and any one buying of him will be sure of getting what he wants. Write him for particulars and mention the KANSAS FARMER.

Breeders and farmers of Southeastern Kansas will be interested in the sale of cattle and hogs at Elk City, March 17, 1906, at which time will be sold Hereford, Shorthorn and Angus cattle and Poland-China, Duroc and Berkshire hogs. Some excellent animals of each of these breeds will be sold by the consignors, as named in the advertisement. Our readers should write the manager of the sale, Samuel Drybread, for a catalogue and information pertaining to the sale. If you can not attend, John D. Snyder will handle bids sent in care of Mr. Drybread in your interest.

C. S. Nevius, at Chiles, Kans., will hold one of the great sales of the season on March 13. It has been said he is selling the best lot that has been sold since the Linwood dispersion. Our readers are familiar with the show-and-sale-record of this firm, and we predict a good attendance of all lovers of the best in Shorthorns, and there are not all the attractions. In the forenoon of the same day Mr. Nevius will hold his annual brood-sow sale. His herd is one of the most prolific and useful of the good herds of the State, and the sows offered in this sale are bred to one of the largest of all the large Expansion boars. Send at once for catalogue and arrange to attend this sale. Kindly mention KANSAS FARMER when writing.

C. S. Nevius will sell at Chiles, Kans., March 13, a great lot of Shorthorns and Poland-Chinas. The great show-herd Mr. Nevius had out last fall goes in this sale. One of the greatest 2-year-old bulls offered at auction in recent years will be Happy Knight, a son of a great sire, a great show bull and a proven sire himself at the earliest possible age. There are others of like breeding and a great lot of cows and heifers, many by Victor of Wildwood, used so successfully at Glenwood. All of breeding age, safe in calf to either Happy Knight or Prince Pavonia by imported Prince Lovely and out of imported Glendale Pavonia. This bull has for three years won at the Royal, besides winning the best prizes at other big shows. He is one of the best Scotch bulls in service in the West. The hog offering is of the large, useful type, nearly all bred to the Expansion boar, Designer, one of the extra-big kind. Separate catalogues have been issued and our readers should ask Mr. Nevius for one of whichever you are interested in, or both. Arrange to be present as this will be one of the big sale events of the eastern part of the State. Hogs will be sold in the forenoon and the cattle in the afternoon.

J. T. Staadt's Sale.

J. T. Staadt's sale of Duroc-Jerseys, at Ottawa, was not as well attended by the local people as the breeding and merit of the offering deserved. There was a fair number of outside breeders in attendance and the auctioneers and paper representatives had orders from several breeders. Practically all of the offering were April gilts and some of them were bred late. They made an average of \$25 each, which was only fair, considering the quality of the offering. Had they all been due to farrow in March and April and the local support been what it should be when an offering like this is placed at public appraisal, possibly a \$10 higher average would have been recorded. Mr. Staadt has the satisfaction of having had a number of the best breeders of the State represented in the bidding and they secured some very choice animals at very reasonable prices.

Canadian Prosperity.

Ottawa, Can., March 1.—The year which has just closed has been one most satisfactory and progressive with the financial institutions of Canada, and the business of the chartered banks reflects the unprecedented prosperity enjoyed throughout the country during the year 1905.

The increased demands made upon the banks of the Dominion by the commercial and agricultural expansion of the year were provided for without the monetary disturbances sometimes noted in the United States. Whatever opinions may be held as to the composition of the Canadian banking system, it is claimed that its flexible currency has many commendable features, and without which the last few months of the year must have produced a money stringency with probably disastrous results. It is felt that a wider field of credit in the Dominion is needed, and consequently the capital of many existing banking institutions has been

increased and several new banks are in progress of organization.

The chartered banks of Canada today enjoy the confidence of the general public to a greater extent than ever before. The total deposits of the people in these institutions last year were \$523,317,000, which shows an increase of over \$56,000,000 for the year. In actual money in bank probably no other country in the world, comparatively speaking, can make a better showing than Canada.

The total deposits of the Canadian people in the Government savings banks, in special savings institutions, and in the chartered banks alone, amounted last year to the enormous sum of \$609,454,000. This represents an average credit balance of over \$100 per head of the population of the Dominion, and it is stated that the only other country in the world that approaches this record is Denmark, where the average credit balance is about \$96.50 per capita. The above figures, however, do not comprehend moneys deposited with private bankers, loan companies, mortgage corporations and trust companies, or what is hoarded up in secret hiding places.

The annual report of the Dominion finance department, just issued to the public, shows a surplus in the Dominion treasury for the fiscal year of \$7,863,000, and refers to the remarkable increase in the public revenues during the year.

The Apiary

Early Spring Management of Bees.

EDITOR KANSAS FARMER:—The danger point with bees usually occurs during March, principally because at this time, colonies that have gone into the winter with scant provisions run out of stores. Perhaps our greatest losses are due to this. Bees begin to draw pretty heavily on their stores in March, for a prosperous colony now is breeding rapidly, and it should be, if it is going to be a paying one the following spring. Our best colonies, and the ones that give us the best returns in spring in the way of good surplus honey crops, are the ones that have on hand in store a good supply of sealed honey in their combs. Twenty pounds is none too much, and 30 pounds is better. It is always a difficult matter to feed bees during March, and no feeding or nursing will come near to meeting the full requirements.

The only method, and the one that will give us as good results as any, is to have a number of frames of sealed honey laid away for the express purpose of feeding the bees during the month of March. I have practiced feeding in all of its details, and I find that the cheapest, and most convenient method of keeping bees in the required amount of stores, is to thus provide frames of honey during the honey season, and instead of extracting them, put them carefully away for this express purpose. If they are not needed, they are by no means lost, and will not shrink in value for any purpose.

Liquid feeding can be done with good results after warm weather comes in, but not before, and candy feeding so much recommended for winter feeding, will simply keep the bees alive, but it can not answer for breeding up into strong colonies as will the natural stores.

Many warm days appear in March during which we can get the bees to partake of liquid feed, and on these days all goes well just as in spring; the queen begins laying eggs, the cluster of bees expand and cover double the territory otherwise occupied and the queen occupies all the cells thus covered, laying eggs in them, and the bees do their best at protecting the same. The eggs hatch and everything goes well, until a change of weather, and it turns cold, when the bees contract back to their original space on the combs and all the brood outside of this is exposed and lost, and the colony becomes discouraged, and in many cases diseased, and would have been better off if they had not been fed at all. Hence, I would say, to leave off liquid feeding until settled warm weather comes in spring, and then everything is safe, and feeding will be a success. If bees are starving, give them some candy to simply keep them alive until warm weather comes.

Bees that are wintered in cellars, of course, must be treated differently. To a colony that is absolutely out of food even in the cellar, I would give some candy, but no liquid food can be used in the cellar. It is very essential that during late winter, the bees in the cellar be kept absolutely quiet, for they naturally become uneasy at the approach of spring, and it is much the best to keep them in, if possible, until all cold weather is past. In some cases a colony will become so uneasy that it will interfere with other colonies near it, and be the means of arousing them, so that it is necessary to remove

it outside, and allow it to take a good cleansing flight, when it may be returned.

Spring management proper begins about the first of April. It is then that we can begin to get colonies strong. The first honey of the season, ordinarily, begins to make its appearance about this time, and its source is principally from fruit blossoms. If honey is coming in daily, everything will go along all right. The bees are breeding up just as fast as they can, and nothing we can do will add to their advancement (if the hives are all in proper shape, of course,) but if the flow of nectar stops from any cause, then all advancement stops with the bees. The queen will curtail her egg-deposits, and things will be at a standstill until a flow of honey begins again from some source. It is now that we want to fill in by feeding. We must watch closely these intervals between the different honey-flows on up to the time the honey harvest begins after which we turn our attention to reaping our harvest in the way of a heavy surplus crop. It is indeed very seldom that we fail to reap a rich reward for thus attending strictly to our business.

To get the best results, we must understand well the manipulation of hives, always keeping in view the fact that bees can not store honey unless they have a place to store it. A strong colony at the beginning of the honey season has need of at least a 25-pound surplus storage capacity to begin with, and in but a few days, a week or ten days at the least, they need double this capacity. If we put a ten-pound box on a colony of bees at the beginning of the honey harvest and let it there remain, we cannot expect over ten pounds of surplus honey. But by the proper management, we can have filled anywhere from 100 to 200 pounds of the finest of comb honey stored in the latest up-to-date packages that will bring the highest market price, and we become fully convinced that bees pay as well as anything else if properly managed.

A. H. DUFF.
Pawnee County.

The Government Distribution of Queens.

The Bureau of Apiculture of the U. S. Department of Agriculture, sends out the following circular: "It has been customary in the past for the Bureau of Entomology to distribute a limited number of queen bees of the more rare varieties to bee-keepers. This distribution is not intended to be general, since that would be impossible, and, to prevent misunderstanding, the following method, to be used in all future distributions, is announced.

"It is desired that some of the less common varieties which have proven so good may become more widely known among bee-keepers of the country, to take place, as far as possible, of the common black bees and of certain strains of Italian bees which seem to have deteriorated.

"Carniolan bees are very prolific, and are, at the same time, gentle; and there are records to show that as honey-gatherers they are excellent. The recently introduced Caucasian bees, which have attracted considerable attention, are the most gentle bees known at the present time; and records of honey production now coming in indicate that they are excellent. The Cyprian race, which has been criticised on account of its temper, ranks second to none in honey-production.

"Of these races, the Carniolans are sold in this country to some extent, and the Cypriots in less numbers. So far no queen breeder has offered Caucasian queens for sale, and there is, without doubt, an opportunity for a wide sale of these queens, as is evidenced by the requests which come to the Bureau of Entomology.

"The bureau can do more toward the wider introduction of these races by inducing reliable men to take up rearing of pure-bred queens, than by a more general distribution. It is not the purpose merely to give away queens, and the future distributions will be limited as follows:

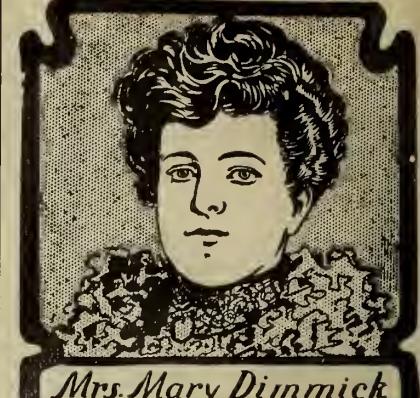

To any experienced queen-breeder who will guarantee to raise queens, and mate them purely in considerable numbers for general sale, the bureau will send, as far as the supply will allow, one high grade queen, purely mated and carefully tested. In addition several queens whose matings are not known will be sent for drone-production, since drones are not affected by the mating; all queens, however, will be from good stock, the number to depend on the supply on hand. The breeder making the request must give evidence of his ability to rear good queens; must agree to offer at least two hundred pure-bred queens a year

TWO OPEN LETTERS

IMPORTANT TO MARRIED WOMEN

Mrs. Mary Dimmick of Washington tells How Lydia E. Pinkham's Vegetable Compound Made Her Well.

It is with great pleasure we publish the following letters, as they convincingly prove the claim we have so many times made in our columns that Mrs.

Mrs. Mary Dimmick

Pinkham, of Lynn, Mass., is fully qualified to give helpful advice to sick women. Read Mrs. Dimmick's letters.

Her first letter:

Dear Mrs. Pinkham:

"I have been a sufferer for the past eight years with a trouble which first originated from painful periods—the pains were excruciating, with inflammation and ulceration of the female organs. The doctor says I must have an operation or I cannot live. I do not want to submit to an operation if I can possibly avoid it. Please help me."—Mrs. Mary Dimmick, Washington, D. C.

Her second letter:

Dear Mrs. Pinkham:

"You will remember my condition when I last wrote you, and that the doctor said I must have an operation or I could not live. I received your kind letter and followed your advice very carefully and am now entirely well. As my case was so serious it seems a miracle that I am cured. I know that I owe not only my health but my life to Lydia E. Pinkham's Vegetable Compound and to your advice. I can walk miles without an ache or a pain, and I wish every suffering woman would read this letter and realize what you can do for them."—Mrs. Mary Dimmick, 59th and East Capitol Streets, Washington, D. C.

How easy it was for Mrs. Dimmick to write to Mrs. Pinkham at Lynn, Mass., and how little it cost her—a two-cent stamp. Yet how valuable was the reply! As Mrs. Dimmick says—it saved her life.

Mrs. Pinkham has on file thousands of just such letters as the above, and offers ailing women helpful advice.

The Kansas State

Agricultural College

OFFERS courses in Agriculture, Domestic Science, General Science, Mechanical Engineering, Electrical Engineering, Architecture and Veterinary Science. Also short courses in Agriculture, Dairying and Domestic Science. Admission direct from the country schools. A preparatory department is maintained for persons over eighteen. Necessary expenses low. Aberdeen-Angus Cattle

25 Aberdeen-Angus Bulls, 12 months old, average weight 750 pounds. These bulls are full bloods but are not eligible to registration. They are the equal of the bulls in any Aberdeen-Angus herd in the country for all practical purposes.

CHAS. H. BUTLER, Frankfort, Kansas.

RUPTURE We have a new creation for the relief of rupture, surpassing any thing in this line ever invented, the price of which is less than for a common truss. We state a few plain facts in our free book containing valuable information that will interest you

IDEAL TRUSS CO., 2286 Auburn Ave., TOLEDO, OHIO.

SWEET POTATOES Yellow Nansemond, Yellow Jersey, White Brazilians, Southern Queen, for sale. If you buy of me you get direct from the grower. Correspondence solicited. W. T. BULKLEY, 319 Exposition Ave. Wichita, Kansas.

for sale to the general public, and must not ask for them an exorbitant price. It is the opinion of the Department that twenty per cent more than the current price for Italian queens would be fair. It will also be expected that in future years the breeders will do their utmost toward the improvement in honey-production, at the same time maintaining the purity of the races. The bureau will be glad to aid breeders of this class to its utmost ability, but will not aid in any way a breeder who offers for sale or sells crossed hybrids of the various races, except in the case of untested queens, and even in that case every possible effort should be made to get pure matings.

"After this distribution, all inquiries to the bureau will be answered by giving a list of reliable breeders, including those who have received stock from the government apiary; and the name of any breeder who knowingly sends out inferior stock will be dropped. It is not the purpose to interfere with the private business of the persons receiving these queens; but these precautions are taken to protect bee-keepers of the country.

"No applications for queens under other circumstances will be considered. All applications will be considered in order of their receipt.

"L. O. HOWARD, Entomologist,
U. S. Department of Agriculture,
Washington, D. C."

Corn-Growing Contest.

EDITOR KANSAS FARMER:—Corn is king of all the crops grown in Kansas. We desire to invite all farmers raising corn, and especially the boys between the ages of 12 and 18, to engage in the corn-growing contest of their county as outlined by Mr. Miller, our farmers' institute secretary; also to call attention to the State contest in January, 1907. Liberal premiums will be given for the best corn. We feel sure this boys' State contest, held in connection with the corn-breeders' contest, will be one of the largest and best agricultural meetings ever held in Kansas, and will be a start towards doubling the yield per acre. This means millions of dollars in the pockets of the farmers, as well as good times for all classes of people. The Kansas Corn-Breeders' Association heartily joins in making this State corn-growing contest for boys one of the means for better and more productive corn. Begin now for the contest.

C. E. HILDRETH,
President Corn-Breeders' Association,
Altamont, Kans.

Blowing or Breathing Wells.

The United States Geological Survey has on hand the investigation of curious phenomena known as "blowing" or "breathing" wells. In the course of collecting well records, the hydrologists of the survey have observed many wells that emit currents of air with more or less force, sometimes accompanied by a whistling sound which can be heard for a long distance. The best known examples of this type of well are found throughout the State of Nebraska. Blowing wells are also known to occur in Rapides Parish in Southern Louisiana. The force of the air current in one of the Louisiana wells is sufficient to keep a man's hat suspended above it. The cause of such phenomena is mainly due to changes in atmospheric pressure or to changes in temperature. During the progress of a low-barometer storm over these regions, the air is expelled from the blowing wells. With a rising barometer, the blowing becomes rapidly less until the current is finally reversed. Differences in the temperature of the surface air and the air in the soil also produce similar effects. When the interstices between the grains of sand, gravel, etc., in which the well is driven are filled with water, the phenomena of blowing is much less noticeable.

Taking Chances.

A small boy had been punished, and in consequence was feeling at enmity with all the world, but with his father in particular. When he came to say his prayers at night he gabbed through them at a high rate of speed, and while asking for the customary blessing on all the other members of the family, including the cat, he left out his offending parent.

His mother understood, but thought it best to "appeal to his better self."

"Harold," she said sweetly, "what about papa? You forgot, dear."

"Didn't. Don't want papa blessed."

"Why, Harold! when you love him so? Just think, dear, papa has gone downtown now, and how would you feel if he got lost or hurt because you hadn't prayed for him?"

This rather worked on the boy's

mind, and slowly he began to clamber out of bed, when, just as he got on his knees, he heard the familiar click of his father's key in the lock. "I guess I'll risk it," he announced, and quick as a wink jumped back into bed.—M. A. Dickorson, in Lippincott's.

A Santa Fe Good Roads Train.

The Great Santa Fe Railroad, which is distinctively a Kansas institution with Kansas interests at heart, has announced a special good-roads train for Eastern Kansas. This train will be equipped with abundance of illustrative apparatus and accompanied by the best and most experienced lecturers and demonstrators available.

Stops of one day each will be made at each place and actual road building will be done. Local communities will be asked to furnish the halls for the meetings and the necessary teams for the demonstrations. All other expenses will be borne by the railroad company who offer this Good Roads School on Wheels to the people free of cost.

The first day's session will be held at Olathe on March 26, and one day will be spent at each of the following named places: Wellsville, March 27; Ottawa, March 28; Iola, March 29; Girard, March 30; Erie, March 31; Coffeyville, April 2; Independence, April 3; Chanute, April 4; Lawrence, April 5; Emporia, April 6; Topeka, April 7.

Remember the dates and be present to hear D. Ward King and other lecturers on this vitally important subject. Also remember that the Santa Fe is bearing all the expense of this train in order that all these lectures may be free to the people.

BLOCKS OF TWO.

The regular subscription price of the KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year and one new subscription for one year with one dollar to pay for both. In like manner two new subscribers will be entered, both for one year, for one dollar. Address, The Kansas Farmer Company, Topeka, Kans.

Domestic Affliction.

A bright girl asked to be absent from school half a day on the plea that company was coming.

"It is my father's half-sister and her three boys," said the girl, anxiously, "and mother doesn't see how she can do without me, because those boys act deadfully."

The teacher referred her to the printed list of reasons which justified absence, and asked if her case came under any of them.

"Oh, yes, Miss Smith," said the girl, eagerly, "it comes under this head," and she pointed to the words, "Domestic affliction.—The Young Catholic Messenger."

The Inquisitive Girl.

New silver and table linen had been purchased in preparation for a dinner which the family had arranged to give to acquaintances to whom they desired to give an impression of prosperity. Little Mary, five years old, was cautioned particularly against making any reference to the new silver. The guests had not much more than got comfortably seated when the youngster piped up:

"Mother!"

"Yes, what is it?"

"Mother, what did you do with the old silver?"

Candid.

A city man complained bitterly of the conduct of his son. He related at length to an old friend all the young man's escapades.

"You should speak to him with firmness, and recall him to his duty," said the friend.

"But he pays not the least attention to what I say. He listens only to the advice of fools. I wish you would talk to him."

A magnificent steel engraving of Hagerman Pass, the most famous mountain pass in Colorado, has been issued by the Colorado Midland Railway. This engraving is 28 by 40 inches and suitable for framing. It will be sent to any address on receipt of 15 cents in stamps by Morell Law, traveling passenger agent, 566 Sheldley bldg., Kansas City, Mo., or C. H. Speers, G. P. A., Denver, Colo.

THE MARK AND THE MOTTO

**"The Recollection of Quality
Remains Long After
The Price is Forgotten"**

Trade Mark Registered.

The difference in *worth* between a good tool and a poor one is always more than the difference in *cost*. Counting the time wasted in constant sharpening and the short life of inferior tools, a poor tool is really more expensive than a good one.

Whenever you need a tool of any kind, it will pay you to buy the Keen Kutter brand, and have the best. All kinds of tools are made under this name, and every kind represents the very highest quality of material, workmanship and finish.

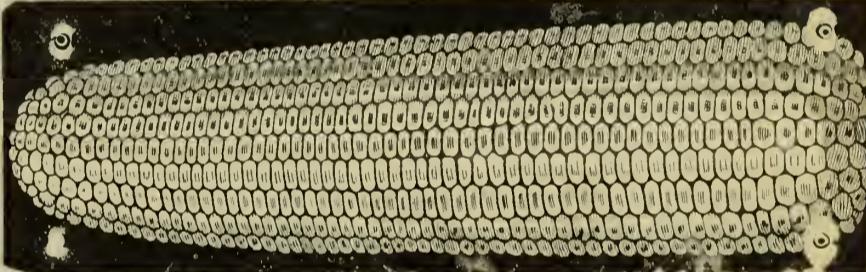

KEEN KUTTER

tools have been the standard of America for 36 years and are the only complete line of tools ever to receive an award at a great exposition—the Keen Kutter line being awarded the Grand Prize at the St. Louis Fair.

Following are some of the kinds of tools made under the Keen Kutter Brand: Axes, Adzes, Hammers, Hatchets, Chisels, Screw Drivers, Auger Bits, Files, Planes, Draw Knives, Saws, Tool Cabinets, Scythes, Hay Knives, Grass Hooks, Brush Hooks, Corn Knives, Trowels, Pruning Shears, Tinner's Snips, Scissors, Eye Hoes, Shears, Hair Clippers, Horse Shears, Razors, etc., and knives of all kinds.

If your dealer does not keep Keen Kutter Tools write us and learn where to get them. Send for Tool Booklet.

SIMMONS HARDWARE COMPANY,

298 Broadway, New York.

Ratekin's Pride of Nishna Seed Corn

"Pride of Nishna" is a golden yellow, 16 to 24 rows; deep grain and small cob; matures in 95 to 100 days; of great vitality and strength to resist drouth and other unfavorable conditions, making from 60 to 100 bushels per acre. "Ratekin's Iowa Silver Mine," white, has made the greatest record for large yields of any white corn in the world—averaging 176 bushels per acre in seven states; full counterpart of Pride of Nishna.

Our Seed all grown by us from absolutely pure stock, especially for Seed purposes. All carefully selected, sorted, and butt and tip ends taken off and graded to uniform size. Seed shelled and graded or in the ear. Change your seed while you can get the best; grow bigger and better crops. Price, \$1.35, shelled, sacked on board cars here; 10 bu. or more, \$1.25. Our big Illustrated Catalog of all Farm and Garden Seeds mailed FREE if you mention this paper. Write for it today.

Address: RATEKIN'S SEED HOUSE, Shenandoah, Iowa.

The Southwest Limited

Was the first train to give first-class service between Kansas City and Chicago. In service and equipment it has no equal. Your patronage is solicited on these two facts. If you doubt the first fact compare the service of today with that before the Southwest Limited entered the field. If you doubt the second fact a trial trip to Chicago via the

Chicago, Milwaukee & St. Paul Railway

will convince you of its truth. The Southwest Limited leaves Union Station 5.55 p.m.: Grand Avenue 6.07 p.m. Arrives Union Station, Chicago, 8.20 a.m.

Horticulture

Early Potatoes as a Profitable Market Crop.

A. MUNGER, BEFORE MANHATTAN GRANGE NO. 748.

The first essential in raising early potatoes is to get some early seed and go to work. The next is to keep at it. Study them as you go. Judgment and experience are the best guides.

If you want to go anywhere, you can not get there by reading guide-boards; you must start and travel. Study your soil, for no two acres are exactly alike. Adjoining farms may be very different. Study your markets. They are as variable as the weather.

Early potatoes may or may not be a profitable crop, but if they are not, it is not generally their fault. Give them close attention from start to finish, and, mixed with ordinary farming, this is hard to do. If you can not do this, plant but few. If they are left to shift for themselves and finally hunted among weeds and marketed late, the verdict will be, "It wasn't much of a year for potatoes anyway." But if we are really going to give them care and raise potatoes, any good corn-ground is a good place, and corn is a good crop to precede them. Manure it well before planting the corn, then again before planting the potatoes. Well-rotted manure may be best, but fresh manure from a cow-stable or hog-pen is all right, but not from a horse-stable.

PLANT EARLY.

Put the ground in good order as early in spring as it is fit to work and the weather is pleasant, and plant at once. The seed will be sprouting in the cellar and you should turn that early energy into a crop. If you plant early in March, cover 3 or 4 inches deep, as the ground may freeze, which will do no harm if the seed is below the frost. If the potatoes come up and the tops get frozen, it will be but a few days until they will be up again and no harm done. If planting when danger of freezing is past, cover half as deep. Early Ohios have for years been the standard variety for this country. The Red River Triumph has been satisfactory with some. Professor Dickens has tested many varieties at the college. He gave me a list of those he thinks worth raising, and considering the number tried the list is short. They are, Early Ohio, Six Weeks and Eureka; Quick Lunch promised well but had only been tried one year. Farther down the list are Early Rose, Triumph, Carmen, and Rural New Yorker. Of eight varieties possibly worth raising, only three are recommended without some qualifications. This only includes early varieties.

TRY NEW KINDS CAUTIOUSLY.

For the main crop plant a standard, well-known variety, and try new kinds cautiously. For any one expecting to raise potatoes, it is a good plan to try a few of one or two promising kinds each spring. If they prove good, you can soon have seed enough for a crop from a very small start. If they are worthless, as most of them will be, you are not out much in time or money. Next year try another kind. One real success for a dozen trials will pay for the eleven failures if you try in a small way. Do not get excited when you read in seed-catalogues of wonderful "world-beaters" and "North Pole Potatoes, six weeks earlier than anything ever heard of before." In getting novelties seed comes high and disappointment makes a sore spot. Try a peck or a pound of these. I have known of 32 bushels being raised from one peck of seed and 6 bushels from one pound of seed. The one pound was put in a hot-bed, the sprouts broken off and set out like sweet potatoes, leaving the potato to sprout again; so there is no need of getting much seed of uncertain kinds. Seven to twelve bushels of seed will plant an acre. If you want to make the seed go as far as you can, cut small, one or two eyes on a piece. If you want your crop to come in the shortest possible time, plant large pieces. They make more vigorous sprouts and have more nourishment for the plant until it gets a root-system established. Plant one piece of seed in a place every 12 or 15 inches apart in the row.

CULTIVATE EARLY.

Before a plant shows above ground, begin cultivation by harrowing. A week later, if the ground is in good order, harrow again and repeat this every few days until the tops begin to be broken and torn by the harrow, then use something else. If the row

has been slightly ridged in covering the seed, a 2 by 4 scantling, fastened diagonally under the harrow at the first harrowing, will clean every young weed from the row, but this must be done before the plants are near enough through to be broken. It also levels the ground, a condition in which it should be kept as nearly as possible throughout the season. After the harrow, the cultivator that will keep the ground nearest level and most thoroughly pulverized is best. Several small shovels are better than a few large ones. The common iron-framed, five-toothed, one-horse cultivator is the best thing I ever used. Spring-toothed weeder are good and take a wider strip. The five-toothed cultivator can be made still better by fastening behind it a piece of 2 by 4 scantling about two feet long, with 60-penny wire spikes driven through it. Drive the spikes 2 inches apart, tie this behind the cultivator by a light chain or rope at each end, so it will drag close behind the cultivator. Spikes will need to stick through 2 or 3 inches. To keep this little harrow from tipping forward at the top, weight the back of it down with some old iron spiked or bolted on until it sets up straight. This is a good pulverizer and leveler for cultivating any other truck.

Whatever you cultivate with, use it often. If you raise early potatoes, you want them early; the price sometimes drops 10 cents per bushel in a day. The thing is to get to market while the price is up; therefore, use the means that will stimulate rapid growth, and frequent cultivation is one of the very best means to this end.

Do not cultivate when the ground is too wet, but just as soon as it is in fit condition after every rain; this will do more good than at any other time. Once a week is none too often, and a week after the last cultivating you want to be digging the crop. If weeds begin to show above the potato tops in the row, hoe them out.

DIGGING.

A lister is a fairly good potato-digger but is wasteful of the crop, and early ones are too valuable to waste. Edwin Taylor, who is authority on potatoes, uses the digger with rods reaching back and upwards from a shovel in front. My experience with this was variable. On sod ground or where potatoes grew in a bunch near the surface, they gave good satisfaction; but in deep, loose soil where the potatoes grew deep, the potatoes were not brought to the top, but hopelessly mixed with the loose dirt. In such a place, a plow or lister is better, perhaps a spading fork better still if you can get the force to use it.

Use marketable-sized potatoes for seed, as a rule, but the small ones raised from large seed, are good for seed the next year—if you stop at that and do not use small seed too long. A good way is to plant part of the crop each year with good-sized seed, and plant the balance with all sizes as they come. Save the seed for the next year where the large ones were planted, and save none where the mixed seed was planted. This is very little trouble and it will keep up the grade of potatoes. I have sometimes raised more bushels of potatoes to the acre where small seed was planted than where large seed was planted, but the grade was not so good. An acre was planted one spring with Early Ohios, large seed. Those the size of an egg were cut in two pieces—smaller ones not cut at all, and larger ones left in good-sized pieces. Fifteen bushels of seed was used on one acre. Strong, thrifty plants soon came up and continued vigorous through the season. The crop matured early. Half of that acre was dug early and sold for \$62.50 to \$125 per acre. Large seed, planted early, and good cultivation on manured ground account for their having done extra well. But we need not despise the day of small potatoes, for they make very good seed where extra earliness is not so important, and in this way often make a good crop for home or late market; but for extra early use nothing but large seed.

If help is not too scarce and high, it will pay to dig early potatoes by hand, but generally this can not be done; so plows, listers and potato-diggers are tried with various degrees of success and wastefulness; but whatever you use, plow and harrow the ground afterwards; and if it is plowed in narrow furrows, you will find many potatoes. In this way I remember getting an additional \$30 worth off of seven acres in a few days one season, and the ground was put in the finest condition for some other crop.

FORAGE CROPS FOLLOW.

After early potatoes, cow-peas, sor-

ghum, Kafir-corn or ordinary field corn can be raised. A Nebraska potato-raiser makes a practice of raising good crops of some early-maturing kind of corn in this way, and gets better crops than average farmers do who raise no potatoes before the corn. This, of course, takes heavy manuring. If no crop is planted immediately after digging the potatoes, the ground is in condition for wheat or alfalfa in the fall.

If the potatoes are not to be dug until late, they need something to shade the ground. Weeds will take care of this if you give them a chance, but if sorghum-seed is sown broadcast just before the last cultivation, it is as easy to have a crop of hay as a crop of weeds. The hay will be as good as if no potatoes were there and it keeps the ground clean.

BIRDS AND PARIS GREEN FOR BUGS.

If bugs get troublesome, use Paris green. If there are but few bugs, they may be thinned by fastening a brush on the cultivator, so it brushes the row vigorously in front of the shovels. The soft, young bugs get buried and mashed and it helps to thin them. This does not hurt the old ones and if they are very numerous, poison will need to be used. Spraying is the standard way, but mixing Paris green with ten times its bulk of flour and dusting it on in the morning when the dew is on to make a paste, is a good way for a few acres or less. Use rye flour if you can get it, as it makes a better paste. This can be put on rapidly with a small hand-sieve, giving it a jerk to shake out the desired amount as you pass along the row. If you do not get over the whole patch in one morning, do not be impatient, the bugs will wait for you. This will not wash off so easily as when sprayed on. In a 100-acre field of potatoes, a horse-power spray cart can perhaps be used, taking two or four rows as fast as a horse can walk.

Quails will eat Colorado potato bugs, as well as most other injurious insects. Farmers should not allow a quail to be even disturbed, to say nothing of shooting them. They are birds that work for nothing and board themselves. The same may be said of most birds. Of the farmers who shoot quails we can only say, "Father forgive them, they know not what they do."

MARKET EARLY.

The market for early potatoes is very variable. If you have only a few, they can be sold in the home market, if you can get there before the "other fellow." But in large quantities they must be shipped by the grower or some one else; and here comes in the chapter about commission, freight, condemned rotten potatoes at destination thrown into the dump, and freight bills sent back to be paid by the shipper. If you ship, do not let a small or spoiled potato get into the car. If you sell to some one else to ship, treat him as you would like to be treated. Handle them carefully and rapidly; do not pour them over the edge of a wagon-bed onto the bottom of it. Just that may make a difference between sound and rotten potatoes at their destination. In five days from the time they come out of the ground, they ought to be steaming on the dinner-tables in Michigan and Chicago.

To sum it up—plant as early as possible; cultivate frequently; dig as soon as they will do; and sell wherever the market promises best.

An Easy Way to Get an Evergreen Windbreak.

Twelve "Blizzard Belt" Evergreens free. This is the offer as made to our readers by The Gardner Nursery Company, Osage, Iowa. If set eight feet apart in row, these twelve trees would in a few years' time make a perfect windbreak 100 feet long. If not wanted for a windbreak, they are of suitable varieties for setting on the lawn, in the cemetery or along the street. This company grows all kinds of hardy nursery stock, and has made a specialty of growing hardy evergreens for nearly forty years; and to prove their hardness and quality they offer to send 12 fine pines and spruces, 2 years old, entirely free to our readers who apply for them at once. Mailing expense is 5 cents which you can send or not as you please. A postal will bring them.

This company's catalogue contains 42 colored plates and a mine of valuable information for fruit-growers. It is easily worth \$1 to any one interested in fruits, ornamentals, etc., but is sent entirely free to all property-owners.

Write to-day and have your order entered for the free evergreens, addressing your letter to The Gardner Nursery Company, Evergreen Dept., Box 740, Osage, Iowa.

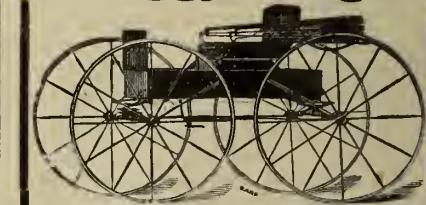

STEVENS FIRE ARMS

Accuracy is not...
more chance any...
more than the high
scores of a crack shot.
The accuracy of the Stevens
barrel is the result of best
material, best workmanship
and careful testing at every
point.

Our Catalogue of Firearms
will interest you. 140 pages,
describing different styles,
how to select a rifle, talk on am-
munition, and much other
valuable information. Send
4 cents in stamps to cover
postage, and we will send it
free. If your dealer cannot
supply you, write to us.

The Apiary

The Bee-Moth and Its Wax-Worm.
(*Galleria mellonella*, Linnaeus.)
Elbert S. Tucker, Museum Assistant in Systematic Entomology, University of Kansas, Lawrence.

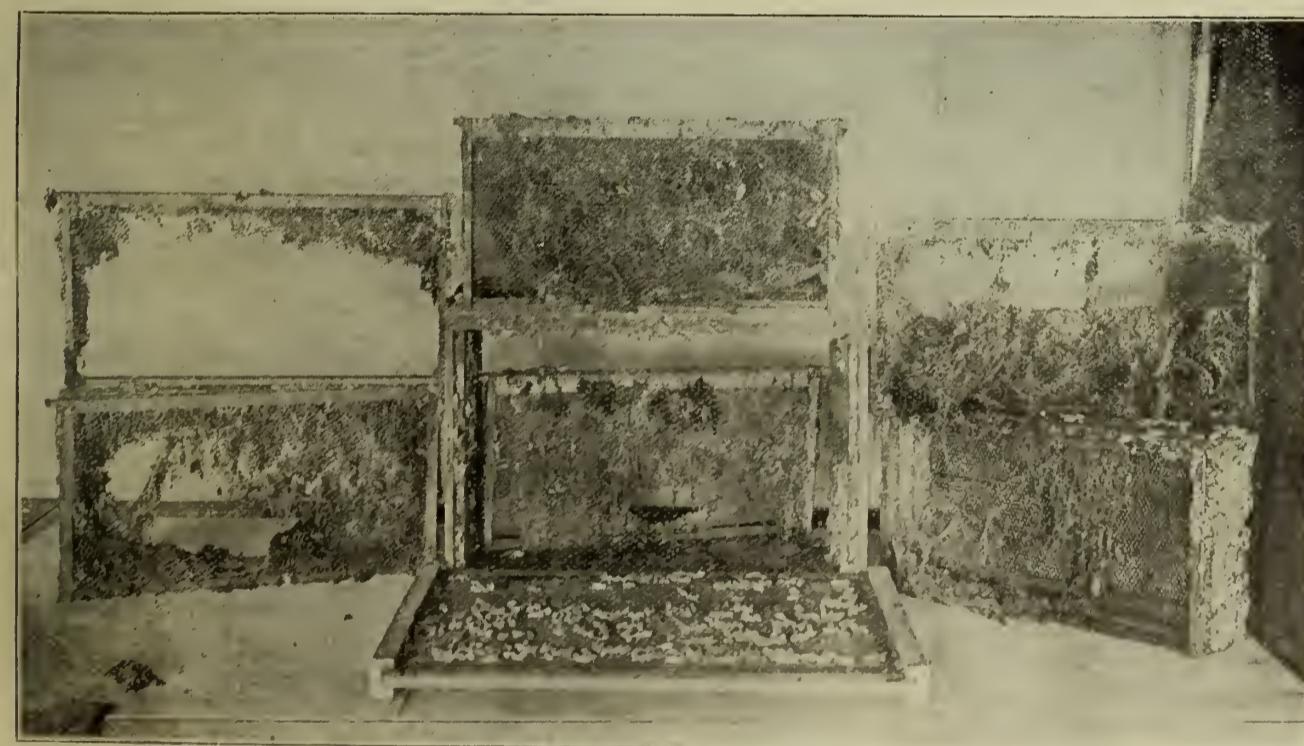

Bee-moths, sometimes called "wax-moths" or "beeswax-moths," are the slippery-sealed and stealthy parents of wax-worms. They fly from hive to hive at night, seeking entrance as a thief that tries to take advantage of the bees at a time of justly deserved rest, yet being obliged to act very quickly, since the bees are always ready to sting and tear their enemy to pieces with fury. Thus the mother moth risks her life whenever attempting to lay her eggs in a vigorous colony of bees. The eggs hatch out into very small worms or larvae which grow rapidly as they feed on the wax and stored pollen, ruining honey and brood cells by eating out galleries under protection of web lining which each one constructs as fast as it progresses along the comb, while the bees working there look on in dismay. When free from molestation of bees, as with stored or tenantless combs, the worms spin mazes of webs reaching from one comb to another, if

Wax-worm, natural size. (Drawn from "The A B C of Bee Culture.")

close together, and then feed voraciously under this screen. Their bodies are pale yellow in color and they grow to a little over an inch in length. At this period, they crawl into recesses of the hive and there each one envelopes itself by spinning a tough, white cocoon, which is proof against the stings of bees, and within, it undergoes transformation, finally emerging as a moth that becomes a parent of another generation of worms.

Two very badly infested hives were brought to the department of systematic entomology of the University of Kansas, on September 27, and the privilege of inspection was thus afforded that disclosed the effects of severest ravages wrought to the combs by wax-worms.

Bee-hive opened up with comb section

The accompanying photograph shows one of the hives opened up with comb sections displaying in a striking manner the extent of devastation that can be caused by these despoilers. Judging from the appearance of the remnants, but little work has been done by bees on the combs of either hive, as the foundations were only slightly built out into cells. When combs are left in a hive after bees have died, the robbers will multiply unchecked and become a menace to a whole apiary. For the greater part, only ragged portions of combs remained in the frames and these were riddled with galleries and overspread with filthy webs; the other frames contained nothing more than mats of blackened and tangled webs hanging to the wires.

Cooperation.

"Help one another," the snowflakes said,
As they cuddled down in their fleecy bed;
"One of us here would not be felt;
One of us here would quickly melt;
But I'll help you and you'll help me,
And then what a big, white drift we'll see."

"Help one another," the maple spray Said to its fellow leaves one day;
"The sun would wither me here alone,
Long enough 'ere the day is gone;
But I'll help you and you'll help me,
And then what a splendid shade there'll be!"

"Help one another," the dewdrop cried,
Seeing another drop close by its side;
"This warm south breeze would drive
me away,
And I should be gone 'ere noon to-day;
But I'll help you and you'll help me,
And we'll make a brook and run to the sea."

"Help one another," a grain of sand Said to another grain just at hand;
"The wind may carry me over the sea,
And then, oh, what will become of me?
But come, my brother, give me your hand;
We'll build a mountain and there we'll stand."

—Selected.

Possibilities on the Farm.

We are prone to go along the road of life with head and eyes down, failing to see the beauties and benefits of everyday life. In a talk to farmers—the time, place, and occasion of no importance—Mrs. Noble Prentiss spoke along this line of thought as follows:

"Among the finest of the innumerable splendid products of the Kansas farms, are the boys and girls that are growing up about us. And while you are educating your children in the free public schools, don't neglect the very important duty of teaching them to appreciate the magnificent beauty of the Kansas landscape; to understand what healthful benefits there are in this free Kansas ozone. Teach your children to see beauty in everything about them, for this brings health to mind and body. God has blessed us with a wonderful country and I advocate strongly that you should urge your children to stay in the country and not go into the city. Young people do not begin to realize the benefits of staying where they are well off, and they certainly are well off on these Kansas farms. There is where they can make the money, and it is not as it used to be before we had our telephones and our rural delivery. I want to congratulate you farmers on your beautiful country homes with the air of wealth and prosperity about them. You farmers of to-day are building fine modern homes, with bath, furnaces, telephones, acetylene lights and every modern convenience. And with the daily papers, monthly magazines, and mail delivered at your doors, and the telephones, it makes the very city seem to be set nearer and the former loneliness has been done away with. The farmers of this age have the sense to spend their dollars in travel. They make hay while the sun shines, then when the winter months come they take their families and go to California or some other equally delightful winter resort where they can see the sights and become broadened.

"I tell you another thing of which I am a strong advocate, and that is civic improvement in the country. Make your dooryards as attractive as possible and pride yourselves on the beauty of the country roads. I urge you to introduce domestic science into your consolidated schools. The girls will learn to do housework in such a dainty way that all of the drudgery will be removed and it will become an actual pleasure. I have recently visited the schools in Parsons, where they have a domestic science department and I watched the girls making biscuits and they never touched their hands to the dough. I just said to them: 'Why, girls, if I were doing that I'd have dough all over me.' They just laughed for that was the only way they knew how to do such work. The children are taught everything in these domestic schools and I think they are among the finest things of the age."

Art and Life.

ALICE E. WELLS, PRINCETON, KANS.

From the days of "mud-pies" to the close of earthly existence, the desire to "make something" has had a controlling influence over individual life. Looking backward to those same mud-pies, followed by clay marbles, bricks, and at last a veritable, molded-clay stove, carefully dried and tem-

pered with a "truly" fire, surreptitiously built, whereby to bake the pies, dry the bricks, marbles, and sculptured human forms, all of which led to deeds of greater valor, the question arises, do children have as good a time now as we used to? At eventide that group of nine gathered in the darkening parlor, and one after another, in turn, "made up stories," some of them "continued" into regular serials. Years have glided by and scattered members of the group continue to "make things" each according to his bent.

What influence on life has art? Much every way. The instinct for creation is a God-given one and, like all faculties bestowed, is a blessing if cultivated, a curse if neglected. Every material blessing enjoyed to-day is the emanation of somebody's fertile brain in practical demonstration, and is a silent historical record of the times in which it was created. The difference between civilization and barbarism of ancient nations is more clearly seen by the works of their hands than by written history. How little the Greeks thought or realized, ages before Christ, when they were carefully chiseling, mortising and putting in place huge blocks of marble, true in every detail—the length of pillar, just so many times the diameter of the base, every angle, groove and joint exactly adjusted—that thousands of years afterward, we, in making a study of Greek art, should find lessons of truth, beauty, purity, and strength from the works of their hands. To-day, in our homes the influence of what we are making is greater than the words from our lips, and exists for all time. Nothing is more artistic than straight lines, exact angles, and true curves. These principles may be applied to most of our work with surprising artistic effect. Simplicity of detail is helpful, too, in the arrangement of one's home surroundings, and is more restful to the eye and mind than elaborate display. The reflex influence on character-building is a sure accompaniment to careful handiwork. Concentration of mind on making true things, leads to careful speech, true thoughts, pure lives, and kindly care of friends. Then, too, life itself means so much more to those who look for and find or create the true, the beautiful, the artistic, if you please, in immediate environment.

Some Flowers of Easy Culture.

JEANETTE BROWN.

Sometimes the farmer's wife of artistic tastes finds the cultivation of flowers the "one straw that breaks the camel's back" in her busy life; yet, as summer draws to a close, she feels there has been a lack somewhere if there has been no bed or box of fragrant bloom to cheer her through the long, hot months.

The four flowers I have in mind which are peculiarly adapted to Kansas sun and soil, are the portulaca, the dwarf nasturtium, the coreopsis and the petunia. One good bed of any one of these will add the grace of refinement to any dooryard.

One of the most beautiful flower beds I ever saw—and by that I mean to include the parks of cities—was in Humboldt, Kans. It was circular, eight feet across, and outlined and protected from grass by a row of old bricks. The flowers were portulaca, and they covered the ground completely, and were a blaze of bloom through a long and drouthy summer. I was told that it was a bed of several years' standing, seeded itself, and represented an outlay of one dime.

The nasturtium is of the easiest cultivation. Like the portulaca it requires a sandy soil, not very rich. The flowers, which in the improved varieties, range through shades of red and yellow, must be gathered or the bloom will cease. It is highly decorative when the plants touch but do not crowd, and the blossoms are invaluable for table bouquets.

I have not words to express the sweetness and gratitude of the petunia. Given a space in the dooryard it will bloom there year after year, its dewy freshness and fragrance cheering the care-worn soul. The petunia is a favorite in Topeka, and has great spaces allotted it in the Capitol grounds.

My experience in growing the coreopsis is very happy. I had a small bed of the velvet brown variety; a few feet distant was a hedge of roses and the seed of the coreopsis blew and lodged

Home Made

Have your cake, muffins, and tea biscuit home-made. They will be fresher, cleaner, more tasty and wholesome.

Royal Baking Powder helps the housewife to produce at home, quickly and economically, fine and tasty cake, the raised hot-biscuit, puddings, the frosted layer-cake, crisp cookies, crullers, crusts and muffins, with which the ready-made food found at the bake-shop or grocery does not compare.

Royal is the greatest of bake-day helps.

ROYAL BAKING POWDER CO., NEW YORK.

Cheap Rate to California.

Californians raise gold—they don't mine much now. An easier way has been found than that! It is now obtained by farming. The alchemy of nature converts the oranges, lemons, olives, grapes, wheat, alfalfa and other products of the soil into good clothes, comfortable residences, and assuring bank accounts. 'Tis being done every day in California. Wouldn't it pay you to inquire into this? Better yet, why not go there?

Only \$25.00

From Topeka to almost all points in California and to many places in Arizona. Liberal stop-over privileges.

On sale daily, February 15 to April 7, 1906. Tourist sleepers daily on fast trains. Harvey meals.

For particulars, apply to

T. L. KING, C. P. & T. A.,
The Atchison, Topeka & Santa Fe Ry. Co.,
Topeka, Kansas.

along the hedge, where, the next summer, they made such a display of bloom that passers-by looked incredulous when told it was the plain garden coreopsis.

There is a great reaction in favor of garden flowers. For awhile the pernicious idea was entertained that bedding plants alone were desirable; now, in the most admired gardens, the "cottage flowers," as they are called in England, are on an equal footing with the costliest exotics.

The four I have mentioned embody the necessary requisites for the farmer's wife: sweetness, beauty and ease of culture.

Recipes for Croquettes.

Banana Croquettes.—Remove the skin and coarse threads from bananas, cut in half, roll in egg and sifted bread crumbs seasoned with salt and pepper, and fry for a minute and a half in deep, hot fat, draining on soft paper.

Hominy Croquettes.—Use one cupful of cold boiled hominy, a tablespoonful of melted butter, a saltspoonful of salt and one beaten egg stirred until smooth. Shape into balls, roll in flour and set in a cold place over night. Fry in hot fat.

Chicken Croquettes.—Melt one-third of a cupful of flour in one-fourth of a cupful of butter with a scant half tea-spoonful of salt and one-fourth of a teaspoonful of black pepper. When frothy add half a cupful of cream and half a cupful of highly seasoned chicken stock. Simmer for five minutes, then remove from the fire and stir in one well-beaten egg and one pint of chopped, cooked chicken. When cold, shape, dip in egg and bread crumbs and fry in deep, hot fat.

Boston Baked Beans Croquettes.—Take a pint of cold baked beans, press

through a sieve and then add three drops of tabasco sauce with two tablespoonsfuls of tomato catsup, shape into small cylinders, roll in sifted bread crumbs, cover with beaten egg, roll in more crumbs and fry in deep, hot fat.

Gerónimo's Eighth Wife.

Gerónimo, the famous Apache warrior, seventy-six years of age, believing life too strenuous without a helping mate, has for the eighth time become a Benedict. This proved startling news to his tribesmen at Lawton, Okla., for they were not informed of his wooing. Two years ago Gerónimo's seventh wife died, and since then he has been converted and become a Christian. His latest bride was Mrs. Mary Loto, an Apache widow, aged fifty-eight.

What to Read.

If you have the blues read the twenty-seventh Psalm.

If your pocketbook is empty, read the thirty-seventh.

If people seem unkind, read the fifteenth chapter of John.

If you are losing confidence in men, read the thirteenth chapter of I. Corinthians.

If you are discouraged about your work, read the 126th Psalm.

If you find the world growing small and yourself great, read the nineteenth Psalm.

If you can not have your own way in everything, keep silent and read the third chapter of James.

If you are all out of sorts, read the twelfth chapter of Hebrews.

Nine times out of ten the doctor doesn't know what is the matter with the patient—but he knows enough not to say so.

The Young Folks

Love That Endures.

True Love is but a humble, low-born thing,
And hath its food served up in earthen-
ware;
It is a thing to walk with hand in hand,
Through the every-dayness of this
work-day world,
Baring its tender feet to every rough-
ness,
Yet letting not one heart-beat go astray
From Beauty's law of plainness and
content;
A simple, beside thing, whose quiet
smile
Can warm earth's poorest hovel to a
home,
Which, when our autumn cometh, as it
must,
And life in the chill wind shivers bare
and leafless.
Shall still be blest with Indian-summer
youth
In bleak November, and, with thankful
heart,
Smile on its ample stores of garnered
fruit,
As full of sunshine to our aged eyes
As when it nursed the blossoms of our
spring.
Such is true Love, which steals into the
heart
With feet as silent as the lightsome
dawn
That kisses smooth the rough brows of
the dark,
And bathes its will through blissful gen-
tleness,—
Not like a rocket, which, with savage
glare,
Whirls suddenly up, then bursts, and
leaves the night
Painfully quivering on the dazed eyes;
A Love that gives and takes, that seeth
faults,
Not with flaw-seeking eyes like needle-
points,
But, loving kindly, ever looks them
down
With the o'ercoming faith of meek for-
giveness;
A Love that shall be new and fresh
each hour,
As is the golden mystery of sunset,
Or the sweet coming of the evening
star;
Allike, and yet most unlike, every day,
And seeming ever best and fairest now.

—James Russell Lowell.

Aunt Kate to Donald.

Chicago, March 3, 1906.

My Dear Donald:—Thank you for giving my letter such a dignified name, "A Rhapsody upon Country Life." I didn't write it for that. It was only an expression of an honest opinion, called forth by my contact with crowded city life; perhaps by the fact, too, that you were in sympathy with that feeling. It is proof of what good friends we are, that you write me for "some pointers" as you express it.

There have been yards—yes, miles—written in regard to the behavior of young people, and none of it does any good, unless the advised ones are really in earnest, and want to do what is accepted as the right and proper thing for young people in the same social circle. You say that you do not like some of the ways that your young friends have, when out at an evening party. You particularly mentioned a young girl who caught a small stickpin from her escort, which they both fought to possess. They were only sixteen or seventeen, were among those who knew them well, and had known each other from childhood. And yet from the very fact that you felt the freedom out of place, I think that it was neither good taste nor good manners to indulge in that kind of a friendly tussle.

It is hard for young people who are in each other's company often, not to relax and become more free and easy than is quite consistent with good manners. This is an argument in favor of not too frequent gatherings. And I am very sure that this is just where town young folks make a mistake.

Games are very apt to degenerate, and the old-fashioned "kissing games," as they used to be called, are now believed to be neither modest nor in good taste.

Then the question arises, "What can young people do, when part of the crowd do not dance, and many are prejudiced against cards?"

It is a very old problem. Donald. Lately I have been impressed with the fact that young folks work very hard for their good times. It seems to me that we didn't, at the not so very remote period when I was young, but I may have forgotten.

For instance, I know of a certain high-school crowd who decided to have an evening party that should be quite original, and different, and that every one present should join in and enjoy.

There were three on the party committee, and this is the result of their united efforts.

The young people were invited to a kitchen party. Two cooks (the boys who planned the affair) with the waiters received them.

A long counter had been arranged in the kitchen. The cooks in white caps

and aprons, cooked short-order suppers as the orders were called by the waiters.

It was of course a limited menu of Hamburg sandwiches, fried eggs, etc.

A card telling what would be served and at what price, hung beside the door. There was a cashier who received the checks for suppers, as at any well-appointed restaurant. This party was voted a perfect success; but at least five people planned and worked hard two days to accomplish the result, and I wondered if, after all, it paid.

What can have become of the "gentle art of conversation," when it becomes necessary to a good time, for somebody to plan such elaborate affairs?

I have been wondering if a crowd of young people who meet socially every week or two would not enjoy a conversation club, something like one I attended a short time ago. This club was as informal as possible, meeting at the different homes, and I believe having no officers.

At each meeting two of the members were asked to present topics for conversation at the next meeting. No one but the person giving the topic knew what it was to be beforehand.

Each member was allowed five minutes to talk upon the subject presented.

Matters interesting the world at large were chosen for discussion, and the different points of view upon the same subject were most interesting.

This was a club of older people, but why not for young people?

They want to be as well informed as to what is interesting the world, and as able to think and talk about it intelligently, as their elders.

The members of this Conversation Club tell me that it helps to keep them posted, makes them read more carefully items of public interest, not skimming over them as we are all too apt to do, and teaches them to express themselves in fewer and better words.

There were no refreshments served, and so it involved very little care for a hostess, and furnished a delightful and instructive evening which I found anything but dull.

I'm afraid I have helped you very little; but you must not think that your country neighborhood is any different from other places. Young people are much the same the world over, and the same difficulties and problems are before them all.

I remember years ago, a dear old gentleman saying to me, "Don't make the mistake of thinking that your chief object in life is to have a 'good time.' That may be one object, but it is by no means the highest or best one." I have thought of that many times since. Make your pleasures serve you; do not serve your pleasures. And always and forever, Donald,

"Be noble, and the nobleness which in other men lies sleeping,

Shall rise in majesty to meet thine own."

I hope I've said something to help a little. Your loving

AUNT KATE.

Essay on Boys.

WRITTEN BY A TEN-YEAR-OLD.

Boys are curious things, some of them have their way or none. It is a curious fact that it takes two boys much longer to do a piece of work than it does for one. Boys have a great way of helping each other do nothing. They are always getting into trouble, or getting somebody else in.

Boys receive the blame of the family. They are all the time hurting their feet, or stamping their sore toes, or falling down and hurting their arms.

Boys generally put everything that is not too large in their pockets. If any one were to ask a boy what was in his pocket, he would tell him a knife, a spool, half a dozen fishhooks, fishing lines, a whistle, a marble, a rock and every other thing he can find to put in it.

A boy loves to play and run. He wants a gymnasium at school and at home. And of course he has to play baseball and football. He likes to go to school when there is hard work to do at home. But on picnic days he wants to be excused so that he can learn to swim. (If the picnic is on a lake or river.) When he "hits his first flick" in swimming he thinks he can swim a long ways. And he is very proud of his success.

A boy likes to do chores, especially when it is to go to the store for some nails or something like that.

You hardly ever find a boy that would not play baseball when he thinks his side will win.

It is a boy's nature to be sick when the time comes to pull fodder and turn potato-vines or anything else that he does not like to do; but he is always well when fishing time comes around.

Distinctive Prints

Simpson Eddystone talcoes are distinctive. Exclusive designs in large variety and beautiful color-effects, printed on fabrics of superior texture, give them the distinction that for three generations has characterized "Simpson Prints." It is more marked now than ever before. The latest and best machinery and Eddystone art has made it so.

Ask your dealer for Simpson-Eddystone Prints.
In Blacks, Black-and-Whites, Light Indigo-Blues and Silver-Greys, Shepherd Plaid Effects and a large variety of new and beautiful designs.
Thousands of first-class dealers sell them.

The Eddystone Mfg Co (Sole Makers) Philadelphia

Lowell Ingrain Carpet

WHY YOU SHOULD BUY IT

Because: It has been recognized for seventy-five years as the best INGRAIN manufactured—ALL WOOL.

Because: The goods are wound on a hollow stick which constitutes a trade-mark and guarantees that you are getting a LOWELL INGRAIN.

Because: Styles and colorings are up to date, in plain shades and figured patterns; closely resembling high-grade carpeting.

Because: LOWELL INGRAINS are so woven that they can be used on both sides: a feature decidedly advantageous. No one doubts the wisdom of covering a room entirely in a rural home, making it warmer and easier taken care of.

Ask your local dealer for a LOWELL INGRAIN when looking for a new carpet. Look for the hollow stick and be satisfied with none other than a LOWELL INGRAIN.

Manufactured by BIGELOW CARPET CO., New York

A boy usually wants a dog, and if he gets one he wants to go hunting. Then if his father objects he gets sort of hot. And his dad uses a frail pole to cool him off. (I know by experience.) Then after the boy gets behind the wall, if you follow him and listen close you can hear him say: "Dum it all anyhow. I wish that dog had never been born."

The boy likes to milk and has his favorite cow and she generally gives more milk than the others. The reason of this is he "feeds her good," as he calls it and beats the others.

The boy generally stays at home to feed the chickens and milk the cows when the others go to spend the day with their neighbors. That is the part he does not like.

Boys are queer beings. Sometimes they are told that they wear out everything but soap, rags and working utensils.

A boy has to do the hard work in winter. He is after night getting the cows milked; and the cows aggravate him so bad, just because he is about to freeze. "The cow would not cut up so if he would not whip them," says his father. But he thinks different and he keeps whipping them when they kick at him, and it generally makes them worse but he doesn't think so.

A boy likes to have Christmas come for then he has a whole day to himself. When he gets the wood and water up by this time it is ten o'clock. But he is glad to get off that soon. In a boy's way he has a fine time—playing marbles, wrestling and boxing. If he is where the snow falls he gets his sled and joins a group of boys about his age. They have a fine time. Finally, when night comes the boy has to get in wood and then he is sent to bed soon so as to get an early start next day. But after all boys have a fine time.

Jimmie D., in Farm and Fireside.

The Madonna.

Loveliest and most exquisite of the pictures that adorn our homes are those representations of the Madonna that artists for ages have loved to paint. Still lovelier are the madonnas one meets as one goes about the world. In a suburban train, one summer day, an Italian peasant took her seat by my side. She was a mere girl, not more than sixteen. On her bare brown hand showed her wedding ring, and in her arms she held a tiny infant, a wee scrap of humanity. Her face was radiant with pride and joy. From time to time she lifted a corner of the veil that hid the little crumpled face of the bambino, peeped at it and looked up with an expression so angelic, so heavenly, that it made my heart warm.

"Please let me look," I said. And never queen, with greater triumph in possession, displayed her princely offspring than this youthful peasant mother showed her little child. "How old is he?" I asked. And the answer came, "Just three weeks old to-day." God bless her and every other mother

MACHINE OIL

\$3.50 A BARREL

You will find it a better machine oil than anything you have been buying for 35 cents to 45 cents per gallon. Premium Oil is a natural oil, greenish black in color. There is no made oil that is superior to Premium Oil for enginors, shafting, shops, elevators, thrashing machinery and farm machinery. It will not GUM, has good body, is not affected by hot and cold weather as most oils are. If a farmer, you say you won't need as much as a barrel. Get your neighbor to take half of it. But remember \$3.50 for a 50-gallon barrel, and the empty barrel is worth at least one dollar; gives you oil at less than 6 cents per gallon at your railroad station. If within 300 miles in Kansas freight will not be over 75 cents per barrel. Sample sent on request.

T. C. DAVIS, Benedict, Kans.
Benedict, Kans., August 26, 1905.

The Little Ones

Only a Little.

One little star in the starry night,
One little beam in the noonday light,
One little drop in the river's might,
What can they do, oh, what can they
do?

One little flower in the flowerful spring,
One little feather in one little wing,
One little note when the many birds
sing,
All are so little, feeble, and few.

Each little star has its special ray,
Each little beam has its place in the
day,
Each little river drop impulse and sway,
Feather and flower and songlet help,
too.

Each little child can some love-work
find,
Each little hand and each little mind,
All can be gentle and useful and kind,
Though they are little, like me and like
you.

—Susan Coolidge.

Letter from a Kansas Boy Eight Years Old.

Los Angeles, Cal., Feb. 23, 1906.

Dear David:—I hope you are well now. We had vacation yesterday and to-day. Hurrah for George Washington! We went to the beach yesterday. The ocean is fine. Papa and I waded in it. The place is called Venice. They have canals instead of streets. We went out on the pier and saw them catch fish. The ocean breeze makes you awful hungry. It is worse than camping. We had hot tamales with our lunch. They are good. I wish you had been with me. Patricia was as happy as a bird. We don't know when we are coming home. I passed at school. Mamma says my writing gets worse all the time. Have you read "The Wizard of Oz?" It is 8 o'clock here. I suppose you are asleep. If you were here we would climb a mountain to-morrow. Say hello to Charlie and Curtis for me. Good-night.

MISCELLANEOUS PROGRAM.

The Race Question.

I. The black man's rights.
II. The white man's duty.
III. Transport or educate?
I. The race question is well worn but will bear further discussion. Topic I may embrace the question of equal opportunities with the white man, his rights in the commercial and political world, and his right to use public thoroughfares and utilities. It may also show the attitude of the different localities towards the negro and the reasons for the same.

II. Since the negro is here not by his own free will but was brought here by the white man, is the latter under obligations to him? Is he or is he not

A Food to Work On

Work! Work!! Work!!!

Lots of energy is needed to keep up the pace. In the struggle, the man with the strong body and clear brain wins out every time.

The man of to-day needs something more than mere food; he needs a food that makes energy—a food to work on.

Although some people may not realize it, yet it is a fact, proved and established beyond doubt, that soda crackers—and this means **Uneeda Biscuit**—are richer in muscle and fat-making elements and have a much higher per cent. of tissue-building properties than any other article of food made from flour.

That this is becoming known more and more every day is attested by the sale of nearly 400,000,000 packages of **Uneeda Biscuit**, the finest soda cracker ever baked. An energy-giving food of surpassing value—sold in a package which brings it to you with all the original flavor and nutriment perfectly preserved. Truly the food to work on.

Whoever you are—whatever you are—wherever you work—**Uneeda Biscuit**.

NATIONAL BISCUIT COMPANY

5¢

families which is an every-day delight throughout the long winter.

Then a banquet was held in January, after all the holiday parties were over. There were a few invited guests. A good program was furnished by the musicians and reciters of the club, with remarks by the gentlemen; after which the gentlemen chose their partners for supper, "a la Mother Goose," and each Father Hubbard led his Mother Hubbard to where there were all sorts of bones from the cupboards.

In February, we surprised one of our members who moved away the first of March, taking with us our luncheon, and we had a royal good time. In the month we arranged by telephone a surprise on one of our young ladies who was to be married the next week, taking along not only our refreshments but a silver cake-basket and cream-ladle as well.

A meeting of the club for payment of dues, filling vacancies, and making of year-book, was called for the first of March, and a visit is proposed to the art exhibition to be held by the clubs of Osage City on March 16 and 17. On April 12 the club begins its work for 1906.

One thing I have forgotten. At the close of last year's work there were committees of two ladies appointed from each of the four districts over which the club membership extends, to cooperate with the teachers in the districts in purchasing pictures for the schoolhouses. First there was given an entertainment by the club, for the raising of money to be divided into four parts, then each school district held during the winter an entertainment, the programs being furnished by the pupils, aided by gramophones, each district having all the money raised by its members. Then the club committee and the teacher of each district made their own purchases. A delegation of club members visited the schools and examined the pictures, the choice of which has been excellent. Addresses were made to the pupils who gave rapt attention. One school had the tomb of Washington at Mt. Vernon, a chromo done in autumn colors. One of the club members who had visited Mt. Vernon had the closest attention while she related her visit and recounted the many wonderful and historic relics to be seen there.

MRS. IDA M. FERRIS.

Osage County.

responsible for his welfare to a certain extent? Does the white man owe him sympathy, help, protection, justice and charity? These are a few suggestions for this subject.

III. Booker Washington once said in an address, "The negro is here and here to stay. If you should transport negroes by the shipload, another shipload would be born before breakfast." The possibility and advisability of sending the negro out of the country back to Africa, may be discussed in connection with the pros and cons of educating him. If he is to be a citizen of this country, shall he be among the best or among the worst?

MRS. I. D. GRAHAM, Secretary.

Domestic Science Club.

WORK FOR THE COUNTRY CLUB IN WINTER.

City clubs disband for the summer, country clubs hibernate in the winter. Sometimes our city sisters have a picnic during hot weather but they usually manage to have such affairs early in the season before they close for the summer. The country sisters can not hold their club meetings during winter—the days are too short, and there is crowded into them too much work; besides, there are the children to get off to school, and supper must be nearly ready when they return at night, hungry as bears. Then, there is no eldest girl to leave the baby with or to care for Buster, and the weather is too uncertain to take them along. If upon an occasional pleasant afternoon, the children are over their colds or tonsilitis sufficiently to be taken abroad, you hesitate long before you venture to drive the horse with those children along, after it has stood shivering in the cold for three hours. One such experience would convince you that you would not be justified in risking life and limb for the sake of attending a winter club.

City clubs arrange for about three receptions during the winter. The country club can not arrange for any, as the evenings are too short in winter and men and teams are too tired to attend them in summer. There ought to be some way provided whereby the young people and husbands can have some of the social benefits of the club. Perhaps it will be of interest to our country sisters to learn how the Domestic Science Club obviated that difficulty.

In the first place we arranged for a traveling library for the use of club

Miscellany

The Production of Good Seed-Corn.
C. P. HARTLEY, U. S. DEPARTMENT OF AGRICULTURE, BEFORE THE KANSAS CORN BREEDERS' ASSOCIATION.

The great interest that is manifest throughout the United States recently regarding the increase in production of corn per acre by proper selection and care of seed, rests upon the fact that in this way the profit of corn-growing can be greatly increased without an increase of labor or expense. There is no urgent need of the United States' increasing its production of corn. We now grow three-fourths of the corn produced by the entire world, but it is grown by processes that are too laborious. Our yearly crop of 2,500,000,000 bushels should and could readily be produced upon half the amount of land that is now used in its production. Think of the great amount of labor of plowing, planting, and cultivating that would be saved if the corn-crop of the United States were produced on 45,000,000 acres instead of the 90,000,000 acres now used. One of the principal means of accomplishing this great saving of labor is by the planting of better seed.

There remains much to be learned about this the most valuable crop of our country, but if the facts we now know were taken advantage of by all corn-producers, our average yield per acre could be raised from 25 to 40 bushels per acre in one year's time.

ENVIRONMENT.

We know that plants adapt themselves to their environments. The cypress has become adapted to growing in swamps, and pine- and cedar-trees are often grown in dry locations in the crevices of solid rocks. A change of the cypress to the rocks or of the pine to the swamp would be disastrous. The trees would not become accustomed to the changed conditions.

The corn-plant is no exception to this rule. Some varieties are accustomed to the long growing season of the South and others to the short growing season of the North. Further than this some have become adapted to rich lowlands and others to the poorer highlands. These varieties, if changed from one condition to another, cannot be expected to succeed well till they become adapted to their new conditions.

We sometimes hear a corn-grower state that he must send off and get some new seed-corn; that he has been growing one kind so long on his farm that it has "run out." Perhaps his strain of corn has "run out" or run down in production but it is not because he has been growing that kind of corn on his farm so long. It is because he has not kept it up by the selection of good seed. The best dairy herd in the world would run out if placed in the hands of a man who would pay no attention to its breeding.

We have good proof that the longer a corn is grown under certain conditions of soil and climate, the better it becomes adapted to those conditions. This is shown by the fact that the best corns we have are those strains that have been grown for many years under the same conditions and have been improved by careful selection.

Through the painstaking labor of such corn-breeders as James Riley and James L. Reid some sections are blessed with good strains of corn, but the majority of States are falling below their possibilities because there have not as yet been bred productive strains of corn suited to their conditions. The greatest need of the country in regard to corn-production is the need of careful corn-breeders, located in different parts of the United States, who will by means of the best methods known breed uniform and highly productive strains suited to their respective localities.

METHODS.

The methods to be employed in the breeding of highly productive strains of corn are based on the same principles as those of animal-breeding. The secret of the work consists in constantly breeding from the best, knowing that with certain variations "Like begets Like." If each kernel on an ear of corn should produce an ear exactly like the ear from which the kernel was taken, improvement would be impossible. Coupled with the tendency of seed to produce like the parent plant is a variation of individuals which makes improvement possible. While all kernels of an ear produce ears much like the parent ear some will be better and some poorer. The work of the breeder is to save seed from the best,

and by best is meant the one that produces most abundantly.

Of two ears equally good from all appearances, one may produce twice as much as the other. This has been demonstrated again and again. In some instances half of the seed from each ear has been planted in one location and the other half in another, by this method proving that it is the inherent tendency of some ears to produce well and of others to produce poorly that causes the variation in production, and that the variation can not always be attributed to the better location of certain rows in the field. Furthermore, it has been demonstrated that in many cases the progeny of the productive ears inherit the power to produce bountifully.

It is evident, then, that in order to breed for increased production, we must determine the relative power of the seed-ears to produce well so that we may save seed from the progeny of productive parents.

This brings us to the necessity of planting separately the seed from individual ears in a manner that will fairly test the relative tendencies of the ears to produce. The location even of different rows in the same field influences production so much that it is advisable to choose locations where the soil is very uniform and plant some of the kernels from each ear in two different locations. When this is done it is quite safe to assume that the ears that have produced best in the two locations have done so because of their inherent tendencies for greater production. While it is not the object of this paper to lay down a particular plan and say that it should be adhered to, it should be said that for greatest success it is necessary to adopt some plan of planting that will prove the relative power of the seed-ears to produce. This is just as necessary as it is to know the record of the individual animal in breeding for butter production.

COMPARATIVE TESTS.

Right here let me mention the importance of making comparative tests of the producing powers of the seed-ears one season, and reserving a portion of the kernels of each ear tested, so that the next year a breeding-plot can be planted with seed from the ears of highest producing power. In this way it will be known that all the stalks in the breeding-plot came from high-yielding ears. Unless the ears are tested one season and only the most productive planted in the breeding-plot the next season, it often becomes advisable to detassel the stalks in some of the poorer rows in the breeding-plot to prevent the pollen from the poorer rows from pollinating the silk in the good rows.

As soon as the necessity of testing the producing power of individual ears and of preventing undesirable stalks from forming pollen is emphasized, there arises strong argument to the effect that the average farmer has no time for the necessary details. If one can purchase well-bred seed adapted to his conditions, it is not necessary that he become a corn-breed. It is not necessary that every corn-grower be a corn-breed. In order that every grower may plant well-bred, acclimated seed it is necessary that we have a corn-breed for every section that has distinctive soil and climatic conditions.

If you have within your locality a conscientious corn-breed, you are fortunate and you should give him your hearty support. If you have none, it is time that some one among you take up the work and do it so well that your neighbors will see the effects in the splendid crops you produce. Then they will want some of your seed. Probably they will want you to exchange corn with them bushel for bushel, but after you have bred a more highly productive strain of corn you are entitled to three or four dollars per bushel for your seed.

CORN BREEDING PROFITABLE.

A conscientious corn-breed will usually have no difficulty in disposing of his seed at a profitable price to himself and to those who buy. It is profitable to pay \$6 per bushel for seed that will produce fifty-three bushels per acre rather than plant seed that costs nothing and produces but fifty bushels per acre.

The fraudulent practices of some men who advertise extensively and sell as well-bred seed-corn, corn that possesses no merit has caused many to discredit the importance of good seed. As precaution against being imposed upon in this respect, it is best always to purchase seed-corn as ear-corn and to purchase but a small quantity unless the honesty of the seller and the merit of

Williams' Shaving Soap

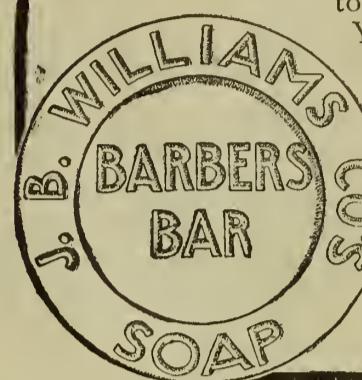

Williams' Shaving Soap "will not smart or dry on the face."

You know how common soap dries up into a scum—how it burns and smarts. You can avoid it all by using Williams' Shaving Soap.

THE J. B. WILLIAMS COMPANY,
Dept. A, Glastonbury, Conn.

Good Galvanizing

is what gives wire fence long life. Some manufacturers say their fence is made of extra heavy wire, and therefore resists the action of rust longer. What a confession! If the wire were properly galvanized there would be no rust for many years. When rust once begins, it will destroy even a heavy wire in a few seasons. The practical way, therefore, is to use wire of a size sufficient to give ample strength to the fence and to protect the wire from rust by good galvanizing. We have special arrangements with a large manufacturer of galvanized wire to have our representative always on the ground at the wire mill to see to the proper galvanizing of our wire and to reject all wire not properly galvanized. "Steel for strength, and galvanizing for protection," is our motto.

Construction. Advance Fence has the continuous stay. Our stay is not cut at the top or bottom, or anywhere else, but runs continuously up and down across the fence and without an end for many rods. Thus, we preserve and utilize all the strength of the wire used, about half of which is wasted in fences with cut stays. Our fence has the most perfect provision for expansion and contraction, caused by changes in temperature. It can be stretched over uneven ground without the slightest difficulty.

Buy Fence Direct from the factory. It is cheaper, and so much more convenient. We offer a line to select from several times as large as that carried by the best dealers—26 styles and heights of fence and 24 styles and sizes of gates, besides stretchers, etc. This enables you to get a fence exactly suited to your requirements, which alone may effect quite a saving for you.

Thirty Days Free Trial. Place your order with us for what fence you need and try it. If you do not like it, and it is not just as represented in every particular, you can return it to us at our expense, and we will return your money. That's what we call a fair proposition. We could not make it, if we were not sure Advance Fence would please you.

We Prepay Freight to any steam railroad station in the United States, on 40 rods or more. Thus you know beforehand just what your order will cost you delivered at your door. We guarantee the safe delivery of your shipment by the railroad company.

Outbuildings complete in every respect and in first-class condition. Good fencing. Large silo, filled for winter. Two dwellings on place for manager, etc. Good washing facilities with large storage tank. Excellent herd of cattle and well-equipped dairy. Good land and whole farm can be cultivated. Excellent opportunity to purchase first-class, well-equipped dairy farm. M. V. RICHARDS, Land & Industrial Agent, Washington, D. C.

the seed are well known by the purchaser.

Until the time arrives when we shall have skilled, conscientious corn-breeders in the various sections of the United States, it will be necessary for many farmers to select and care for their own seed-corn, and the profit on their corn crop depends very greatly on the way in which the seed is selected and preserved.

Seed-corn should be selected from the standing stalks soon after the corn ripens. If one is growing a strain that produces several ears per stalk it is necessary to see the entire production of the stalk before it can be determined whether it is a suitable individual from which to save seed. In working with strains that produce but one ear per stalk some progress can be made by studying the characters of the ears but it is best to know from what kind of stalks the ears were taken. This can be known only by selecting seed-corn from the stalks as they stand in the field or seed-plat. We have had brought to our attention to-day by Professor Lavitz, the great superiority of plant-selection over seed-selection. His work relates to wheat and other small grains but the principle applies also to corn. It is time for corn-breeders to give more attention to the plant, its location in the field, its ability to withstand untoward conditions as drouth and wind, its freedom from suckers, disease, etc., for these undesirable stalk characters are transmitted to the progeny.

In a recent experiment conducted by the Department of Agriculture it was shown that with the Blount Prolific corn, seed-ears taken from stalks that possessed one or more suckers, and which had been hand-pollinated with pollen from stalks possessing suckers, produced a crop having 14½ per cent of suckers. Other ears taken from stalks having no suckers and which had been hand-pollinated with pollen from stalks having no suckers, produced a crop having but 2½ per cent of suckers. This shows the possibility of producing strains of corn free from suckers and such strains are quite desirable. Suckers sap the ground to almost the same extent that an equal number of stalks would, and they produce inferior ears or none at all.

CHARACTER OF STALK, EAR, AND KERNEL.

It is not necessary here to take up the character of good seed-ears. These points you are studying in connection with the corn-judging work now in progress. One thing of much importance is to get the desirable characters of stalk, ear, and kernel clearly in mind and each year breed from individuals that adhere closest to the type. If this is diligently continued, the tendencies of the plants to reproduce their stalk, ear, and kernel characteristics will year by year bring the corn closer to the ideal type.

Highly desirable plants, bearing especially good ears, are not numerous, especially in a corn that has received little breeding. No one who expects to save his own seed-corn can afford to mix his best seed-ears with others less desirable. The very best should be planted in a seed-plat, which, if complete isolation is not practicable, may constitute an acre or more in a field of the same kind of corn.

There is always a great liability that any work that does not have to be done at a particular time will not be done at all. This is too often the case with the selection of seed-corn. The apples must be picked, potatoes dug, etc., or a freeze will ruin them. If seed-corn is not properly selected in the fall, the loss is as great as would result from a failure to gather the apples or dig the potatoes, but the loss does not become apparent so quickly.

It is not a question as to whether it pays to select good seed and take proper care of it. It is certain that it does. None can afford to neglect it. This is shown by a demonstration made by the Department of Agriculture of the profit resulting from attention to good seed. In a field of a strain of corn that had been grown in Ohio for fifteen years, ten acres were measured off and gone through carefully for the purpose of obtaining seed from the best plants. Seventeen bushels were obtained and from this enough of the very best ears were selected to plant ten acres at the side of a 65-acre field, the rest of the field being planted with other good ears from the 17 bushels. The ten acres where the very best seed-ears were planted averaged 96 bushels per acre. The remaining 55 acres of the field averaged 94 bushels per acre and other fields surrounding and on equally good soil and similarly treated, but planted with seed taken at planting time from the crib, averaged but 90 bushels per

REAL ESTATE.

FOR SALE—A good farm of 320 acres in Anderson County, Kansas, main line Missouri Pacific Railway, R. F. D., near to school and church. American community, good improvements; \$22 per acre. A bargain. Address O. J. Prentiss, 156 Wabash Avenue, Chicago.

FOR SALE.—640-acre ranch, 4 miles from Stockton, Kans.; big bargain of 320 acres at \$8 per acre. Write STEVENS & RUBY, Stockton, Kans. Mention Kansas Farmer.

Nemaha County Farms
Nemaha County, Kansas cannot be excelled in the production of Corn, Oats, Millet and Speltz. Alfalfa, Clover and Blue Grass have no equal. Write for prices and description. KNIGHT & SPICKELMIER, Centralia, Kans.

FOR SALE

Farm 2,160 acres, 570 acres in wheat. 1,800 can be farmed. I also have 150 steers, horses and outfit. Will sell at a bargain. C. W. Phillips, Greensburg, Ks.

A CORN AND ALFALFA FARM.

FOR SALE—One of the richest improved farms on Prairie Dog Creek. Soil is black loam that yields big crops every year. This year an average of 60 bushels of corn, about thirty acres in pasture and timber, 15 acres in alfalfa, balance corn land. Good house and barn and other farm buildings. On account of change of business the owner desires to sell soon.

M. E. Beall, Woodring, Kans.

If you have farms, ranches, or city properties for sale or trade anywhere in the State, we would like to have you list the same with us by sending a thorough description together with lowest prices and best terms. We have a fine list of city properties in Topeka and farms around the city, some for trade.

aera. Good seed increased the yield 16 bushels per acre. No corn-grower can afford to neglect selecting his seed in the fall and caring for it properly.

STORAGE CONDITIONS.

Another test will be described to show the effect good care during the winter has upon the power of seed-corn to produce.

About ten bushels of ears were selected from standing stalks at ripening time and divided into two similar lots. One lot was placed under crib conditions and the other lot dried gradually and quite rapidly and kept dry and at a comparatively even temperature during the winter. One lot was placed in one box of a planter and the other lot in another box, and in this way seven acres were planted on river-bottom soil and twenty on upland soil. By planting in this manner there were throughout each field two rows planted with well-preserved seed alternating with two rows planted with the seed that had been subjected to crib conditions. This method was followed in order that the two lots would have equal locations regarding soil.

The well-preserved seed produced on the bottom land 85½ bushels per acre and the cribbed seed 67 1-3 bushels, a difference of 18 bushels. On upland the seed that had been well cared for

produced 64 bushels per acre while the rows planted with the lot kept under cribbed conditions produced 57 bushels per acre. We here have an increase of 18 bushels per acre on the river-bottom and 7 bushels per acre on the upland as profit for having simply taken good care of the seed. The point of particular interest is that both lots of seed germinated equally well and that the greater production was due to the greater vigor of the plants that grew from the well-preserved seed. The average yield per stalk was greater than that of the plants growing from the seed subjected to crib conditions.

The opinion is too prevalent that if seed-corn will grow it is all right. It is not only necessary that it grow, but it should grow vigorously. Some animals live and grow but yield no profit because they do not grow vigorously. The germ of each kernel of corn is alive and if it is to be used as seed and expected to grow vigorously it should be well cared for from the time it matures in the fall.

Grapes and pineapples are blessings in the sick room. Only the juice of either should be swallowed. It relieves thirst and is nourishing, acting upon the liver and kidneys beneficially.

KENNEWICK LAND CO., - - - KENNEWICK, WASHINGTON.

NAMPA, IDAHO

A railroad center of Southern Idaho, surrounded by 300,000 acres of magnificent farming and fruit lands. Only one-fourth of these lands are under cultivation. The UNITED STATES GOVERNMENT has appropriated \$11,000,000 to develop the water supply and work will begin in February this year. A beet sugar company has secured contracts on 6,000 acres of land and are now erecting a \$1,126,000 factory within the city limits and will handle the crop of 1906. We have just built an alfalfa meal plant to grind up the surplus hay and ship it away in sacks. A brewery company has just secured a site and will put up a \$40,000 plant. This will help the hop industry. A flour mill company is seeking a site and one will soon be located. You can not fail to see that all of these enterprises locating at the same time in a town of about 3,000 people will double and thruple its population in the next two or three years. We raise 5 to 8 tons of alfalfa per acre, 300 to 500 bushels of potatoes, two crops of timothy and clover, 20 to 60 bushels of wheat, 60 to 100 bushels of oats, 60 to 70 bushels of barley. All fruits raised to perfection. Write the NAMPA CHAMBER OF COMMERCE.

Address, RATEKIN'S SEED HOUSE, Shenandoah, Iowa. (The largest Seed Corn Growers in the World.)

SEED CORN
There are many points to be considered in selecting seed corn; some of the most important are outlined in the above cuts; namely, well filled out at butt end with small to medium sized shank; the tip of ear well capped or covered over with fair sized grains, the kernels should be wedge shaped from cap to where it rounds off at point or germ end, and the rows should be close together but still not so tight as to smother the germ and cause mould. The grain must be deep and set on a small cob which is of such texture that it will dry out easily and quickly. These points are all brought the nearest to perfection in the new

GOLDEN WEST

IOWA SEED CO., DES MOINES, Ia.

Horticulture

Manchurian Walnut.

EDITOR KANSAS FARMER:—Is the Japan walnut hardy in this State? Has any one tried the Manchurian walnut in this State? WM. H. EDMISTON.

Lyon County.

Mulching Grapevines.

EDITOR KANSAS FARMER:—I mulched my grapevines for two years. Will it do to keep on mulching them year after year on top of old mulching? I use wheat straw and spoiled hay.

Will some of the readers of the KANSAS FARMER give me the desired information?

McPherson County. B. REICHERT.

We do not think it advisable to mulch grapevines heavily and continuously, but where they have been mulched so long it is doubtful if a change would be desirable. Prof. H. E. Van Deman says of grape culture: "If you mulch once you must keep it up; mulching brings the roots near the surface and if removed is certain death."

If mulching is discontinued, great care should be taken until a set of fibrous roots is established deeper than you have them at present. Very shallow and frequent cultivation, so as to preserve moisture, would be best; otherwise, dry weather might seriously injure your vines before a normal condition of roots is established.

WALTER WELLHOUSE.

Catalpa Seeding.

EDITOR KANSAS FARMER:—When and how should catalpa seed be planted?

Reno County. B. A. E.

We can not do better than to quote Mr. John C. Teas, a gentleman who has had a wide experience with the catalpa:

"Catalpa seed is very light and thin and does not require soaking, freezing or other preparation as other seeds do. The best time to plant is after the ground has become somewhat warmed by the sun and spring frosts are mostly past—say April or May. The ground should be made mellow and smooth by plowing and harrowing, and laid off in drills about an inch deep and three and one-half or four feet apart—unless it is a small lot to be worked by hand, when the rows may be about two feet apart; in larger lots, most of the work can be done with horses and cultivator. The rows should be laid off straight, by line, both for appearance and convenience in cultivation. The drills may be made with a corn-marker, laying off two or three rows at a time; for a small patch the corner of the hoe answers very well.

"Choose a still day for planting, or if obliged to plant in windy weather the seeds must be wet or they will blow away before you can cover them. After wetting we sift dry dirt among them to prevent their sticking together. The seed may be strewn along pretty thick in the drills and carefully covered with fine dirt, scarcely an inch deep. In lighter or sandy soil they will, of course, bear to be covered deeper than in heavy clay. A dozen little trees coming through the ground together, can by their united strength heave up and break the crust, where one or two would fail to get through and thus perish. If they come up too thickly, they may be thinned and transplanted in damp weather as readily as young cabbage plants.

"The ground should be firmed in the rows after the seed is planted, and if dry weather follows planting, we would water them." WALTER WELLHOUSE.

40,000 Apple Trees.

A fine lot of Jonathan and Missouri Pippin 4 to 6 feet high, for sale at Wellhouse orchard. Address H. S. Bullock, Tonganoxie, Kans. Price 4 to 8 cents.

Spraying of Fruit Trees.

E. L. STEPHENS, CRETE, NEBR.

WHEN TO DO IT. WHAT TO DO.

So many inquiries regarding how and when to spray are coming in our mail that it seems wise to answer through a newspaper article. Not many years ago fruit-growers were saying to each other, "Is it worth while to spray? Do the benefits exceed the expense and trouble?" Now the question has changed and is "how must we spray to secure the best results?"

In all of the older districts of the State unsprayed orchards have a large percentage of wormy fruit and many of them are subject to fungus diseases. We are now compelled to face the problem of how best to guard against the codling-moth and the equally difficult

question of how to combat and control fungus diseases.

The increasing humidity of our climate favors the production and rapid dissemination of fungus spores. Fortunately Bordeaux mixture used in combating fungus diseases may be combined with the arsenical poisons used in destroying the larvae of the codling-moth. Labor is saved by combining both in one application.

CODLING MOTH.

In order intelligently to direct our attempts to destroy the larvae of the codling-moth we must know something of its life history. This insect winters in a pupa form in a silken cocoon or covering. It usually seeks shelter under the rough scales of bark on the older trees and in numerous other places. The time of development of the moth the following spring varies greatly with the warmth of the weather and the nature of its hiding place. Nature teaches the moth to remain dormant until the warmth of the spring has brought orchards into bloom.

Researches made at our Nebraska Experiment Station indicate that the moths deposit their eggs chiefly upon the upper side of the leaves, occasionally on the apples. These eggs hatch in eight to ten days, according to the weather. The larva when it emerges is about an eighth of an inch in length, its head being the most prominent part. It soon begins to seek for an apple on which to feed and for a hiding-place in which to protect itself from its enemies.

The examination of a large number of apples indicates that 80 per cent of the larvae enter the apple at the base of the calyx lobes which have already closed, thus preparing a convenient cover until it can work its way into the fruit. The larva soon reaches the center of the apple, attaining full growth in ten to fourteen days. It then hunts for a convenient hiding place in which to spin its cocoon. This habit leads to the banding of trunks of trees which will be explained later.

WHEN TO SPRAY.

Since the eggs are not deposited until a considerable period after the bloom has fallen, it is unwise to spray while the trees are in bloom. There is nothing to be gained by spraying while the trees are in full bloom, since that is a number of days in advance of the appearance of the larvae and is dangerous to bees working in the blossoms.

Carefully conducted tests at the Illinois Experiment Station also show that to spray while the apple is in bloom interferes with pollination. Hence it is better to wait until the petals have fallen and pollination has taken place, spraying just before the calyx closes.

Since eighty per cent of the larvae enter the apple at the base of the calyx our opportunity for destroying this percentage lies in placing some insecticide within the calyx of the apple before it has completely closed. This allows us from four to six days time between the falling of the petals and the more or less complete closing of the calyx which prevents the lodging of the poisons therein.

As all varieties do not bloom at the same time, commence by spraying the early blooming varieties and close with those which bloom later. The Genet, popularly known as Janet or Jeniton, blooms ten days later than the early-blooming varieties. The success of this spraying depends on its thoroughness, it being by far the most important of the entire season since all the larvae which escape at this period pupate and produce the second brood of moths, which is much more difficult to control than the first.

The next spraying should be done within ten days thus serving as a check to overcome the defects of the first application and also to destroy the later larvae of the first brood.

The third spraying should be, for the latitude of Lincoln, Neb., about the later days of July, aiming at this time to destroy some portion of the second brood. Should the orchard be suffering from canker-worm or bud-moth it may be necessary to make an earlier spraying just before the blossoms are showing a tinge of pink and before they open.

WHAT TO USE.

Within the last three years our most careful scientists and successful orchardists have been experimenting with arsenate of lead and Disparane. These two poisons are said to be nearly alike in their composition. Disparane is composed of sugar of lead and soda arsenate.

Very careful tests in Colorado have shown three sprayings with Disparane to be more effective than four or five applications of Paris green. Arsenate of lead and Disparane in composition

STARK FRUIT BOOK shows in NATURAL COLORS and accurately describes 218 varieties of fruit. Send for terms of distribution. We want more salesmen.—Stark Bros., Louisiana, Mo.

Seed Oats

50c a bushel and up. The cheapest, heaviest, best yielding Oats are Ratekin's Reliable Grown, pure stock, Ratekin's New Sensation, Early Champion, White Russian and Texas Red Rust proof. Write for big catalogue, gives full descriptions of these oats, and all farm seeds, free. A postal will bring it. Address Ratekin's Seed House, Box 19, Shenandoah, Ia.

World's Premium Seed Corn,
HOWARD COUNTY WHITE

Awarded first and third premium at State Corn Show in St. Louis 1904, and gold medal at World's Fair in 1904. Has won all premiums wherever shown for the past six years. Hand nubbed and graded, making all grains uniform in size. For particulars address,

E. T. LONG, Fayette, Missouri.

50 BULBS
25 Cents.
Will grow in the house or out of doors. Hyacinths, Tulips, Gladiolus, Crocus, Fuchsias, Oxalis, Tuberoses, Begonia, Jonquils, Daffodils, Chinese Lily, Dewey Lily, Gloxinia, Lilies of the Valley—all postpaid, 25c. in stamp or coin. As a premium with these bulbs we will send FREE a big collection of flower seeds—over 200 kinds. HILLSIDE NURSERY, SOMERVILLE, MASS.

All Seed Risks
are covered by our three warrants. By this we mean that **GREGORY'S SEED** shall always be fresh, pure and reliable. Our free catalogue also contains a lot of valuable farm and garden facts. J. J. GREGORY & SON, Marblehead, Mass.

ARDEN SEED FROM A GARDENER
If you want to have the finest market garden you ever grew, get your seed of a market gardener.
HENRY FIELD is a successful market gardener as well as a seedsman. He tests all the seed in his own garden before he offers a grain of it for sale. He doesn't claim all kinds of impossible things for his seed. He's honest in his statements and pictures and you'll appreciate his way of treating you. Write for the catalogue today. It's free.

1 Bentzia	1 Boston Ivy
1 Bridal Veil	

20 Hardy Plants from 4 to 5 ft. tall. This entire collection, only \$5.00. Send your order early and we will send this fine collection, worth twenty-five dollars, enough plants to beautify your home, for only \$5.00. It is a great bargain. Order quick and be sure of them.

NATIONAL PLANT CO., Somerville, Mass.

are very much like white lead. Their great adhesive qualities make them superior to Paris green and all other insecticides. These poisons have the further advantage that they are not likely to burn the foliage.

Two pounds of arsenate of lead or of Disparcine used with fifty gallons of water are considered more effective than usual applications of Paris green, London purple or arsenate of soda.

BANDING THE TRUNKS.

After attaining its full growth in the apple, the larva either falls to the ground with the apple and seeks some hiding place in which to pupate, or if the apple remains on the tree, the larva crawls down the limbs and trunk seeking some possible shelter from the birds. Many of them hide under loose scales of bark or in crevices. The orchardist, taking advantage of this effort to hide, bands the trunk of the tree using either burlap or paper. These bands should be six to eight inches in width and should encircle the trunk midway between the ground and the main limbs. These bands may be fastened with a couple of tacks.

Since the pupa changes to a perfect moth in about eight days the bands must be examined and the larvae and pupae destroyed as often as once in seven days. The bands are then replaced. The first application should be made about the middle of June and continued until early September. Since it is not possible to destroy all of the larvae by spraying for the first brood it seems wise to make an effort to entrap the small percentage that have escaped and thus lessen the number of the second brood.

FUNGUS DISEASES.

As long as our climate was comparatively dry we had little trouble with fungus diseases. At this time in Eastern Nebraska the humidity of the atmosphere has changed and is similar to that of Missouri and Illinois. Many of our orchards are now seriously troubled with apple scab. These fungus diseases affect the foliage, weakens the stems and sometimes almost destroy the apple crop. This is checked by the use of Bordeaux.

The spores of the apple scab winter over and attack the foliage in early spring. After the fruit has formed the scab may fasten itself on the apple. Effectiveness in spraying for fungus diseases depends upon preventing the germination of the spores.

We make the first application in the latter part of March with the intention of destroying fungus spores which have been carried over winter on the trees. The second application may be made just before the blossoms open. This may be combined with an insecticide in case the orchard is troubled with the canker-worm or bud moth.

The third spraying should be made just after the blossoms fall and is combined with the principle spraying against the codling-moth. It is wise to make another application ten days later and still another may be made about two weeks later. Wet seasons and humid climates require a greater number of applications than dry seasons and semi-arid conditions.

Bordeaux mixture is ordinarily composed of four pounds of sulfate of copper and four pounds of caustic lime to fifty gallons of water. The later sprayings with Bordeaux should lesson the amount of sulfate of copper to two and a half pounds to the fifty gallons of water since when applied in full strength it checks development of the apples and gives them a russet appearance.

CONCLUSION.

In combating both the codling-moth and fungus diseases it is necessary to spray at least four times. The first spraying is applied before the lead-buds open and is distinctly a fungicide. The second spraying is applied just before the blossom-buds open, using Bordeaux with the addition of an insecticide to destroy the bud moth and canker-worm.

The third spraying, using Bordeaux and insecticides combined, is doubtless the most important of all and is applied just after the petals have fallen and before the calyx closes. This application should be most thorough.

The fourth spraying, of the same composition as the third, should be a week later and is chiefly to remedy the defects of the previous application. It however, also furnishes an additional supply of poison for the later larvae just hatching. In wet seasons it seems wise to make the fifth application. The copper sulfate, however, should be reduced in quantity, the arsenical poisons remaining the same as before. This is intended to check the second brood.

Great American Desert Seeds

are best for general use, are grown in the very heart of the region once known as the Great American Desert, at an altitude of over two thousand feet above sea level and without irrigation. They are thoroughly tried and drouth tested and have proved producers of profitable crops of both grain and forage. Write for list of specialties and prices.

BARRED AND WHITE PLYMOUTH ROCK eggs, \$2 per 15; \$5 per 45. Hawkins and Bradley strains, scoring 93% to 94%. Mr. and Mrs. Chris Bearman, Ottawa, Kans.

FOR SALE—Choice S. C. B. Leghorn cockerels, \$1 each. J. N. Sheldon, Route 1, McPherson, Kans.

of codling-moth and to assist in checking fungus diseases.

Banding the trunks has proven a useful adjunct when the orchardist can find time to give the additional work.

Results obtained and the satisfaction derived from spraying depend very largely on its thoroughness. By all means spray with system. Do not miss even a small branch. Remember that one moth lays three hundred eggs and that one small area of fungus growth will, under favorable conditions, give off spores enough to infect the entire orchard.

The Poultry Yard

Hints to Poultry Raisers.

One of the most valuable publications about to be issued by the Department of Agriculture is by G. Arthur Bell, Assistant Animal Husbandman, Bureau of Animal Industry, entitled "Hints to Poultry-Raisers." Following are excerpts from the same:

"In selecting a variety of fowls, it is desirable to obtain only pure-breds, as with these one has a flock of fowls which will produce carcasses and eggs of a much more uniform shape, color, and size than mongrels will produce, all of which will aid in finding a ready sale. If one has a flock of mongrel fowls and can not afford to buy pure-breds, he should choose a pure-bred male bird of the breed preferred and mate him with a few of the best mongrel females. This system, if carefully followed a few years, will give a high-grade flock that will be practically as good as pure-breds, so far as market conditions for dressed fowls and eggs are concerned."

"Choice of a variety will depend largely on the purpose for which the fowls are kept—whether eggs alone, both eggs and meat, or meat alone is the chief object; whether white-shelled or brown-shelled eggs are desired; and whether sitters or nonsitters are wanted. These are divided into the following three classes:

"Egg breeds.—Nonsitters and producers of white-shelled eggs—Leghorns and Minorcas.

"General-purpose breeds.—Sitters and producers of brown-shelled eggs—Plymouth Rocks, Wyandottes, Orpingtons, and Rhode Island Reds.

"Meat breeds.—Sitters and producers of brown-shelled eggs—Brahmas, Cochins and Langshans.

"POULTRY-HOUSES.

"In selecting a location for poultry-houses, it is desirable to place them on an elevation having a natural drainage away from the building. A dry, porous soil, such as a sandy or gravelly loam, is preferable to a clay soil. As sunlight and warmth are essential to the best success with poultry, the buildings should face south. A southeastern exposure is preferable to a southwestern one of a direct southern exposure can not be obtained. The size of the house will depend almost entirely on the number of birds to be kept. If the birds are kept in flocks of forty to sixty, about 5 square feet of floor space should be allotted to each hen. The building should be high enough to enable the attendant to avoid bumping his head against the ceiling.

"The best house for fifty to sixty fowls is 20 by 14 feet; front elevation 6½ feet, back elevation 5½ feet, with double pitch roof of unequal span. The roof, if it is shingled, should have not less than one-third pitch. If roofing paper is used, one-quarter pitch will answer. In the front or south wall there should be placed two windows about 1 foot from the top and 3 feet from the ends; 8 by 10 inches is a good-sized pane to use in a twelve-light sash, making the sash about 3 feet 9 inches high, and 2 feet 5 inches wide. A door 2½ by 6 feet may be made in one of the end walls, and also a small door in the front wall, for the fowls to pass in and out of the building.

"The roost platform should be placed in the rear of the house, extending the whole length. The platform should be about 3 feet wide and 3 feet above the floor, and the perches should be placed about 8 or 10 inches above the platform. The nest should be placed against the end of the house opposite the door or under the roost platform, and should be darkened. Several small boxes for shell, grit, beef scraps, etc., should be placed against the walls about 16 or 18 inches above the floor. If cement or wood floors are used, a dust-bath should be provided for the fowls.

"The feeding platform should be placed against the end of the house opposite the door or under the roost platform, and should be darkened. Several small boxes for shell, grit, beef scraps, etc., should be placed against the walls about 16 or 18 inches above the floor. If cement or wood floors are used, a dust-bath should be provided for the fowls.

"The roost platform should be placed in the rear of the house, extending the whole length. The platform should be about 3 feet wide and 3 feet above the floor, and the perches should be placed about 8 or 10 inches above the platform. The nest should be placed against the end of the house opposite the door or under the roost platform, and should be darkened. sary to have healthy, vigorous stock, properly fed. In order to do their best, hens should be fed grain food, animal food, and green food. They should be fed enough to keep them in good condition but not overfat, and they should be induced to take plenty of exercise. No set rules can be given for feeding, as conditions vary, and there are different methods of feeding different breeds.

"A good system to follow for winter feeding," the pamphlet continues, "is, mash once a day and grain scattered in the litter twice a day. The mash may be fed dry or slightly moistened. When fed dry it is usually put into a trough or hopper hung against the wall and the fowls allowed access to it at all times.

"The mash fed at the Maine Experiment Station is as follows, in the proportion indicated:

Two hundred pounds wheat bran; 200 pounds wheat middlings; 100 pounds gluten-meal; 100 pounds cornmeal; 100 pounds linseed-meal; 100 pounds beef scrap.

"Another mash may be mixed as follows, Iowa, in the proportions indicated: 100 pounds corn-meal; 100 pounds ground oats; 100 pounds wheat bran.

THE FEEDING OF YOUNG CHICKENS.

"Young chickens should be fed a little at a time and often. If they are given ground food alone, there is a great danger of over-feeding. Very good results may be obtained by the feeding entirely of cracked grains from the time the chickens are hatched until they reach maturity. There are on the market many prepared chick-feeds, consisting of different mixtures of cracked grains, which are very suitable. After the chickens are five or six weeks old, the prepared chick-feed may be dropped, and the chickens fed on cracked corn, cracked wheat, hulled oats, etc.

"If the chickens can not get grass, some kind of green feed should be provided. Lettuce and cabbage are very good for this purpose. Some kind of meat should be provided, such as green cut bone or meat scraps. Finely cracked grit should be kept in a box where the chickens can help themselves at all times. Water should be provided from the start and should be placed in such a dish that the chickens can not get into it and get wet."

Caponizing.

Please tell me through the KANSAS FARMER how to caponize and what age the chicks ought to be. V. M. Haskell County.

Ans.—It is an intricate operation to caponize a chicken, and to explain it in the KANSAS FARMER would take more space than could be afforded. Manufacturers of caponizing instruments furnish a book descriptive and illustrative of the operation and some can learn from these written directions; but the better way is to take lessons from an expert caponizer. The price of the instruments is \$2.50. Cockerels are caponized at from 3 to 5 months old.

The Veterinarian

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of the Kansas Farmer. Kindly give the age, color, and sex of the animal, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should give the inquirer's postoffice, should be signed with full name and should be addressed to the Veterinary Department of the Kansas Farmer, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter answered in the Kansas Farmer, an immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across top of letter: "To be answered in Kansas Farmer."

Diseased Teeth.—My 4-year-old mare has a small growth on one side of the jaw, that has a small hole in it and a very small quantity of pus runs out. What is the disease and how shall I treat it?

SUBSCRIBER.

Roxbury, Kans.

Answer.—Your horse, from the symptoms you give, evidently is affected with a diseased tooth; take the animal to a competent veterinarian and have the tooth treated.

Scours in Calf.—My calf, 11 days old began to scour this morning and by evening was passing almost clear blood. We are feeding it by hand, and have given it new milk until last night—not from the calf's mother, but from a cow that has been fresh fourteen weeks. It ate heartily yesterday of alfalfa hay. I was surprised at this as it is so young.

A. W. G.

Answer.—You had better feed the

calf nothing but milk, and scald that before allowing the calf to drink it. Give a teaspoonful of listerine every two hours in half a pint of milk until you have given a teacupful of the listerine. I think this will stop the scours, and then be careful for a time that the calf does not overload its stomach.

Colt with Splint—Steer with Cough.—What is good to remove splints from a colt? The colt is 2 years old and has splints on both front legs. It is in good growing condition so I thought if the splints could be removed I would be glad. I have used no remedy. The splints are large and have been on quite a while.

My yearling steer has been running in stalk-field for some time, and when first noticed was getting very thin and had a cough. I took him up and tied him in the barn. He eats very little and slobbers a good deal and is very thin. He eats a little corn and passes water frequently. He has a small lump on one side of the jaw, which seems to be soft. I have used a blister, but it seems to do no good. What ails the steer?

G. L. G.

Maple Hill, Kans.

Answer.—Very little can be done for splints after they have become hard and fastened to the bone, but if taken as soon as formed can be rubbed down flat so that they will not show. The splint is a growth of bone between the main column bone and the splint bone, so it is not practicable to remove it.

Your steer seems to be all out of condition, and I would advise feeding him the following: One and one-half ounce of pulverized nux vomica, 4 ounces of iron sulfate, 6 ounces of pulverized glycyrrhiza root, 5 pounds of oil-meal. Give a heaping teaspoonful three times a day in ground feed.

Itch in Cattle.—Will some one give remedy for seab or itch in cattle?

Marion County. J. C. D.

Answer.—We have sent you under separate cover a bulletin describing the preparation and use of lime and sulfur dip, it being too lengthy to publish in this column.

Nervous Derangement.—I have a red 6-year-old cow that has queer spells. She will fall on her head when standing still; will go round with front feet while hind feet are still; was that way last year after calving for 3 months, then was all right, and became fat enough for beef, but when she calved again she lost 200 pounds in two weeks, and was the same as last year.

Lebanon, Kans. A. E. R.

Answer.—The nervous system has evidently been injured in the region of the cow's loins, probably during the act of calving, and it would probably be best when the cow makes a good recovery for you to let her go for beef, and not try to raise any more calves.

Lump on Calf's Head.—I have a valuable male calf that has raised a knot on top of his head by fighting. It feels hard and grisly, and grows larger. How can I remove it so that it will not injure his selling value? C. P. B.

Farmington, Kans.

Answer.—I would advise blistering with a fly blister the swelling on the top of the calf's head; put the blister on at intervals of about every three weeks.

Lame Mare.—I have a young mare that got a nail in her hind leg at the fetlock joint 2 years ago. She is very lame when first starting out, but gradually gets almost over it. A neighbor says the nail is in there yet. The leg is enlarged about one-half with an extra point at one place. She is a good breeder. Can anything be done for her at this time? D.

Marysville, Kans.

Answer.—There is evidently a bone lameness starting from the nail that you describe entering the fetlock joint. The enlargement of the leg is probably the growth of bone; I would advise your using a fly blister on the affected ankle and if you have a competent veterinarian in your locality would advise having the joint "flred" before applying the blister.

Mare With Scours.—My 4-year-old brown mare has had scours for the past three months. I have had her in stalk field most of the time, but she has been in stable last few weeks. What would you advise? H. B.

Everest, Kans.

Answer.—Your horse, from the symptoms you give, evidently is affected with a diseased tooth; take the animal to a competent veterinarian and have the tooth treated.

Scours in Calf.—My calf, 11 days old began to scour this morning and by evening was passing almost clear blood. We are feeding it by hand, and have given it new milk until last night—not from the calf's mother, but from a cow that has been fresh fourteen weeks. It ate heartily yesterday of alfalfa hay. I was surprised at this as it is so young.

A. W. G.

Answer.—You had better feed the

CONTAINS \$ MAKING INFORMATION FOR YOU

Will be sent free for the asking.

If you want broilers for the early market, when prices are high, read its Hints and Helps. See what it says about raising hens, if you want young pullets to lay next winter, when eggs are dear. There's money in fattened fowls for late summer and fall markets. The poultry business is one industry that is not overdone. We aim to put the you on right track to make money.

Our machines are scientifically correct. They are ahead in the percentage of eggs hatched and in ease of operation. They are made from carefully selected and seasoned lumber. We are not a new concern compelled to buy green lumber and make it into machines the next day. Our incubators will not warp or crack and be useless after the first hatch. They are built for service and use year after year. We put a good honest weight of copper into our boilers and tanks. Our doors fit and close tightly. Our regulator regulates. Our lamps burn clear and brightly. When you get the Victor you get the best—if it's any other you may be buying trouble. Write today.

GEO. ERTEL CO., Quincy, Ill.

Thousands of customers regularly get 90 and 95 per cent hatches from our machines, using no more eggs and oil than their neighbors who with other machines get 50 to 80 per cent. We pay freight and guarantee our machines as represented or money refunded. Established 1867.

ON CREDIT.

The Celebrated Century Incubators. Cash or easy monthly payments. We trust honest people living in all parts of the world. The first hatch pays for the Incubator, gives you large profits besides. Write for free catalogue of Incubators and Brooders.

BOX 56, LINCOLN, NEBRASKA

\$645 NET PROFIT IN 5 MONTHS

Does it pay? That's what the prospective incubator buyer wants to know. We answer "Yes!"—and we prove it by letters like this.

Wichita, Kas., March 23, 1905.

Gentlemen: Beg to state, that with the five 150-Egg Sure Hatch Incubators I purchased, I have made seven hatches, hatching 4,200 chicks, in five months. Out of the \$4,200 expense aggregated \$430, leaving me a net profit of \$645. This is the only way of profiting by the investment for the market, yours truly, E. FULTON WEAVER.

Our 1905 machines are now ready for delivery. For further information, write to us ever been built. We have tested the "Sure Hatch" in every possible way, and we find that the percentage of chicks hatched is higher than ever before. 85 percent hatches and better are the rule. Improved ventilation system. Our new safety lamp is all that its name implies. Can't come apart. A wonderful oil-saver.

Sure Hatch on 60 Days Trial Let us send you our 1906 "Sure Hatch" on two full months' trial, freight prepaid, with the understanding that if not entirely satisfactory and superior to any other incubator on the market we will take it back and refund your money. Each machine guaranteed for five years. Write at once for special money saving proposition and large catalogue of Incubators, Brooders and Chick Feed. Address nearest office.

POULTRY FEEDING AND FATTENING

A handbook for poultry keepers on the standard and improved methods of feeding and marketing all kinds of poultry.

The subject of feeding and fattening poultry is prepared largely from the side of the best practice and experience here and abroad, although the underlying science of feeding is explained as fully as needful. The subject covers all branches, including chickens, rollers, capons, turkeys and waterfowl; how to feed under various conditions and for different purposes. The whole subject of capons and caponizing is treated in detail. A great mass of practical information and experience not readily obtainable elsewhere is given, with full and explicit directions for fattening and preparing for market. The broad scope of the book is shown in the following

Dairy Interests

Kinds of Roughage For Cows.

What is the best feed for milch cows in winter where one has no alfalfa? Do you think millet hay, Kafir-corn hay and cane, with some corn-fodder and oats or barley hay (the hays all cut when the grain was in the dough), would be sufficient, or would it pay better to raise some other kind of feed or buy alfalfa at about \$4 per ton?

What other feeds could be raised that would be better? All of the above-named feeds do well here. Which do you think is the best and which should I raise the most for best results?

McPherson County. EARL MYERLEY.

Without alfalfa for roughage you will be compelled to purchase some concentrate rich in protein in order to have satisfactory milk-producing ration. The various hays and forage crops which you mention are all distinctly carbonaceous, the oat and barley hay being the richest in protein of any named. The farm-grown grains are likewise distinctly carbonaceous; consequently any combination which you could make would be deficient in protein, and such a ration will not enable a cow to produce milk in paying quantities. These various forage crops may constitute part of the roughage ration, but if you would produce milk economically I would advise you above all things to endeavor to raise alfalfa on your farm.

At \$4 per ton it will pay you to buy alfalfa of good quality. We are paying \$7 to \$8 per ton delivered at the college, and do not feel that we can get along without it even at that price. Well-cured and properly handled alfalfa hay contains almost as much digestible protein as wheat bran, which will cost you from \$15 to \$18 per ton at the present time. For an annual forage plant the cow-pea may be recommended for furnishing a large amount of protein, it being even richer in protein than alfalfa. The correspondence of Professor TenEyck in the KANSAS FARMER will give you information as to the growing and harvesting of cow-peas. For present use I would suggest

tioned I would prefer the oat and barley hay for the milch cows. If you have cows that are capable of producing a fairly good quantity of milk, it will pay you to give a grain-ration composed of corn-chop or Kafir-meal with about one-third bran by weight, unless bran is exceedingly high in price. Also bear in mind that you must observe what the cows are doing in the way of milk-production, and if the grain-ration is not being paid for, reduce it or cut it out altogether, only feeding grain to the cows which respond with an increased flow of milk. I will again urge you to study the alfalfa question and see if you can not secure a stand upon some field of your farm.

G. C. WHEELER.

Dairy Short Course.

FROM THE DAIRY DEPARTMENT, K. S. A. C.

This course opened Jan. 3 and closes March 22. It is given at a time of the year when work on the farm is least pressing, and is especially designed for young men who wish to fit themselves for up-to-date, practical dairying.

The college creamery is equipped with the latest and best dairy machinery and utensils. There are twelve different kinds of the best cream separators, four kinds of cream pasteurizers, five Babcock milk-testers, three different acid testers, and two cream-ripening vats, and each student has a special set of dairy instruments for testing adulterations in milk, acidity, per cent of fat, etc. The students not only learn to operate all of the machinery, but decide for themselves which is best adapted to their needs. Special emphasis is placed on dairy sanitation, and it has been frequently noticed, that where our students have been employed in creameries that were run-down and out-of-date, they were soon renovated and placed in a sanitary condition, and the products therefrom improved one to five cents per pound. Many of these boys, coming in from the farm, have had very little previous education, and consequently would not make rapid progress in books alone. In the creamery, however, they soon become interested, for they learn to act and think at the same time they are figuring the quantity of coloring and salt to use in a given amount of cream, testing a given

BEST OF SEPARATORS
ACTUALLY FREE
OF COST

This is really the fact in the purchase of a DE LAVAL CREAM SEPARATOR. Any reputable person may buy a DE LAVAL machine on such liberal terms that the machine actually pays for itself.

And it not only does this the first few months, in which it saves its cost, but goes on doing it for fully twenty years to come. In the face of these facts buying trashy "cash-in-advance" separators, or any other than the best, is penny wise, dollar foolish. Such machines quickly lose their cost instead of saving it, and then go on losing instead of saving.

There is no possible reason why any buyer of a Cream Separator should be content with less than the DE LAVAL and there never was a more promising time to make this most profitable of all farm investments.

Send at once for new catalogue and full particulars.

Fits, then
Epilepsy.

Dr. Miles' Restorative Nervine has been so successful in curing these brain-wrecking diseases that there is every reason to believe that even the most hopeless cases can be benefited, if not fully restored.

We will be pleased to refer any one thus afflicted to many who now enjoy the blessing of health, after years of hopeless suffering.

"I have a son that had brain fever when two years old, followed by fits of the worst type, and he was pronounced incurable. I spent hundreds of dollars for him, without relief. After about fifteen years he became so bad that we sent him to Longcliff hospital for the Insane, at Logansport, Ind. He was there nearly three years, but he continued to grow worse, so we brought him home July 30, 1902, in an awful condition. He had lost his mind almost entirely. He hardly knew one of the family; could not even find his bed; was a total wreck. He had from 5 to 10 fits a day. We were urged to try Dr. Miles' Nervine, and before the first bottle was used, we could see a change for the better. We have given it to him ever since, and he has had but two very light spells since last August, 1903, and then he was not well other ways. We pronounce him cured, as he can work and go anywhere. If any one wishes to ask any questions concerning this, they are at liberty to do so."

H. H. BUNNELL, Lincoln, Ind.

Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind.

What You Gain

force, which is thousands of times stronger than the force of gravity that makes cream rise in pans. (2). One-half to twice as much butter, because Tubulars remove dirt and bacteria, thus making gilt-edge butter possible. (3). Half the work saved, because you finish skimming five minutes after milking, feed warm skimmed milk at barn, and have only the can of cream to care for. Write today for catalog W-165. It tells all plainly.

ern Illinois and Southern Wisconsin, in the latter State being as common as barns.

The silo as a means of preserving and storing feed has not as yet become a very important feature of Kansas dairying. But with the increase in population and steady rise in the valuation of land, the Kansas dairy farmer must look to methods whereby two cows can be maintained where but one was kept before, if he is to continue to reap a profit from his labor and investment.

Recognizing these facts, the Kansas State Agricultural College purchased, in 1902 and 1903, two 100-ton cypress-stave silos from an eastern firm. They were installed on the east side of the dairy barn, and what was then the farm department began a series of practical tests, performed by students, to determine the best and cheapest silage crops.

The siloing of feed compares favorably with the canning of fruits and vegetables. There are various feeds which can be siloed, but it has been definitely determined that Indian corn is best adapted for this purpose. However, alfalfa and cow-peas, or soy-beans are being siloed at the present time with great success. A mixture of alfalfa and corn, or soy-beans and corn, is preferable to either of these siloed alone, on account of the balanced nutrients which these feeds contain.

ADVANTAGES OF THE SILO.

The advantages of silos are numerous. The silo enables the farmer to preserve a larger quantity of the food material of the original fodder for the feeding the farm animals than is possible by any other system of preservation now known. Pasture-grass is the ideal feed for live-stock, but it is available in but few months in the year. The same is true of all siloing crops. When made into hay, the grasses and all other green crops, lose some of the food material contained in them on account of the loss of leaves and other tender parts, and on account of the fermentation that takes place while the plant is drying out or being cured. In the case of Indian corn the loss from the latter source is considerable, owing to the coarse stalks of the plant and the large number of air-cells in the pith. Under the best conditions, cured fodder-corn would lose at least ten per cent of its food-value when cured in shocks. Such a low percentage of loss can only be obtained when the shocks are cared for on the cutter, and put in the field under ideal weather conditions. In ordinary farm practice the loss in nutritive value will approach twenty-five per cent, and will even exceed this figure unless special precautions are taken in handling the fodder.

Compared with these large losses in food material in field-cured Indian corn, there is a comparatively small loss in the silo caused by fermentation or decomposition of the living plant cells as they are dying off. It has been frequently determined that the average loss of dry matter in the fodder-corn during the silo season does not exceed four per cent.

Summarizing the considerations concerning the relative losses of food material, as given by the various stations in field-curing and siloing of Indian corn, we may say that the latter, under favorable conditions, is far more economical than the former, and therefore a larger quantity of food materials is obtained by filling the silo with fodder-corn, than by any other method of preservation known at the present time. Besides this comes the great problem of succulence. All feeds of a succulent nature are more digestible and more palatable than dry feeds. We all know the difference between a juicy, ripe apple, and dry fruit. In the drying of fruits, as well as in the drying of corn-fodder, water is the main component taken away. This causes a loss of certain flavoring materials, which, though they do not count for much in the chemist's balance, are of the greatest importance in rendering food materials palatable.

The influence of well-preserved silage on the digestive system and general health of the animal is very beneficial. It is a mild laxative, and acts in this way very similarly to green fodder.

FILLING THE SILO.

The filling of silos is the all-important problem at the present time. As has previously been stated, corn is one of the best feeds for making silage. Corn should be left in the field before cutting until it has passed through the doughy stage, that is, until the kernels are well dentled and glazed. Where large silos are to be filled, and in case of extremely dry weather when

corn is drying up rapidly, it would be well to fill the silo a little before it reaches this stage, as a greater part of the corn would otherwise be apt to be too dry. There is, however, less danger in this respect now than formerly, on account of our modern deep silos, and because we have found that water applied directly to the fodder in the silo acts in the same way as water in the fodder, and keeps the fermentation in the silo in check.

The cutting of corn for the silo is usually done on small farms by hand. Many farmers have been using self-raking and corn-binding harvesters for this purpose, while others report good success with a sled or platform cutter. If the corn stands up well and is not of a very large variety, the end sought may be reached in a very satisfactory manner by either of these methods. If, on the other hand, much of the corn is down, hand-cutting is to be preferred. A number of different makes of corn-harvesters and corn-cutters are now on the market, and it is very likely that corn-cutting for fodder will be done away with in the years to come, at least on large farms.

After the corn is cut, a low wagon, with rack, is very essential for hauling the corn, for corn in the green state is extremely heavy and requires much energy to load on high wagons. The corn having been hauled from the field to the silo, has still to be reduced to a fine, homogeneous mass, convenient for feeding and economical as far as utilization for feed is concerned. In order to do this, the whole of the corn, ears and all, may be run through the ensilage-cutter. The corn is unloaded on a table and run through the cutter, after which it is carried through a tube by means of a blast of air, up into the silo window, and is delivered into the middle of the silo. If corn is siloed ears and all, it is necessary to keep a man or boy in the silo while it is being filled, to level the surface and tramp down the sides and corners. If left by itself, the heavier pieces of corn will be thrown each way and the light leaves and tops will come closest to the discharge, and as a result the corn will not settle evenly and the different portions of ensilage will have different feeding values. To assist in the distribution of corn a pyramidal box may be hung in front of the door and below the top of the carrier. This may be three feet square at the base, and taper to a point, at which a rope is attached for hanging to the rafter. The falling materials will strike the box and be divided so as to distribute to all parts of the silo. The proper distribution of cut corn, after it has been elevated and blown into the silo, is a matter that should have proper attention at the filling time. If the cut material is allowed to drop all in one place and then have no further attention, constant falling of the material in one place will tend to make that portion solid, while the outside will not be so. And besides this, the pieces of ears and heavier portions will continually roll to the outside. As a result the silage cannot settle evenly and good results will not follow. After the filling process, the cut material should be leveled off, and the common and most successful practice is to keep the material higher at the sides than in the center, and do all the tramping at, and close to, the sides, where the friction of the wall tends to prevent as rapid settling as takes place in the center. No tramping, or at least as little as possible, should be done except close to the walls. The weight of silage accomplishes more than any amount of tramping, and all that is necessary is to see that the silage is evenly distributed and to assist in settling by some tramping at the sides.

AFTER FILLING.

After the silo is filled the silage is left to settle. In the course of several weeks a layer at the top, approximately a foot deep, will begin to decay and mould and seal the rest from further decomposition. When feeding time comes this top layer is removed to a depth sufficient to reach pure silage. The silage in a silo is always more or less heated on account of the fermentative process, hence the top layer, which is cooled from one feed to another, should be raked off evenly and then fed.

Silage, the same as canned products, should not be exposed to air for too long a time, for decomposition takes place very rapidly.

Economy in the production of food material means an increased profit, hence as the price of feed advances on Kansas farms, the silo will become a necessary adjunct to the Kansas feeder.

NEW BOOK

JUST ISSUED

SUCCESSFUL FRUIT CULTURE

A Practical Guide to the Cultivation and Propagation of Fruits.

By SAMUEL T. MAYNARD,
Formerly Professor of Horticulture at the Massachusetts Agricultural College.

This book is written from the standpoint of the practical fruit grower; it is up to date in every particular, and covers the entire practice of fruit culture. It gives in plain, practical language, descriptions of such varieties as are most in demand in our markets, and the methods practiced by the most successful cultivators of many sections of the country. Separate chapters are devoted to the apple, pear, peach, apricot and nectarine, plum, cherry, quince, mulberry, grape, blackberry, raspberry, cranberry, strawberry, blueberry, buckberry, subtropical fruits, fruit growing under glass, insect pests and fungous diseases. The chapter on the apple is particularly comprehensive and complete, forming a monograph in itself. The chapter on forcing peaches, grapes, strawberries, and other fruits, describes the most successful methods of the present day, and is the most recent practical treatise on this important industry.

NERVE-FORCE

DORMANT CIRCULATION

that rescue is assured only by re-establishing the CIRCULATION of BLOOD by outwardly charging the controlling Battery-Cells with an element imitating the nerve-force prepared for that purpose by Nature from food and air. This imitative-element is our own faithful NERVE-FORCE and it will positively re-establish the most sluggish CIRCULATION to normal; it replaces in the hands of Nature the reins which control the Valves of the Veins, the uncontrolled lassitude of which is alone responsible for the inroads upon Health and Life of the deadly satellites of sluggishly moving Blood. If the Vital Organs are intact this consummation means full restoration even in greatly complicated cases. In fact the disentanglement of fatal Symptoms is only possible by thus unlocking Nature's Life-current from the outside. By the Twenty years of uninterrupted Success we have had in Life-saving, while Tens of Thousands have died under less rational "Systems" of cure, we prove our Method practical and absolutely correct and our NERVE-FORCE the KEY. Our cures include PARALYSIS, ATAXIA, PROSTRATION, NERVE DISEASES, NEUROSTHENIA, INSOMNIA, CONSTIPATION, CATARRH, DEBILITY, NEURASTHENIA, OBESITY, INDIGESTION, RHEUMATISM, GOUT, URICACIDEMIA, BRIGHT'S DISEASE, DIABETES, TUMORS, STRICTURE, APPENDICITIS, ANEMIA, VARIX, VARICOCELE, SPERMATORRHEA, SEXUAL DECLINE, KIDNEY, BLADDER, PROSATIC, LIVER, LUNG, THROAT and STOMACH Troubles, as well as all Troubles peculiar to Women. And yet it is not a "cure-all," its usefulness being limited to Troubles born of DORMANT CIRCULATION, nearly all of which would come under the head of the one above-named Symptom, "CATARRH." It is fatally unreasonable to attack these complications by pouring drugs into the stomach, which but spur or coddle the Vital Organs; it is unreasonable to "cut" the anguished Flesh in "Operations." Do you not consider a Method that for over Twenty years has saved its little World from these worthy of your perusal? Then please send for our free Data to-day. It comes to you in a plain envelope and its possession entitles you to our free work upon your case in Diagnosis. You will be surprised over the fund of useful information our NERVE-FORCE Publication conveys, and the exactness of our work in Diagnosis.

Agriculture

Sub-Soil Plowing.

EDITOR KANSAS FARMER:—Though living in Indiana, I am a subscriber of the elegant KANSAS FARMER and am owner of a farm in Hodgeman County, Kansas. I feel interested in everything pertaining to farming in that semi-arid part of the State.

Please write me what you think would be the benefit to crops in that part, to have the land stirred to the depth of 5 to 20 inches by some means. I do not ask a long letter in reply, but simply your opinion.

Floyd County P. T. GREENE.

The depth to which a soil may be stirred to secure best results depends largely on the after treatment, the nature of the land, the crop to be grown, and the climatic conditions. Methods of tillage that leave the soil in such physical condition as to readily absorb the moisture as it falls, and to preserve it for the use of crops, are of great importance in regions of light rainfall and frequent drought. In the semi-arid district the average yield per acre depends very largely on the supply of soil moisture.

It would be very expensive to stir the ground each year to a depth of fifteen or twenty inches, and especially so if the intention would be to plow it. If the soil is thoroughly loosened, the after treatment would need to be properly done in order to firm or settle it again to prevent too free circulation of the air which stimulates evaporation, and to restore capillarity. If deep plowing is done, the seed-bed should be gradually deepened from year to year; otherwise by turning up the unweathered subsoil, the productiveness of the field will be reduced.

At this station, four plats, consisting of one-half acre each—two being plowed ten inches deep and two plowed only five inches deep—were planted to corn. One plat of each the deep and shallow plowing was irrigated, and one of each was not irrigated. The field had been in cultivation only two years and had been stirred to a depth of about five inches previous to the above plowing. The yields of corn were:

Treatment.	Irrigated Bu. per acre.	Not irrigated. per acre.
Plowed 10 in. deep, packed and harrowed	51.42	30.54
Plowed 5 in. deep, packed and harrowed	61.14	41.70

All plats received precisely the same treatment except for the depth of plowing and irrigation. It will be observed that the ten-inch plowing yielded about 10 bushels less per acre in each case. This shows that the seed-bed had best be gradually deepened from year to year, as the difference in the yield here is undoubtedly due to the fact that on the deeply plowed plats, the corn was planted in five inches of unweathered soil. No doubt, however, on account of the deep plowing being loose to a greater depth than the shallow plowing, the after treatment (sub-surface packing and harrowing) did not leave it in quite as good a physical condition as the shallow plowing.

Deep plowing, with proper after treatment, affords a better reservoir

for moisture and a better seed-bed for crops that root deeply. It is very desirable to develop and maintain a deep soil, though for ordinary farm crops, six to eight inches seems to be the most profitable depth; while for sugar beets and such crops, it pays to plow twelve inches, or even deeper.

The sub-soil plow, intended to be used in the bottom of an ordinary furrow, one plow following the other in doing the work, would be perhaps the most economical method to stir the soil to a depth of 15 or 20 inches, and even this requires considerable horse-power. The sub-soil plow, if properly used, certainly will increase the yield, on account of its tendency to increase the available moisture for crop production. Though whether or not it can be profitably used depends largely on given conditions and especially on the crop to be grown. The following figures show the effect of sub-soiling on the yield of corn, at the Fort Hays station:

Treatment.	Irrigated. Bu. per acre.	Not irrigated. per acre.
Subsoiled 16 inches deep	26.28	24.75
Not subsoiled	26	20.75

These plats received identically the same treatment except for the sub-soiling and the irrigation, and the variety of corn planted was the same for each plat. It will be observed that there is a little difference in yield on the irrigated plats, while the sub-soiling increased the yield about four bushels per acre on the non-irrigated plat. We shall continue these tests with corn, potatoes and sugar beets.

O. H. ELLING.

Corn Breeding in Wilson County.

EDITOR KANSAS FARMER:—Our farmers' institute has taken up the boys' corn-growing contest. I hope with the encouragement given by your paper and the local press, that many thousand boys will engage in it. That means many thousand bushels of improved seed-corn will be planted next spring by parents and neighbors of the boys. I do not know of anything that promises results both so immediate and so far-reaching as the contest. After securing uniform and productive types, increasing the proportion of grain and the protein-content will be in line. I have experimented enough to be satisfied that by selecting the lower ear from stalks producing two ears, one can soon have a two-eared corn as a rule, instead of an exception. Success to the KANSAS FARMER.

Wilson County. H. M. STARNES.

Bromus Inermis.

Will Bromus inermis grass make good hardy pasture for hogs? and how long will it take for it to become rooted so it will make a good pasture for hogs? When is the best time to put it in? Does it grow on all kinds of soil?

Crawford County. OLD SUBSCRIBER.

Bromus inermis will make a good pasture for hogs, as good as any domestic grass which may be grown in that section of the State. It is not advisable to pasture much the first season after sowing. If the grass makes a good start from spring seeding it may be pastured lightly in the fall. I would prefer to sow alfalfa with the grass, sowing only a small quantity of grass-seed, say 5 or 6 pounds per acre with 8 or 10 pounds of alfalfa-seed. Alfalfa is really a much more valuable forage plant than Bromus inermis and is especially valuable as a pasture for hogs. The Bromus inermis sown with the alfalfa will gradually thicken up and form a sod and make a more permanent pasture for hogs, perhaps, than will alfalfa alone. Clover may also be sown with Bromus inermis. It is al-

ways a time-tried, outwardly applied Home Remedy; an Electric-emulsion, imitating Nature's vital product of DIGESTION. It is founded upon the principle that Suffering, Premature Decline, and Premature Death—as suffered by nine-tenths of the World are born of

to you in a plain envelope and its possession entitles you to our free work upon your case in Diagnosis. You will be surprised over the fund of useful information our NERVE-FORCE Publication conveys, and the exactness of our work in Diagnosis.

ways advisable to sow some perennial legume such as clover or alfalfa with the perennial grasses. The legume is valuable for pasture and also acts as a feeder to the grass plants, making a more productive and permanent pasture than may be had from grass alone. Bromus inermis may be sown as early in the spring as a good seed-bed may be prepared, and if alfalfa is sown with the grass I would also seed early in the spring. Early fall seeding is also successful, sowing about the last of August or first of September. Bromus inermis will thrive on any good soil which will grow corn and grain crops.

A. M. TENNEY.

Farm Notes.

N. J. SHEPHERD, ELDON, MO.

Provide necessary tools in advance of need.

The better selected the seed, the bigger the crop.

Rich meadows and pastures make rich plowed lands.

Study your soil and learn its capacity and needs.

Sow grasses for pastures that ripen at different periods.

The value of an orchard depends much on the selection of varieties.

With all crops a careful selection of seed will always pay.

The older the pig grows the more food will it take to make a pound of gain.

Many improvements can be made about the house when it is too cold or too stormy to work on the farm.

In nearly all cases, clover should be included in whatever system of rotation is adopted.

A proper rotation and wise tillage will do much to keep the soil supplied with available fertility.

We may not expect to breed any type of animal free from blemish, of which we do not have a fine type to begin with.

Consult your own likes and fancies in the choice of a breed, but do not let prejudice stand in the way of accepting the evidence of the markets.

All stock-feeding should be done with a view of saving the fertility which is in the food and getting it back upon the land.

Work that is not done on time requires double the labor to prepare afterward, and the results are never so good.

Better methods, better stock and tools have doubled the production of more than one farm and increased the profits.

It is only a good animal that will repay cost of production when prices are low, or give a profit from winter feeding at any time.

If the manure can not be hauled out as fast as needed, try at least to keep it under shelter until it can be hauled out.

The fertility of the land is more easily maintained by dairying than by following any other branch of farming.

Good breeding and good feeding are so closely related that they must go together. One is useless without the other.

In sowing clover or any of the

grasses, either for pasture or meadows, it pays to use plenty of seed so as to secure a good, even stand from the first.

Without stock there can be no complete utilization of the products of the farm. With stock there should be no waste products.

There is more profit in growing little things and in prime products in proportion, than there is in the great staples; but it requires a different sort of talent.

Profitable feeding consists in giving an animal all that it will eat and digest properly. Some large eaters do not digest their food well and are not fed with profit.

One advantage in growing such farm crops as fluctuate least in value is that it enables one to calculate with some degree of certainty on the outcome of the work.

It is not an economical plan to al-

low animals to shift for themselves while making growth, with the idea that they may be fed up afterwards. Keep thrifty during growth and fatten by the time maturity is reached.

Remedies For Rats.

EDITOR KANSAS FARMER:—R. O., of Stafford County, wants a remedy for rats. They are like the plague; what is a sure cure for one may not help the "other fellow," so I send you some ways that have at different times helped me to get rid of them.

Set a water-tight barrel where they are in the habit of going, fill it nearly full of straw or hay and sprinkle on this grain, bran, or any feed that will attract them. Keep them well fed until they get in the habit of going there and jumping in about as pigs go into a trough, then empty the barrel and fill it with water about as nearly full as it was with straw; six or eight inches from the top is full enough. Sprinkle on some chaff, bran, oats, or anything that will float, with some kind of feed on top. If you have plenty of rats, you may fish out forty or fifty in the morning. You can not get all of them in this way, as they will not continue to go in until all are gone; but it will thin them rapidly for a few nights. You may get another catch by moving the barrel to another place and repeating the baiting.

Another way that once took every rat and cat off the place, was to mix plaster of Paris with an equal bulk of flour and put it where the rats could get it. The mixing needs to be very thorough. The moisture in the stomach sets the plaster and it goes no farther. Not knowing that cats would eat it, no care was taken to keep it from them, but they did eat it with fatal results. Dogs or pigs might also eat this with the same consequences; so keep it where it can not be found by stock of any kind.

A. MUNGER.

Riley County.

A Labor-Saving Device.

Notwithstanding the many forms of labor-saving machinery which have been invented for the farmer's use there are still enough arduous duties in connection with farmwork to warrant the farmer in welcoming anything which will still further lighten his labors.

In building fences, digging wells, erecting rural telephone lines and other similar operations, much of the hardest labor required is in digging holes for the posts. The best method for doing this work has been found to be a post auger. This implement does away with a great deal of the labor formerly required and also greatly facilitates the work as the holes can be dug much more rapidly.

The Iwan Post Hole and Well Auger, manufactured by the Iwan Bros., Streator, Ill., is a good example of this very useful article and its manufacturers say that it is the best auger in the world for boring into the earth. The two blades interlock, having notched edges for this purpose, thus holding them very firmly in place and also causing them to hold the dirt.

There is no suction when removing the auger from the hole. Little pressure is needed in operating it except when the ground is very hard and dry. It makes the hole smoothly and quickly and empties easily. It only takes three full turns of the auger to fill it with earth. It is very durable and can be used for boring in all kinds of ground with the exception of solid rock. It readily takes up gravel and small stones.

Any farmer, stockman, poultryman, nurseryman, telephone company, or in fact any one who finds it necessary to dig post-holes will find it greatly to his advantage to have this auger. It may

be obtained of any enterprising hardware or implement dealer or direct from the manufacturers. They are also engaged in making Sickle Edge Hay Knives, Tile Grain Cleaners, Tiling Spades, etc. For catalogue and further particulars address Iwan Bros., Streator, Ill. Kindly mention this paper.

Time to Plant Trees.

The best way to buy trees is to write to the Fairbury Nurseries, Fairbury, Neb., for their catalogue and select and order what you will need from it. Buy direct from the grower. In this way you not only save the agent's commission but there is nobody between you and the grower to make a mistake. If the trees are not what you order or don't grow, you put it right up to the grower to make good—and he'll do it because he wants you to have the best there is. The Fairbury Nurseries have a reputation that you can rely upon, and they like to sell direct; they want no agent between them and you because they want to know just how their stuff suits you and make it right if anything should be wrong. Their prices will please you and save you money. Write for the catalogue to-day and get your order in early.

Poison.

As far as shaving soap is concerned common soap ought to be marked poison. Shaving is a special process and demands a special soap. If your face has been poisoned with cheap soap, if it burns and smarts and itches, stop using the poison and use real shaving soap—Williams' Shaving Soap will cool and smooth your face and make shaving pleasant. The J. B. Williams Co., Glastonbury, Conn., offer in another column of this paper to send you a free trial sample. "For the sake of your face" read their ad.

Free to Farmers.

That farmers are becoming more and more interested in Andrae farm telephones is shown by the rapid decrease in the supply of books telling of these instruments of necessity. The book that the company distributes free describes all telephones, shows wherein a saving may be made by using the Andrae Phone and proves itself invaluable to all who intend installing one. A telephone is as valuable to the farm as a spring and when once installed would never be dispensed with. One of the books can be had by addressing a postal to Julius Andrae & Sons Co., 823 W. Water St., Milwaukee, Wis.

The March issue of The Fruit-Grower, published at St. Joseph, Mo., is an exceedingly handsome number. It consists of 64 pages, with handsome cover design, in two colors, and is the regular gardening annual of this publication. Prize-gardening articles are submitted from various parts of the country, which cover the subject of the management of the home garden in a very effective manner. These articles are well illustrated. Another feature is an illustrated article on the subject of spraying fruit-trees, with suggestions for making and applying the spray mixtures needed in the spring. The illustrations show a number of spraying outfits, with mixing tanks, elevated platforms, etc. The paper is a credit to its publishers, and is full of live, fresh matter of value to every one interested in growing fruit or who desires to make the home garden more of a success.

Syracuse, N. Y., Dec. 30, 1905.

Gentlemen:—Please forward to my address a copy of "A Treatise on the Horse" at your earliest convenience. We have used considerable of your Spavin Cure and consider it one of the best, if not the best liniment on the market. Thanking you in advance for the book, we remain, Very truly yours,

H. C. FOXTON.

JUST ISSUED

Farm Grasses of the United States

By W. J. SPILLMAN

Agrostologist, U. S. Department of Agriculture

An intensely practical discussion of the farm grasses of the United States of America is presented in this volume. It is essentially a résumé of the experience of American farmers with grass, and it is safe to say that no other work has covered the ground so thoroughly. No attempt has been made to give a connected account of all the grasses known in this country, but the aim has been rather to give just the information which a farmer wants about all those grasses that have an actual standing on American farms. The whole subject is considered entirely from the standpoint of the farmer. One of the most valuable features of the book is the maps showing, at a glance, the distribution of every important grass in the United States; and the reasons for the peculiarities in this distribution are fully brought out. The principal chapters treat on the grass crop as a whole and the relation of grass culture to agricultural prosperity, meadows and pastures, the seed and its impurities; the bluegrasses; millets; southern grasses; redtop and orchard grass; bromo grasses; grasses for special conditions; buying machinery and implements; insects and fungi injurious to grasses, etc., etc. The methods followed on some pre-eminently successful farms are described in detail, and their application to grass lands throughout the country is discussed. The discussion of each grass is proportional to its importance on American farms.

This book represents the judgment of a farmer of long experience and wide observations regarding the plan in agriculture of every grass of any importance in American farming. In its preparation it was used as a text book in schools as well as a manual of reference for the actual farmer has constantly been kept in mind. The book is most conveniently arranged and splendidly indexed, so that the reader may find any subject at a glance.

Illustrated, 5x7 inches, 248 pages. Cloth. Price, postpaid, \$1.00.

EARLY SPRING BROILERS.
Hatched Almost Exclusively by Incubator.

Prices for early spring broilers are usually highest during March and April, and it is in the fancy prices obtained for this class of poultry that the greatest poultry profit lies. Owing to the remarkable ease by which poultrymen can regulate the reason of hatching by means of the incubator, it is not to be wondered at that ninety-five out of every one hundred broilers are incubator hatched.

Of course, the better the incubator the better the result and the greater the profit. Leading poultrymen are profuse in their praise of the Wooden Hen, a 200-egg size incubator, made by George H. Stahl, of Quincy, Ill., and which sells for the remarkably low price of \$12.80. The Wooden Hen is perhaps the best known of all incubators, and is easily the leader where results are considered. It is scientifically constructed—every problem of heat and ventilation has been solved, and it is claimed that the Wooden Hen will hatch every fertile egg. Five minutes time daily is all the attention required—easily operated by any one.

Those interested in poultry-raising, either for pleasure or profit, will get a lot of valuable information from the new catalogue issued by the maker of the Wooden Hen—it's free to all. Better write now before you forget it—just address George H. Stahl, Quincy, Ill.

THE MARKETS.

Kansas City Live Stock Market.
Stock Yards, Kansas City, Mo.

Monday, March 5, 1906.

The promising start in the cattle market last week turned out to be misleading. Higher prices Monday and Tuesday brought out liberal supplies of beef steers after Tuesday. Buyers used the argument they always employ at the beginning of Lent, besides having plenty to select from, and prices declined 15@25¢ from the high time, taking off the gain of first two days of the week. The market was erratic, and fluctuations violent. Good cows held the advance of the first of the week, medium cows and heifers did not make any net gain for the week, veal calves lost 25@50¢, but stockers and feeders were scarce and in good demand, closing the week 10@25¢ higher.

The cattle supply is only 6,000 today, lightest Monday this year, by a third, and prices 10@15¢ higher, or a little better than last Monday on all classes. Top steers sold last week at \$5.75, bulk to-day at \$4.75@5.15, as there are no good steers here to-day, best heifers \$4@4.75, cows \$3@4.25, bulls \$3@3.75, veal calves \$5@6.75. Veals are 75¢@\$1 lower than the high time. Feeders bring up to \$4.80, stockers \$4.60, bulk of feeds above \$4, stockers \$3.50@4.25, a certain percentage at \$3@3.50. Supply from the far West and the Panhandle country was smallest last week of the winter.

Bad country roads are said to have held down hog receipts last week, and to be responsible for the small supply of 5,000 head to-day. The market is most changeable, buyers operating slowly, and sellers in the dark most of the time. The week showed us a net loss of 5¢, but to-day's market is 10@15¢ higher, top \$6.35, bulk of sales \$6.22½@4.60. Supply last week 51,000, a decrease of 11,000 from previous week. Sheep and lamb receipts last week 34,000, a decrease of 8,000 from previous week, and prices on sheep gained 5@10¢. Lambs held steady. Cheap eggs and the beginning of Lent were arguments used to prevent any material advance. Supply to-day is 10,000, but contains a large percentage of ewes and wethers, which the packers most want. Market is 10@15¢ higher on both sheep and lambs. Lambs sold at \$6.35@6.80 to-day, yearlings bring up to \$6, for light weights, wethers \$5.60@5.90, ewes \$4.75@5.40. J. A. RICKART.

South St. Joseph Live Stock Market.

South St. Joseph, Mo., Mar. 5, 1906.

There was a little stronger feeling in the market on dressed beef and export steers to-day, and the receipts at the five points were about 10,000 less than the number in sight for the corresponding days last week. About all that were offered here were a few lots of decent medium grades that sold at \$4.90@5.15, and a few loads of light and medium under-fed and half-fat steers that sold at \$4.35@4.60, while occasionally sales were no more than steady with the close of last week. The general tone of the market was stronger, and spots showed an advance of 5@10¢. The supply of cows and heifers was also very light and prices generally were strong to 10¢ higher than the close of last week. Bulls and veals were steady. Good to choice stock and feeding steers were in fair demand and steady, while fair qualities were dull and weak.

Following are current quotations: Native steers \$4@5.90; Texas and Westerns \$3.65@4.50; cows and heifers \$1.65@4.60; bulls and stags \$1.90@4.65; veals \$3@6.75; yearlings and calves \$2.50@3.75; stockers and feeders \$3@4.50.

The supply of hogs at the five points to-day was 35,000 less than a week ago, and prices went sky-rocketing and reached the highest point in three years. Prices to-day ranged from \$6.10@6.35, bulk selling at \$6.25@6.30. The severe storms of last week and the bad condition of country roads was responsible for the small number of hogs in sight to-day, and it is quite evident that receipts will run light the remainder of the week. In this event values will probably work higher. But the country should not get excited and should not follow the advances too closely.

Receipts of sheep were pretty large but conditions were favorable to the selling interests and the market ruled active and 10@15¢ higher, and advance being particularly on lambs, best selling up to \$6.85. WARRICK.

KANSAS FARMER.

Established in 1863.

Published every Thursday by the
KANSAS FARMER CO.,
Topeka, Kansas

SUBSCRIPTION PRICE: \$1.00 A YEAR

Entered at the Topeka, Kansas, postoffice as second-class matter.

JOHN BOLLIN, Route 5, Leavenworth, Kans.

200 HEAD POLAND - CHINAS

Klever's Perfection 32855, sire of my show herd 1904. For Sale—My best sows are by him. He is near akin to Thick Set, and Keep On, royalty bred and a great sire; also have spring boars and gilts sired by or bred to a son of Mischief Maker or of Corrector for sale.

W. R. PEACOCK, 1-2 Mile Sedgwick, Kansas

POLAND-CHINA Bred Sows

Have a few choice sows bred, mainly Harmonizer gilts bred to Hot Shot. Write at once to

M. S. BABCOCK, Nortonville, Kans.

CHESTER WHITES.

O. I. C. SWINE

Choice young stock of both sexes for sale at very low prices.

S. W. ARTZ, Larned, Kans.

World's Fair CHESTER-WHITE HOGS

Shortorn cattle, Oxford sheep and Peafowls, won 13 prizes on 14 head of Chester-Whites at World's Fair, 1904. Four herd boars in lots.

W. W. WALTMIRE, Peoullar, Mo.

O. I. C. Hogs
Scotch Collie Dogs
B. P. Rocks

One hundred grand pups sired by the two greatest stud dogs in the west, Cragsmere Wonder and Brandane Noble. We are selling more Collies than any firm in America. Why? Because we have the blood, our prices are moderate, and our dogs are workers as well as blue blooded.

With each Collie sold by us we send a book "The Useful Collie and How to Make Him So." Write at once for they are going fast.

Walnut Grove Farm,

H. D. Nutting, Prop., Emporia, Ks.

PRIZE WINNING O. I. C. SWINE

Sows and gilts bred to Kerr Dick, sire to World's Fair Junior Champion, or by Kerr Dick and bred to other equally good sires. Also fine crop of spring pigs from such sows as Big Mary, grand champion at St. Louis, Kerr Ulma, Silver Mine and others. Head-quarters for Boars and Gilts. Write me.

O. L. KERR, Independence, Mo.

The other a black stallion of same breeding as Cricket.

Look up these horses and you will find their breeding of the best. Write me for full description.

Wyatt Stanley
ANTHONY, KANSAS

**You Will Prosper
in the Great
Southwest**

In Oklahoma, Indian Territory and Texas are vast areas of unimproved land—land not now yielding the crops of which it is capable. The same conditions apply to the towns. Few lines of business are adequately represented. There are openings of all sorts—for mills and factories, for small stores, for banks, newspapers and lumber yards. You have only to get on the ground to prove this. To enable you to do so the Missouri, Kansas & Texas Ry offers

**Rates Cheaper Than Ever
February 20th and
March 6th and 20th**

On above dates most lines will sell both one-way and round-trip tickets at exceptionally low rates. If your nearest railroad agent can not give you the rates, write me for particulars.

If you're in any way interested in the Southwest, I'd like to send you my paper "The Coming Country." Address

FRANK IAMS

lions than any man in the United States. He has his "man with cash or bankable note gets away from Iams. Iams' daily "horse show" and his "town of horse barns" filled to the roof with wide-as-a-wagon "black boys."

120—STALLIONS—120

2 to 6 years old, weight 1700 to 2600 pounds, 90 per cent blacks, 50 per cent ton stallions." All registered, approved and stamped by European Government. Dad, it's "100 to 1" that Iams is pushing his competitors off the roof and hypnotizing his buyers with "top notchers" at 50 cents on the dollar, "let live prices." Iams' "horse show" at Iowa and Nebraska State Fair was the "talk of the town." The "best ever." All winners and sons of winners. His 2, 3 and 4 year old Percherons, Belgians and coach stallions won every 1st, 2d, sweepstakes and grand sweepstakes prize at Nebraska State Fair. At Iowa State Fair they were winners of 90 per cent of same prizes in above classes, and the Iowa and Nebraska people said Iams is a "hot advertiser," but "he has the goods" better than he advertises. Teddy, it's "16 to 1" that Iams' "Peaches and Cream" stallions are "hot stuff" (for competitors). "It's a cinch" that Iams saves his customers thousands of dollars in commissions and middlemen's profits. Iams places \$1000 insurance for \$60.

\$1000—SAVED AT IAMS—\$1000

Ikey! What a rich graft these "slick stallion salesmen" are working on the honest farmer selling 4th rate stallion at \$2000 to \$5000. Iams sells "top notchers," so good, big and cheap that they do not need to be peddled to be sold. Mr. Buyer, see Iams' stallions yourself. Take no "gold brick" stallion salesmen's word. Iams has "the goods" you read about. His establishment is worth going 2000 miles to see. Iams makes his competitors "holler." He is knocking "high prices" out of the X'mas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. Georgie, dear! Buy a stallion of Iams. His \$1200 stallions are much better than our neighbors paid those Ohio men \$4000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from breeders, pays no buyers, salesmen or interpreters, has no two to ten men to divide profits with. Iams guarantees to sell a better stallion at \$1000 to \$1500 than are sold to Stock Companies for \$2500 to \$5000 by slick salesmen, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalogue on earth. References: St. Paul State Bank, Citizen's National Bank, St. Paul, Nebraska.

ELDORADO STOCK FARM

DO IT NOW.

The Lincoln Importing Horse Com'y

Lincoln, Nebraska

Now we are here with our catalog. It is ready for distribution. Parties contemplating buying stallions write for catalog. Remember, every stallion represented in the catalog is of our own importation and all of them this year's importation, except the group of three. We also have a large number of stallions not exhibited in our catalog. Note what we say in regard to this group. The three weigh 5,890 pounds; the largest stallions in the West in the same flesh. Some of our 2-year-olds of our last importation will tip the scales at 1,850 to 1,900 in only moderate flesh. Come and examine them at our expense if you find that we have misrepresented to you. Remember, our scales are in front of our office. You do your own weighing.

A. L. SULLIVAN, Manager.

CALIFORNIA

The Land of Promise and Fulfilment

THIS IS A BEAUTIFUL DATE PALM DRIVE LOCATED FIVE MILES FROM THE FRESNO IRRIGATED FARMS. ONLY PLANTED THIRTEEN YEARS AGO.

WHY NOT LIVE IN A COUNTRY WHERE YOU COULD HAVE A BEAUTIFUL AVENUE LEADING TO YOUR HOME LIKE THIS ONE PICTURED HERE? THIS PHOTOGRAPH TAKEN IN NOVEMBER.

The A B C of Farming in California

Question: What is irrigation? Answer: Irrigation is raising crops by flow of water, taken from wells or streams and run over the land by gravity.

Question: Is it hard to irrigate? Answer: No, it is not hard to irrigate. It can be learned in a day. It is a pleasure to see the water running over the land and it is not costly.

Question: What does irrigation pay when compared to raising crops by rainfall? Answer: Crops raised by irrigation pay from three to ten times more per acre in a year than by rainfall. This is the reason irrigated land raises in price so much faster than land that depends upon rainfall.

Question: Why do crops pay so much better by irrigation than by rainfall? Answer: Because there is no drouth to make the crop wither; because there is no loss of crop from too much wet weather; because in a dry atmosphere like that of Fresno County, there are no blight or rust, rot or mildew to injure the crop; because moisture on the root and dry air in the stalk with constant sunshine are the agents that make the crops of the largest yield the best quality.

Question: What other advantages are there in irrigation? Answer: By irrigation you are able to regulate the moisture to just the exact amount that suits the best perfection in your crop. That can not be done by rainfall. Sometimes it may be too wet or too dry. Then again, there is no loss of time from the harvest and no fear of having a crop injured by storms or rain at harvest.

Question: Does irrigated land bring a higher price per acre than land dependent upon rainfall? Answer: Yes, irrigated lands become from five to ten times higher in price than land dependent upon rainfall.

Question: Why? Answer: Because each acre is certain of a good crop each year.

Question: Can you make a living on twenty acres of Fresno Irrigated Farms Co.'s land in California? Answer: Yes. You can make a better living on twenty acres and lay up more money than you could on eighty acres in the East. People are doing it here now. That's another advantage of farming by irrigation. It makes close neighbors, produces good schools and where neighbors are near together and making money they wish to buy additional lands adjoining and that makes the prices raise.

Question: What kind of crops can you raise on the Fresno Irrigated Farms Co.'s lands? Answer: A wonderful variety. Wheat and oats in winter. Almost all kinds of fruits, oranges, lemons, figs, peaches, table grapes, wine grapes, pomelos, almonds, apricots, corn, potatoes, vegetables of all kinds and that king of fodder plants, alfalfa.

Question: What is alfalfa? Answer: Alfalfa is the most valuable forage plant we have. It is a kind of clover. It grows all the year around. You can get five cuttings a year and have from one to two tons per acre each cutting with pasture lands besides.

These questions and answers to be continued in our next advertisement of next week. If you want more information about California, write to us at once for our booklet Fresno Irrigated Farms Co., containing sixty-four pages filled with pictures, mailed free.

KANSAS FARMER

Volume XLIV. Number 11

TOPEKA, KANSAS, MARCH 15, 1906

Established 1863. \$1 a Year

RAILROAD CATTLE-GUARDS AND FENCES.

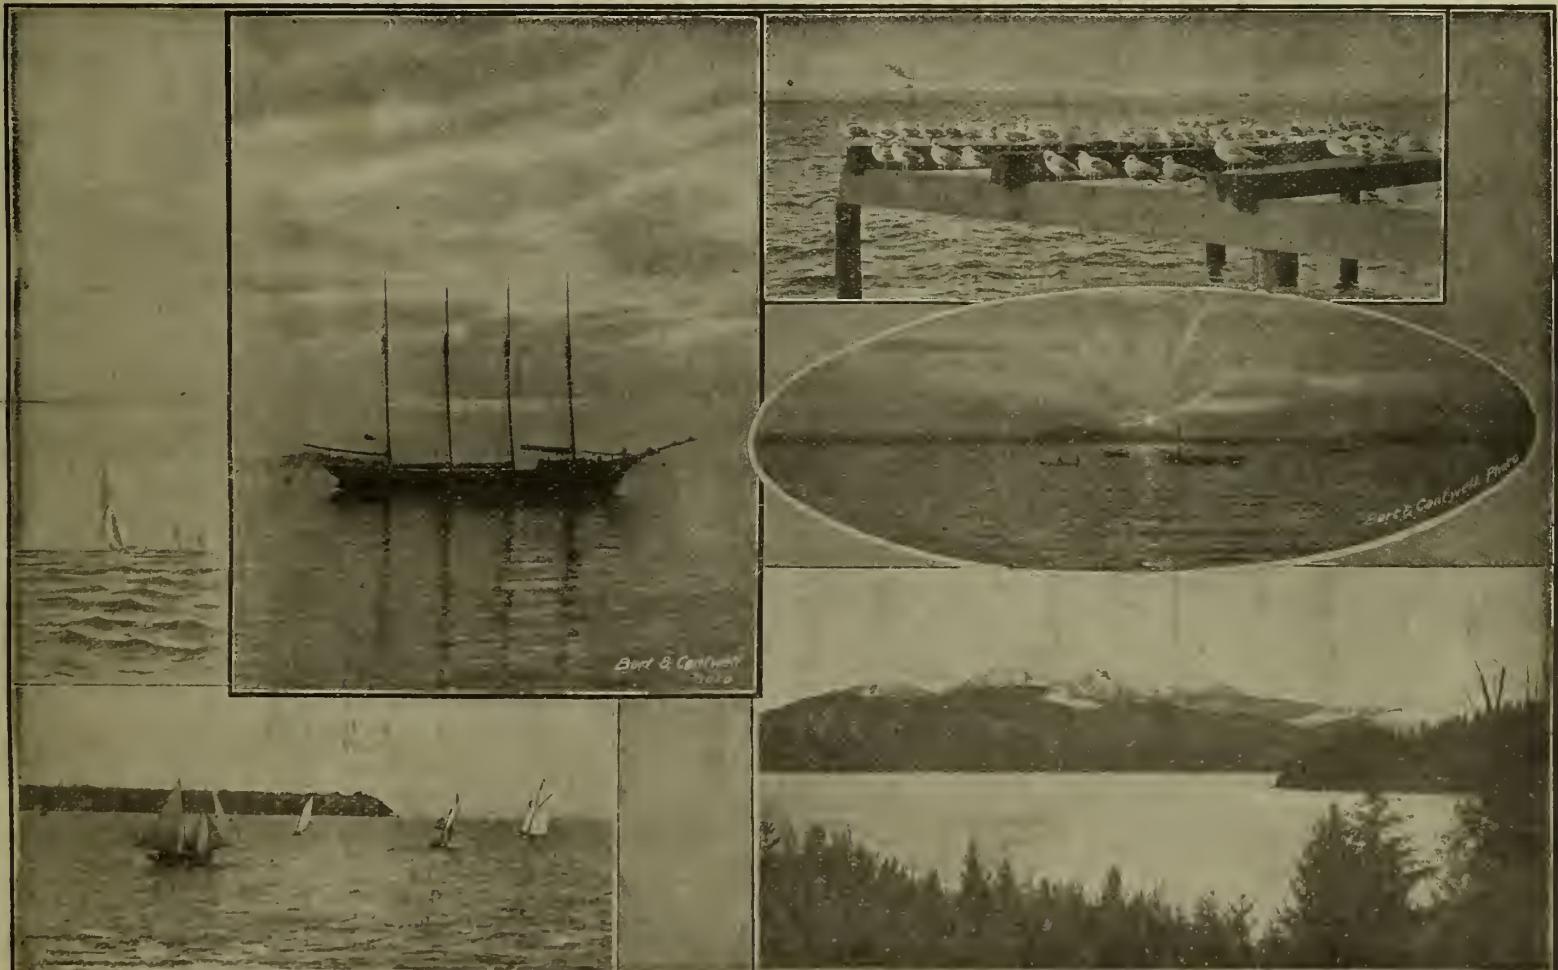

EDITOR KANSAS FARMER:—I would like to have some information in regard to fencing the railroad. The Missouri Pacific railroad runs through my farm and I requested the superintendent to put in cattle-guards at the cross-

for all damages arising from neglect or refusal to comply with section 18.

Section 28 of Chapter 70 reads as follows: "Any person owning land by or through which any railroad has been or may be constructed, who has or may inclose the same or any part thereof, and adjacent to the line of such rail-

forward it to the proper higher official of the Missouri Pacific railroad; that he make a memorandum of the fact and date of giving the copy to the station agent, and then go home and await results. There is scarcely a doubt but that this matter will receive prompt and proper attention. If, how-

by agreement of the owners; the second is by assignment by the official fence-viewers of the township. These fence-viewers are the township trustee, clerk, and treasurer. Section 14 of this Chapter provides that 'Any such assignment or agreement, duly recorded as provided in this article,

ings. He would not answer me, but wrote or talked to the section boss and would give me no satisfaction. The section boss told me to put a wire across the right of way on either side of the track to keep people from driving through. I did this, but a new boss has taken everything off the right of way and left it clear for stock or people to go through. We want to make hog-pasture of one side; can we make them put up a hog fence along that part? How should I proceed to have the road fenced? Can I make them put in cattle-guards at the crossings without fencing the road through?

I have been reading the KANSAS FARMER for a long time, and think your information will be more reliable than I can get elsewhere. F. DILTS.
Harvey County.

Section 18 of Chapter 70, General Statutes of Kansas reads as follows: "When any railroad runs through any improved or fenced land, said railroad company shall make proper cattle-guards on such railroad when they enter and when they leave such improved or fenced land." The next section makes the railroad company liable

road, with either a lawful or a hog-tight fence, may demand of such railroad company that it inclose its line next thereto with a lawful fence, or a hog-tight fence, and maintain the same; provided, that the hog fence defined in section 3064, laws of 1889, shall be and constitute a hog fence for the purposes of this act."

Other sections provide methods of procedure in case the railroad company fails to comply with the law. This procedure is such that the services of an attorney will be needed in enforcing the law; but Section 30 provides that where the railroad is in the wrong it shall pay a reasonable attorney's fee which becomes a part of the judgment.

But it will not probably be necessary for this correspondent to go to law to secure his rights in this matter. The editor suggests that he write a full statement of his desires and make two copies of the writing; that he cut out this inquiry and answer from the KANSAS FARMER and attach it to one copy of his statement; that, in company with a neighbor, he hand the statement and the clipping from the KANSAS FARMER to the station agent and ask him to

ever, nothing is heard from the railroad officials within a reasonable time, write to the KANSAS FARMER the facts in the case, inclosing the other copy of the statement handed to the station agent. The editor will look into the matter and try to get the case before the higher officials of the railroad and has no doubt but that the proper action will be taken including needed attention to such employees as may not have pursued the right course.

Avoid going to law, if possible.

REMOVAL OF PARTITION FENCE.

EDITOR KANSAS FARMER: A. and B. own adjoining farms. B. sells a portion next to A.'s portion of line fence. Can A. remove his former portion of line fence, compelling C. to build one-half of fence between him and A., or how should the division be made?

Cherokee County. O. A. RHOADS.

The law—General Statutes of Kansas, Chapter 153 provides two methods for determining what portion of a division fence each of the adjacent owners shall build and keep in repair. The first and best of these methods is

shall be binding upon the parties and all succeeding occupants of the lands.

In 36 Kan., case of Robertson vs. Bell, the Kansas Supreme Court, in an opinion by Justice Valentino, concurred in by the entire bench, recognized an agreement for division of fence as good without questioning whether it had been recorded.

This is equitable and fair. The last clause making the assignments "binding upon the parties and upon all succeeding occupants of the lands." Gives permanency to the divisions as made. This provision seems to make it a matter of indifference to A. what disposition B. makes of his land. The letter of this section directs A. to continue to maintain his agreed or assigned portion of the fence, while B. and his successors are left to make such arrangement as suits them for the maintenance of B.'s portion.

But in the case stated by our correspondent, desire for a new agreement comes not from the side of the fence on which a division of ownership has occurred, but from A. who might be expected to wish the old agreement to continue. If the old agreement has

been abandoned, then a new assignment will have to be made. The best way to do this is for A. and B. to agree upon the division of the fence separating their lands, and for A. and C. to agree upon the division of the fence separating their lands. If they can not so agree, the matter may be taken to the fence-viewers as provided in Sections 10, 11 and 12 of said Chapter 153.

The law nowhere confers upon either party the right to remove a partition fence so long as it is used as a partition fence by the other party. If a change be made in the division of the fence on account of partial change of ownership or other cause thus requiring different assignments, an old fence may be removed by mutual consent, but if mutual consent be not given for removal, the better way is to ascertain the value of the portion of the fence which changes ownership, such ascertainment to be followed by sale and transfer in the usual way. The fence law provides for such ascertainment of value if the parties can not agree.

The law in this case is a good guide to equity and may be followed by agreement between the parties without expense if neighbors will all try to do what is right.

A CONCESSION FROM GERMANY.

The threatened elevation of yet higher tariff barriers against the importation of American food-products into Germany has been postponed for a year. This will give time in which the American Reciprocal Tariff League may be able to secure such reasonable modifications of the American tariff as will make it possible to secure a continuance of trade relations between this country and Germany. The American farmer needs the German market. The German consumer needs American food-stuffs. It has been assumed that even if great barriers be maintained against the admission of products of German industry into this country, the necessities of the case would compel the admission of American breadstuffs and meats into German markets without an increase of import duties. There has even been manifested in some quarters a disposition to neglect the interests of American farmers, and to arrogantly say that no concessions will be made even though we lose the German markets for farm products.

The German seemed willing to make it possible to arrange mutual concessions. He enacted a dual-tariff schedule, the lower rate to be applicable to products from countries which make similar concessions, the higher rate to apply to all others. The American Reciprocal Tariff League was organized for the purpose of advocating similar reasonable enactments by the American Congress. The action of Germany in postponing the date at which in the absence of concessions from this country the higher rate should prevail, is a manifestation of a disposition to be reasonable and if possible to avoid a tariff war.

It will be remembered that in reply to inquiries from the editor of the KANSAS FARMER, Senator Long and every Kansas Congressman took positions favorable to keeping the German and other foreign markets open. This matter, affecting as it does the prosperity of the farmer, should be kept freshly in mind. It will do no harm to cause suitable resolutions to be introduced in the Congressional conventions soon to assemble. The farmer constituent is never more important in the eyes of the candidate than at nomination and election times.

ALFALFA ON LEASED LAND.

EDITOR KANSAS FARMER:—A rented a farm from B for cash rent, which has a few acres of alfalfa on it. Can A fence alfalfa hog-tight and pasture with hogs without asking B? Please publish in your valuable paper next week.

Ottawa County. G. M. SCHMIDT.

This case is not covered by statute. The equities, however, may be determined and should guide the parties at interest and would very likely guide the court in case the parties were so unfortunate as to go to law over the matter.

While it is not so stated, the inference from the statement made is that the acre of land had been seeded to alfalfa before A rented it. Unlike other meadow or pasture crops, alfalfa, if a good stand, is in the nature of a permanent improvement. To destroy or even to impair the stand of alfalfa would be unjust to the owner of the land. It is well known that hogs, especially if allowed to pasture alfalfa closely, are likely to impair and even destroy the stand. This would be unjust to B. An old stand of alfalfa may be pastured with hogs to a reasonable extent and at proper times without se-

rious danger of greatly injuring the stand. There is, therefore, possible an agreement between the parties that may be greatly to the advantage of the tenant without damage to the landlord. The landlord's consent should, however, be obtained for the use of the alfalfa for any purpose that might injure the stand unless there has been a definite agreement waiving the landlord's interest.

STUDENTS' STOCK-JUDGING CONTEST.

Recognizing the importance of interesting young men in the study and improvement of the various breeds of domestic animals, the Agricultural Association, in connection with the Animal Husbandry Department of the Agricultural College held their third annual stock-judging contest on March 5. The contest was open to all agricultural students, and great interest was taken.

Gold medals, valued from \$5 to \$20 were given as prizes to the ten men having the highest averages. The merchants and business men of Manhattan donated very liberally to the fund for the purchase of the medals.

Each contestant was required to pass judgment and write reasons on two classes of horses, cattle, sheep, and swine. The highest possible score was 600 points and the results of the contest are as follows: W. J. Brown was first with a score of 563; J. S. Montgomery, second, 488; A. J. Milham, third, 479; T. T. Baker, fourth, 473; C. F. Blake, fifth, 472; M. D. Snodgrass, sixth, 470; Harry Oman, seventh, 466; H. W. Hull, eighth, 465; Clarence Lambert, ninth, 457; W. T. McCall, tenth, 448.

TO PROMOTE THE DEVELOPMENT OF THE SOUTHWEST.

A convention of the Southwest is to be held at Saint Louis on April 16 and 17, for the purpose of securing concerted action for the further development of the great section of the country that will be represented. It is stated that the assurance of such general cooperation is received from the country interested, that there is certain to be a successful inauguration of a movement which will tend to bring into use the vast as yet undeveloped resources of a quarter of the most potent area of the United States.

The purpose is a worthy one. There seems little need for overcrowding in any industry or in any section, while there remains, only half developed, a resourceful section the use of whose potentialities needs only intelligence, skill, labor and capital to produce abundant sustenance for millions of people.

A few years ago it was not known what wealth of coal, lead, zinc, and salt in this region had waited for the hand of the developer. Yet more recently has it become known, that oil and gas in prodigious quantities, the extent of which has not yet been learned, needed only the application of the drill. What is yet under the surface of the Southwest to repay exploration can not be guessed.

The finding of these rewards for enterprise has in no wise abated, but has added to the prosperity of agriculture in the Southwest, and promises to bring to the very doors of the farmer, the market which he has sought in the distant East and beyond seas.

There ought to be an immense gathering at Saint Louis April 16 and 17, and it ought to mark an epoch in the progress of the country represented.

THE SANTA FE GOOD ROADS TRAIN.

Notice the advertisement of the Santa Fe Good Roads train in this issue. While this advertisement announces the final meeting of the series only, it is to be understood that the same conditions apply at all other points where the train stops. No expense will be spared to make a success of this series of lectures. D. Ward King, of "Split-log drag" fame, and other well-known experts will be on the train to give free lectures and demonstrations in practical road-building at each town. Stops of one day will be made at each of the following named cities: Olathe, March 26; Wellsville, March 27; Ottawa, March 28; Iola, March 29; Girard, March 30; Erie, March 31; Coffeyville, April 2; Independence, April 3; Chanute, April 4; Lawrence, April 5; Emporia, April 6; and Topeka, April 7.

There is a proposition to induce the Topeka Street Railway Co. to extend its Washburn college line a mile or two to the west so as to serve the densely peopled suburb called Seabrook. That such extension is desirable for the people of Seabrook and vicinity there is no doubt. The many dairymen of that

quarter will welcome the possibility of a daily milk car. The advent of the railroad will lead to further division of the land into small holdings, to closer cultivation, to increased population, and to greatly enhanced values of real estate. Many residents of the city like to get out into the country and do a little farming or gardening. This is especially true of clerks and laborers. The near future should make the extension a paying line for the railway company. To the layman there is no apparent reason why city railways may not extend to serve suburban communities and to do the interurban service which has proven so profitable further east.

"Concrete Construction About the Home and on the Farm," is the title of a book of 127 pages published by The Atlas Portland Cement Co., 30 Broad St., New York, whose advertisement appears in the KANSAS FARMER. This little book gives in understandable form the information which has been sought by very many inquirers among the readers of this paper. It gives specifications for mixing and handling Portland cement and for applying it to the many purposes for which it is rapidly coming into use. Write to the above-named company for a copy of the book, stating what you wish to construct of concrete.

Reports from Canadian and Kingfisher Counties, Oklahoma, state that wheat is being seriously damaged by cut-worms. The entomologist of the experiment station has visited fields where the worms are at work, and recommends spraying a strip of the wheat just ahead of the worms with Paris green at the rate of one pound to 100 gallons of water. The spraying should be done while the worms are feeding on the wheat and, of course, no stock should be allowed to pasture on the sprayed wheat.

EDITOR KANSAS FARMER:—In your issue of March 8, 1906, is a communication from G. B. Taylor, of Dickinson County, on cane hay. I have raised it for ten years and have fed it to my mares and all kinds of horses summer and winter, and I have raised colts every year. I never had any trouble. I believe that cane is as healthy as any hay that I ever fed. I have never known a horse to cough or have heaves as a result of eating it. I have been a reader of the KANSAS FARMER for four or five years. I could not do without it. I think it is the best farm paper I have ever read. L. W. Potter, Kans.

BLOCKS OF TWO.

The regular subscription price of the KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year and one new subscription for one year with one dollar to pay for both. In like manner two new subscribers will be entered, both for one year, for one dollar. Address: The Kansas Farmer Company, Topeka, Kans.

Imported Percheron Mares for Sale.

Watson, Woods Bros. & Kelly Company, the well-known draft-horse importers of Lincoln, Nebraska, have a new announcement in this issue, calling attention to an extra good lot of imported mares they now offer to sell. It will be remembered that this firm made an importation of mares for the great sale held in December, but on account of an unavoidable delay the mares did not arrive in time for the sale. This is the only importation of mares that we know of, and it affords our readers a rare opportunity to buy imported mares, as very few import anything but stallions. As will be noted, the offering includes a pair of ton 5-year-old mares in foal to one of the most famous stallions in France. Also a pair of matched black 3-year-old mares weighing 2,500 pounds, one of them with a black filly at foot and the other due to foal within six weeks. Also a 2-year-old black mare weighing 1,700 pounds and with extra good bone and finish. Others include a pair of gray yearling mares weighing 3,000 pounds that are described as the making of a show team. The mares are described as absolutely sound and with the best breeding to be found in the old country. Their prices range from \$500 to \$1,000, including colts at foot. The opportunity to secure imported draft mares is very limited, and those interested in buying should not delay, as the demand for all kinds of good draft mares is very strong. See advertisers and kindly mention KANSAS FARMER when writing.

Agriculture

Burley—Hog Pasture.

I have been watching the results of experiments as stated in your paper, and find them of great help; but there are some things I do not see in it, and would like to suggest a change in the small-grain crop for Kansas farmers, also to get a little advice concerning the same. It seems to me that we could use other small grains beside millet, oats and spelt, and that we could realize fully as large a profit as from any of these by sowing barley. I would like to know if barley is adapted to this section of Kansas, and the best method of sowing and harvesting it. It is said to make one of the best feeds for all kinds of stock raised on the farm. I would like to hear from some one who has had experience with this crop and the best variety for this country, and to know where seed can be obtained.

I wish to prepare a permanent pasture for hogs by sowing some kind of grass with clover, and have been advised to sow in June in growing corn just before the last plowing and that by next spring it will be ready for hogs to be turned into. Do you recommend this, or would it be better to spring sow with a nurse-crop? For summer pasture I usually sow equal parts of rape, oats, and cane-seed. Can you suggest an improvement on that? One more: is the Mammoth White Dent corn adapted to this section of Kansas?

OTIS, WARRENSBURG.

Nemaha County.

Barley succeeds very well at this station. As an average for three crops of common Six-rowed barley, the best producing barley tested at this station, a yield of 35.8 bushels per acre has been given; this is 1,518 pounds of grain per acre. In the same period the Sixty-day oats, the best-producing variety of oats out of some thirty tested, has given an average yield of 46.8 bushels per acre, or 1,498 pounds of grain per acre each year. While several other varieties of barley have yielded nearly as much as the Six-rowed, the Texas Red oats which are really the standard variety in Kansas, have yielded only 39 bushels per acre as an average at this station; this is only 1,248 pounds of grain per acre. On the whole, therefore, barley has proved to be the superior crop. At this station I consider barley harder than oats. The claim is that when chinch-bugs are prevalent, barley is the crop most attacked, and this may be an objection to the crop in some years; but barley is certainly a better drouth-resister than oats and will stand more hot weather; and in trials at this station has produced, on the average, not only larger yields but a better quality of grain than oats. At this station the best-producing varieties in the three-year test are: Common Six-rowed, 35.8 bushels; Bonanza, 34.4 bushels; Mansury, 24.1 bushels; Mandscheuri, 32.2 bushels; and Success Beardless, 35.5 bushels per acre respectively. We have seed for sale of the Bonanza, common Six-rowed, and Mandscheuri varieties at prices given in circular which I mail you under separate cover. You can secure seed barley from Western seedsmen.

Barley is sown and handled very much as oats. We usually sow about 2 bushels per acre as early in the spring as we sow any grain. Barley makes good feed for stock, ground and fed with other feeds; or it makes a very fair fattening food when fed alone to hogs and cattle. When the grain is not ground it should be soaked when fed to stock.

Alfalfa makes excellent pasture for hogs. If you desire a grass-pasture I have been recommending a combination of English blue-grass, Bromus inermis and red clover; sow about 12 pounds of each of the grasses with 3 or 4 pounds of the clover per acre. I prefer to sow early in the spring without a nurse-crop. Grass sown in this way on fairly clean land, will make a good start and furnish considerable late summer and fall pasture. If sown with grain as a nurse-crop, about three times out of five you will fail to secure a stand, and you get no use of the grass the first season.

Early-fall seeding of the grasses named is also practicable. Sow about the first of September without a nurse-crop on a well-prepared seed-bed. Clover, however, should be seeded in the spring and not in the fall. Bromus inermis seeded in the spring at the station yielded 1½ tons of hay the next season and furnished considerable fall

pasture. It is not advisable, however, to pasture spring seeding until late in the summer, or in the fall and then only lightly. It is true also of fall seeding that it should not be pastured too early the next season, but if possible should produce a hay crop before the field is turned to pasture. I do not favor the method of sowing in corn at the last cultivation. In a wet season it may answer very well, but there are too many chances of losing the seed, and at least of getting a poor stand of grass or clover.

Your combination of rape, oats and cane for a summer pasture is a good one; you might include field-peas in the combination named. At this station cow-peas alone make good late-summer and fall pasture, also a combination of cow-peas and corn, or cow-peas and cane. The cow-peas are a little later crop than the rape, oats, and cane combination. We have found that sowed sorghum, or sowed Kafir-corn, or sowed corn makes good late-summer and fall pasture.

Mammoth White Dent corn is a late-maturing variety and may not be so well adapted for growing in your part of the State as some earlier maturing sorts, such as Boone County White, Silver Mine, Farmer's Interest, or McAuley's White Dent. The Hammett White Dent is also well adapted for growing in Northern Kansas. This is a native Kansas corn and has been grown in Marshall County for fifteen or twenty years. A. M. TENNEY.

Starting Alfalfa.

O. H. ELLING, SUPERINTENDENT FORT HAYS EXPERIMENT STATION.

As alfalfa is costly to seed, it pays the farmer little to experiment along this line, but he should rather benefit by the experience of others. Of course it is impossible to lay down a set of iron-clad rules on account of the great variation in soil and climatic conditions, although there are some general principles that apply to a wide range of conditions. Many failures to get a stand of alfalfa are due to not giving it a fair trial. Alfalfa is a difficult plant to cultivate; its needs must be carefully studied, and it should be given every possible care and attention.

The first important step in the selection of the field is to secure a convenient location, one that is adapted for growing this crop. As alfalfa, well started, will be a profitable crop for ten to twenty years without reseeding, it is quite an item to have the field so situated as to best improve the many advantages it affords to the farmer. If possible, locate it near the farm buildings, as alfalfa is a very profitable pasture for all kinds of farm poultry, as well as hogs and horses; and if bees are kept, they not only make honey from it, but are a necessity in the production of seed. It is also good for the eye to look upon. The field must be well fenced to keep off wandering cattle or sheep, as to these it is dangerous for pasture, frequently causing instant death by bloat.

The chief essential to be considered in the choice of field is the nature and lay of the land. Alfalfa will grow anywhere in the State so far as altitude is concerned. If possible, select a smooth, level tract which is well drained and not swampy. While alfalfa needs water and needs it in large quantities, it will not grow on wet, soggy ground, or with the water-table too near the surface. Rich river and creek bottoms, if not subject to prolonged overflows and well drained, afford ideal conditions for growing this crop, though smooth upland if rich, produces a very profitable yield of a choice quality of hay, being less stemmy than that grown on the bottom-lands. Do not save your most fertile land for what you believe to be the "money" crop; for if you get alfalfa started on the right kind of land, no other crop will bring better income; while, on the other hand, few other crops will cause one to lose money faster than will alfalfa when repeatedly seeded on thin, shaly land.

The well-test auger might often be used to advantage in examining the lower soil before sowing alfalfa-seed. If we find that the ground is underlaid with a layer of rock, a stratum of dry sand, or a tough, hard layer of shale close to the surface, we may rest assured that alfalfa will not reach its highest perfection. On the other hand, if we find a deep, alluvial, sandy loam of calcareous origin, with the underflow anywhere from 10 to 50 feet below the surface, the conditions are ideal and alfalfa will be one of the most profitable crops a farmer can put on such land.

Alfalfa will grow on a variety of soils, though usually it yields better on

light than on heavy soils; but in many localities it grows on the heavy, gumbo flats. Lime is an essential element in the soil; consequently alfalfa is better adapted to localities with "hard" water than those with "soft" water. It thrives well on very sandy soil provided the water-table is near the surface and within easy reach of the plant. While alfalfa roots deeply, it is not absolutely necessary for the soil to be of great depth, providing of course that it is sufficiently moist and contains plenty of plant-food.

SEED-BED.

While the mature alfalfa is a vigorous, deep, gross feeder, renovating and enriching the soil, the young plant, on the other hand, is tiny, delicate, and frail, and must have ideal conditions for the first year of its life. The soil must be in a perfect physical condition, containing plant-food in an easily available form and moisture sufficient so the young life of the plant will not depend entirely upon the rainfall.

It is absolutely useless—a waste of money and human effort—to sow alfalfa on a poorly prepared seed-bed. A good stand is frequently secured on newly broken land if the seed-bed has been well prepared; while on the other hand, many failures to get a stand on old ground are due entirely to the shiftless preparation of the land. As alfalfa is costly to seed, it is desirable to get the land into the best physical condition possible, even if it takes two or three years to do it. Summer fallow, clean culture is important, or the ground should be free from weeds by growing on it some cultivated crop which requires frequent cultivation, as it promotes the germination of the weed-seeds so they may be destroyed and the land made clean for alfalfa.

The seed-bed should be gradually deepened until the desired depth is reached, which is about 6 to 8 inches, thus forming a good reservoir for moisture which is an important factor in the West. The subsoil should be mellow, yet compact and covered with a two-inch mulch of fine soil. The seed-bed should always be considered as the home of life. Air is an absolute necessity for all living things, though the amount of ventilation or aeration necessary for the best results depends largely on the nature of the soil, the crops grown and the climate. Some soils are tight, firm and run together, needing proper cultivation, and the addition of humus to bring about the desired conditions. Other soils are too open and porous, thus allowing a too-free circulation of air and causing excessive loss of moisture by evaporation. This latter condition is more prevalent in the semi-arid regions. Summer fallow is often desirable in regions of light rainfall, not only to kill the weeds but to conserve moisture for one entire season, so that the young alfalfa plant will have sufficient moisture to develop its root-system, after which it is able to withstand many hardships. Where the annual rainfall averages from 15 to 25 inches the water must be handled very economically and the soil must be in such a mechanical condition as to take it up when it comes, and such methods of cultivation must be applied to the soil to best preserve the moisture for the use of the crops.

Before seeding, be sure to have a good supply of moisture in the soil; otherwise, the seed is worth more in the sack. We find the early spring the best time to sow. I should rather risk the frosts of early spring than the weeds and dashing rains later. In some parts of the State, fall-seeding is desirable because of the absence of crab-grass and other troublesome weeds. In this section and in the West, early fall seeding has proven successful, and has this advantage: that the weeds need not be mowed, as is necessary with spring sowing, thus saving labor and time, and the next year a fair crop of hay is secured. Fall seeding had best be done early—about August

and the seed-bed should be in ideal condition, containing sufficient moisture so that the young plants be rapidly developed and able to withstand the winter freezes. Even then, alfalfa is often winter killed by severe weather.

The kind of seed is a very important consideration because our success or failure will depend largely upon the seed; and since we have already put much work on the land and since alfalfa-seed is expensive, we should select judiciously. It should be tested for purity and germinability. Alfalfa is difficult to clean thoroughly and it often contains obnoxious weed such as crab-grass and foxtail. In handling alfalfa intended for seed it is often allowed to heat, either in the stack or

sack and the result is that only a low per cent will germinate. Such seed is usually of a brownish yellow or dark color, while good alfalfa-seed is of a greenish yellow, or brown color. Since alfalfa has a peculiar habit of adapting itself quickly to change of environment, it is no doubt best to obtain seed from plants grown under the same climatic conditions as those of your own locality. A nurse-crop is usually undesirable as it robs the young alfalfa of its plant-food and moisture.

By mixing alfalfa-seed with cornmeal of about the same fineness as the seed, in the proportion of two parts seed to three parts cornmeal, seeding may be done with a common grain-drill, setting the drill to seed two pecks of wheat per acre. We use the Superior disk-drill with press-wheels. It is best not to put the seed in too deep, but just to the moisture, then cover shallow, about one inch. The press wheels help to firm the soil about the seeds and stimulate germination.

The amount of seed required per acre is dependent upon the condition of the soil, the manner of seeding, and the quality of the seed. It is my opinion, however, that much alfalfa-seed is being wasted annually in the State of Kansas by putting it on too thick. Ten pounds per acre of good alfalfa-seed is ample.

We have three strains of alfalfa well-started on the highest upland at the branch station and it gives promise of a profitable crop. While it does not yield so many pounds to the acre as the hay on the bottom-lands, yet it is of a choice quality with a large percentage of leaves and is, therefore, richer in protein than more rank alfalfa.

On account of alfalfa's being a rather coarse plant and difficult to keep when put in stack, we bale it directly from the field and store it in the barn. After it is wilted in the swath we use a side-delivery rake to put it in the windrow, and if the weather is threatening rain we put it in shocks to cure; otherwise we leave it in the windrow until it is well cured, then with a sweep-rake draw it to the baler. The man who ties puts the bales from the press on a low, flat wagon, and at noon and evening they are hauled in and put in the barn. This method proves to be almost as economical as stacking, and is more satisfactory. At Manhattan the silo is used, and when the alfalfa is ready to cut and the weather is unfavorable for haying, the alfalfa is put directly into the silo and is a very valuable feed as silage.

In rotation with our common crops, alfalfa is very worthy of consideration. Unfortunately, the subject of crop rotation is very much neglected in this section of the country, but it is an important topic if the fertility of our soil is to be retained. It is an enricher of the soil because it belongs to the famous family of leguminous crops which have the power under certain conditions, of gathering free atmospheric nitrogen and storing it in the soil, or building it into their tissues for the nourishment of growing animals.

Alfalfa increases the nitrogen in the soil. It improves the soil tilth by shading the ground, and by adding humus through the decaying of its large, deep-growing roots, and at the same time it frees the land from weeds. If you have no alfalfa on your farm, study the plant, its needs, your soil, and try hard to make it one of your farm crops. Alfalfa is good for the farmer's soil, it is good for the farmer's stock, and it is good for the farmer's pocketbook.

Directions for Destroying Pocket Gophers.

DAVID E. LANTZ, ASSISTANT, U. S. BIOLOGICAL SURVEY.

Pocket-gophers infest all the States and Territories west of the Mississippi, and parts of Illinois, Wisconsin, Florida, Georgia, and Alabama. They occur also in Southwestern Canada and over the greater part of Mexico. All the species live underground in ramifying tunnels, and all bring to the surface quantities of earth, which is heaped up in the shape of mounds. The habits of these animals are everywhere much the same.

Throughout their range, pocket-gophers are very destructive to crops. They eat the roots of fruit-trees and in this way sometimes ruin whole orchards. They eat both roots and tops of clover, alfalfa, grasses, grains, and vegetables, and are especially harmful to potatoes and other tuberous crops. In addition to all this, they throw up innumerable mounds of earth in meadows, pastures, and grain-fields, which cover and destroy far more of the crop than is eaten by the animals or killed by having the roots cut off. These

mounds also prevent close mowing, so that much of the hay-crop is lost, and the pebbles they contain often break or injure farm machinery. The loss due to gopher mounds in the clover- and alfalfa-fields in some of the Western States has been conservatively estimated at one-tenth of the entire crop. In many of the fertile valleys where they abound the animals are by far the most formidable of the farmer's mammalian enemies.

Pocket-gophers may be destroyed by

GOPHER RUNAWAY.—a, mounds of loose soil; b, laterals leading to mounds, usually closed with earth; c, main runaway, usually clean.

poison, by traps, and by the use of carbon bisulfid.

POISONING POCKET-GOPHERS.

Poisoning with strichnine is the most effective means known for killing pocket-gophers, and, as it involves the least expenditure of money and labor, the Biological Survey recommends it for general use. As a rodent poison to be used by farmers, strichnine has several advantages. Its action is sure, its deadly character known to most persons, and its bitter taste is an additional safeguard against mistaking it for a harmless drug. Strychnia sulfate is the most convenient form of the poison, since it is freely soluble in hot water and in the natural juices of vegetables used as bait. To disguise its bitterness so that rodents may not be deterred from eating the baits, sugar is often employed, or the strichnine may be mixed with its own bulk of commercial saccharine. A sugar syrup poisoned with strichnine may be used with excellent results. It is prepared as follows:

Dissolve an ounce of strichnia sulfate in a pint of boiling water. Add a pint of thick sugar syrup, and stir thoroughly. The syrup is usually scented by adding a few drops of oil of anise, but this is not essential. If preserved in a closed vessel, the syrup will keep indefinitely.

The above quantity is sufficient to poison a half-bushel of shelled corn or other grain (corn recommended). The grain is steeped in hot water and allowed to soak over night. It is then drained and soaked for several hours in the poisoned syrup. Before using, cornmeal may be added to take up the excess of moisture.

Dry crystals of strichnine also may be used. They are introduced, by means of a knife, into small pieces of potato, carrot, or sweet potato, or into entire raisins or dried prunes. A single large crystal (or several small ones) is enough for each bait. Raisins are especially recommended because they are easily handled and contain enough sugar to disguise the bitterness of the poison.

The prepared baits are introduced into the underground runways of the gophers and are conveniently handled with a spoon. A stout dibble is used to make holes into the runways. This consists of a spade handle shod with a metal point and having a strong bar for the foot of the operator about 15 inches from the point.

Having located the runway by use of the dibble, it is moved from side to side to make the soil firm about the hole, and then withdrawn. A piece of poisoned potato or raisin or a teaspoonful of the poisoned corn is dropped into the hole, which is left open. Some farmers prefer to cover the holes, but the experience of the writer is against the practice.

By this method but little labor is necessary, and the operator soon acquires skill in finding the runways. The bait should be placed in the main runways and not in the short laterals near the mounds (fig. 2). If placed in the laterals, the animals are likely to cover it with soil or throw it out without finding it. A skillful operator can go over 20 to 40 acres of badly infested land in a day, and, if the work is carefully done at a time when

the pocket-gophers are active, all the animals should be destroyed by the first application of poison.

TRAPPING POCKET-GOPHERS.

Trapping is a successful method when followed intelligently and persistently. It is especially adapted to small fields, orchards, and gardens, where only a few gophers are present; but in the case of large areas that are badly infested, the method involves too much labor.

For trapping gophers an ordinary No. 0 steel trap may be employed, but there are a number of special gopher-traps on the market that are better adapted for general use.

In using the ordinary steel trap, the first step is to make an opening into the main gopher tunnel. The trap should then be sunken so that the jaws are level with the bottom of the runway and lightly covered with green clover or alfalfa or grass, or even loose soil, care being taken that these do not clog under the pan, or trigger. No bait is required. The hole should be just large enough to receive the trap and should be covered so as almost to exclude the light.

Besides the ordinary steel trap, various gopher-traps have found favor with farmers. Several traps are on the market whose main advantage lies in the ease and simplicity of operation and in the fact that they kill the animals instantly. All of them have been found to be excellent, but the simpler ones have advantages over those with closed sides. These special traps should be set in the laterals leading into the main tunnel of the gopher, or at the entrance of open burrows where fresh earth is being thrown out. The trapper should choose the freshest of a series of mounds and dig along the lateral until it is found clear of soil.

CARBON BISULFID.

Carbon bisulfid has been employed for killing pocket-gophers, and under favorable conditions its use is recommended. If the burrows are extensive or the soil dry, the gases are dissipated so rapidly that a large quantity of the liquid is required to kill the animals and the method becomes too expensive. If, however, the burrows are simple and the soil moist, bisulfid may be used successfully. For pocket-gophers an ounce of the liquid for each burrow is sufficient. The carbon bisulfid is poured over a bunch of cotton, rags, or other waste material and this quickly pushed into the burrow, which should be closed at once.

COOPERATION.

Any farmer may readily rid his premises of gophers by the use of poison or traps. Unless, however, the entire community unites in active and intelligent cooperation in the destruction of the animals, the cleared area will be sooner or later invaded from neighboring premises, and the work of destruction must be repeated. Cooperation only will effect a radical cure. When cooperative efforts for the extermination of gophers over a considerable area are attempted, careful attention must be given to waste lands along fences, streams, public highways, and railroads. Such places are favorite haunts of the animals, because in them are found loose, sandy soil, moisture, and succulent roots for food. It is from such resorts that adjoining farms are often restocked with pocket-gophers.

Essential Features of a Good System of Crop Rotation.

D. H. GRIPSON.

Since no two farmers own farms with exactly the same kind of soil, or have the same circumstances under which to labor, or have the same desires or ideals which they wish to reach, it would be impossible to outline a definite system of crop rotation that would apply to each and every farm. In presenting this subject, therefore, I shall not endeavor to lay down any hard-and-fast rule for crop rotation, but will give some general principles which each individual farmer should apply to his own conditions.

The reasons that crop rotation is

usually a good practice may be divided into two classes:

1. Those which concern the immediate profit of the farmer. Under this head we may consider the following principles: (a) Crops should rotate so as to make the best use of the moisture in the soil. (b) Crops should rotate so as to distribute the labor through the different seasons of the year. (c) Crops should rotate so as to keep down weeds and eliminate diseases and insects. (d) Strong feeding crops should follow the weaker feeding ones.

2. Those which relate to maintaining or increasing the fertility of the soil. Under this head we may consider the following principles. (a) Crops should rotate so as to use preceding crops' residue. (b) Rotations should contain legumes in order that the nitrogen of the air may be transferred into the soil. (c) The rotation should not contain a large proportion of exhaustive crops. (d) Deep- and shallow-rooted crops should alternate.

In explanation of the principles of the first group we offer the following discussion:

Crops should rotate so as to make the best use of the moisture in the soil. Perhaps as good an illustration of the non-observance of this principle as any under common observation, may be seen when a farmer grows wheat on ground from which he has just harvested a luxuriant growth of Kafir-corn or cane. The poor crop of wheat following these crops is generally attributed to the exhaustive effect of the latter upon the soil, and this may be true to a certain extent, as these crops mature late in the season and produce so abundantly that they probably draw heavily upon the available amount of plant-food, but the greater defect generally lies in the fact that the Kafir-corn or cane made a rapid growth late in the season, and being rather deep-rooted crops drew most of the moisture from the soil. It would be far better to put the fall crops on ground that had been plowed immediately after harvesting some earlier crop, or if put in stalks it should be put in the field that matured earliest. If there are abundant fall rains, this precaution may not be necessary, but it is generally a safer plan to farm so as to save as much water as possible whether it may be needed or not.

To realize the importance of distributing farm work, it is only necessary to visit a locality where wheat alone is grown. There we see at harvest time a great rush. Men are in demand at high wages, horses are worked beyond reason and everything gives way to the harvest of the great crop. The rush abates somewhat when the wheat is in the stack, but there is extremely hard work until the thrashing, plowing and seeding are done in the fall, when comparatively all labor ceases until the next harvest. The man who keeps some stock and raises a variety of grain and forage crops, does not have such a rush of work at any time, but has his work distributed so as to permit him to do a good share of it himself or to keep a regular force of men throughout the whole year.

The necessity of keeping down weeds is evident to any intelligent farmer. If any crop is conducive to the propagation of certain weeds, it is best to follow it by a crop that will permit of the most effectual operations against the weeds, or will so shade the ground or make such a vigorous growth as to choke or crowd out these pests. In general, small grains should be followed by cultivated ones for the above reasons.

If smut, rust, or other diseases are bad in small grain, rotation should provide for a crop to follow them which is not affected with these diseases. If wheat is infected with the Hessian flies, a year or two of cultivation will eradicate them; but, of course, if other parties near-by continue to raise wheat this will do little good.

Farm crops may be divided, according to their ability to take plant-food from the soil, into strong feeders and weak feeders. After a legume or grass crop has been plowed under, we find that the soil contains more humus and more plant-food than it did before the grass or legume was sown on the ground. Rotating the crops in accordance with the principles as named in the outline, we sow our weakest feeding-crop after the grass or alfalfa, but this is not always best, as some weak-feeding crops are over-stimulated under such conditions. For instance, if our rotation consists of alfalfa, oats, or corn and wheat, we should sow them in the order named, according to the above principle. But if we were to sow oats after alfalfa, they would undoubtedly make such a rank growth

that they would lodge and rust badly. Corn would not be thus effected, hence we would grow the corn after the alfalfa, making the rotation alfalfa, corn, oats and wheat. The above rule, however, would hold good in most other cases. For instance, cane and Kafir-corn should be placed at the end of the rotation, that is, when it is intended to be sown to alfalfa or grass again.

Crops should rotate so as to use the preceding crop's residue. The grass and legume crops produce more humus than they use. In the tillage of the cultivated crops more humus is oxidized than these plants produce, hence it is important that these plants should alternate, as all soils should have a liberal supply of humus since it aids in holding moisture, furnishes plant-food, and gives a good physical texture to the soil. The legumes, through organisms that live on their roots, gather nitrogen from the air and deposit it in the growing plant, and the decomposition of these plants adds available nitrogen to the soil. By alternating these legumes with the grain-crops, the latter are furnished with nitrogen which is so essential to their maturity.

Deep- and shallow-rooted plants should alternate. This principle is very important for two reasons. It gives the subsoil a better texture and makes it more easily permeated by water and by the roots of plants. The deep-rooted plant brings the plant-food from the subsoil to the surface and deposits it where it is available for shallow-rooted plants. Grain and cultivated crops tend to make the soil open in texture. Grasses and legumes tend to bind the soil particles together. All soils should undergo periodic compacting and loosening processes. Sandy soils are most improved by those methods which compact and bind the soil particles together, while heavy clay soils are most benefited by the opposite treatment. Those crops which add humus will improve the texture of almost any soil.

On account of the varying conditions, there are no hard-and-fast rules for farming; but if the above discussion is applied with common sense it will probably be found not far wrong. The question has been settled that we must have a rotation of crops, but the problem is, what that rotations shall be.

Seeding Questions.

We wish to sow several acres to clover, redtop and English blue-grass this spring, and later to try alfalfa, although we are told that alfalfa and brome-grass are failures in this country.

Please send such bulletins as we need, including one on cow-peas. Our soil is somewhat sandy. The permanent pasture and parts of the bluestem meadow are more or less studded with outcropping sandstone. Would an application of lime pay? If so, please publish instructions. If soil is taken from an alfalfa-field where leaf-blight has been, is there danger of transmitting the leaf-blight where the soil is applied?

D. NEWBY.
Cherokee County.

I would leave out redtop from the combination of grasses and clover which you name, except perhaps on the lowest, wettest land. Redtop is not likely to succeed well on the sandy land which you describe. This grass is adapted to wet land and is really a grass of poor quality as compared with others, and should not be sown where better grasses will grow. On well-watered land in your section of the State, timothy might be used in place of redtop, but on the sandy land described perhaps the timothy will not succeed so well as English blue-grass. The Bromus inermis should succeed well on the sandy land, and I would recommend sowing the Bromus inermis with English blue-grass and clover. Supposing the Bromus inermis should not succeed so well as the English blue-grass, you might sow less of it, sowing 5 to 6 pounds of the Bromus inermis with 20 pounds of English blue-grass and 4 or 5 pounds of clover per acre. I would continue to try alfalfa on well-drained land, but not on wet, sub-irrigated land. A light application of lime on the land in question, previous to seeding alfalfa, might give some beneficial effects.

There would be danger of transmitting the leaf-blight fungus by using soil for inoculating the new land in which leaf-blight has prevailed. I think it advisable, however, to try inoculating the seed or the soil with the bacteria which grows on the roots of the alfalfa plants. It may not be advisable to try inoculation on a large scale at first, but try an acre or so by

WHO SHE WAS

SKETCH OF THE LIFE OF LYDIA E. PINKHAM

And a True Story of How the Vegetable Compound Had Its Birth and How the "Panic of '73" Caused It to be Offered for Public Sale in Drug Stores.

This remarkable woman, whose maiden name was Estes, was born in Lynn, Mass., February 9th, 1819, coming from a good old Quaker family. For some years she taught school, and became known as a woman of an alert

restore the family fortune. They argued that the medicine which was so good for their woman friends and neighbors was equally good for the women of the whole world.

The Pinkhams had no money, and little credit. Their first laboratory was the kitchen, where roots and herbs were steeped on the stove, gradually filling a gross of bottles. Then came the question of selling it, for always before they had given it away freely. They hired a job printer to run off some pamphlets setting forth the merits of the medicine, now called Lydia E. Pinkham's Vegetable Compound, and these were distributed by the Pinkham sons in Boston, New York, and Brooklyn.

The wonderful curative properties of the medicine were, to a great extent, self-advertising, for whoever used it recommended it to others, and the demand gradually increased.

In 1877, by combined efforts the family had saved enough money to commence newspaper advertising and from that time the growth and success of the enterprise were assured, until today Lydia E. Pinkham and her Vegetable Compound have become household words everywhere, and many tons of roots and herbs are used annually in its manufacture.

Lydia E. Pinkham herself did not live to see the great success of this work. She passed to her reward years ago, but not till she had provided means for continuing her work as effectively as she could have done it herself.

During her long and eventful experience she was ever methodical in her work and she was always careful to preserve a record of every case that came to her attention. The case of every sick woman who applied to her for advice—and there were thousands—received careful study, and the details, including symptoms, treatment and results were recorded for future reference, and to-day these records, together with hundreds of thousands made since, are available to sick women the world over, and represent a vast collaboration of information regarding the treatment of woman's ills, which for authenticity and accuracy can hardly be equaled in any library in the world.

With Lydia E. Pinkham worked her daughter-in-law, the present Mrs. Pinkham. She was carefully instructed in all her hard-won knowledge, and for years she assisted her in her vast correspondence.

To her hands naturally fell the direction of the work when its originator passed away. For nearly twenty-five years she has continued it, and nothing in the work shows when the first Lydia E. Pinkham dropped her pen, and the present Mrs. Pinkham, now the mother of a large family, took it up. With women assistants, some as capable as herself, the present Mrs. Pinkham continues this great work, and probably from the office of no other person have so many women been advised how to regain health. Sick women, this advice is "Yours for Health" freely given if you only write to ask for it.

Such is the history of Lydia E. Pinkham's Vegetable Compound; made from simple roots and herbs; the one great medicine for women's ailments, and the fitting monument to the noble an whose name it bears.

carefully spreading 300 or 400 pounds of the infected soil on an acre and mixing it with the soil of the field by cultivation previous to seeding the alfalfa, or you may use the nitroculture preparation and inoculate the seed before seeding.

I have mailed you copies of press bulletins Nos. 125 and 129, giving information regarding the preparation of

seed bed and the seeding of different grasses. I have also mailed you copy of bulletin No. 114, treating on alfalfa. We have no bulletin on cow-pea, but I have mailed you a copy of a letter answering questions on the planting and culture of this crop, and have sent you a circular letter giving instructions regarding the use of lime as fertilizer.

A. M. TENNEY.

Stock Interests

PURE-BRED STOCK SALES.

Dates claimed only for sales which are advertised or to be advertised in this paper.

March 20-22, 1906—Combination sales of Shorthorns, Herefords, Aberdeen-Angus and Herefords at Kansas City; R. A. Ford, Manager, Lawson, Mo.

March 23, 1906—Shorthorns by Shawnee Breeders Association at Topeka State Fair Grounds, I. D. Graham, Secretary, Topeka, Kans.

April 13, 1906—Janes Stock Farm, Willard, Kans., trotting brood horses.

April 13, 1906—Shorthorns by the Southeastern Breeders Association at Fredonia, Kans. H. E. Bachelder, Manager.

April 25, 1906—Shorthorns at Manhattan, Kans. F. M. Gifford, Wakefield, Kans.

May 1, 1906—Geo. Allen, Omaha, Neb., Shorthorns.

A Feeding Ration for Beef.

I am feeding 27 calves and 5 cows and want to get the best gain possible. I have been feeding them about forty days and have them on full feed, but they do not seem to gain as fast as they should. I am feeding between 9 and 10 bushels (by weight) per day of corn-and-cob-meal with alfalfa for roughage. The last week I fed 2 quarts per day of Wilbur's Stock Food, mixed with the meal. Do you think it best to feed all the alfalfa they will eat? When I keep plenty of alfalfa before them they do not eat so much meal. Do you think it would be better to feed oil-meal in place of the stock food? This is my first attempt at cattle-feeding, and any suggestions you make will be gladly received.

Trego County. ERA C. HITT.
I could hardly suggest a better ration for your cattle than corn-and-cob-meal with alfalfa for roughage. I think you will find it more economical to let them have all the alfalfa they will eat, but the cattle will not finish so quickly. If you are feeding nine or ten (seventy pounds) bushels per day of corn-and-cob-meal per head, it seems to me that the cattle are consuming an unusually large amount of grain. I would advise you to so regulate the amount at each feeding that it will all be consumed before the next time, in order that the cattle come to each feeding-time with keen appetites. It will take constant observation to secure the best results in cattle-feeding. The old proverb, "The eye of the master fattens the cattle," is a true one and you should be constantly on the lookout to see that the animals are in good thrift and have good appetites. If you note that they are not thrifty, reduce the quantity of feed a meal or two.

As to the stock food. I do not believe, as a general thing, healthy animals require it. A number of experiments have demonstrated this fact where alfalfa hay of good quality is fed, and in the production of baby-beef it will pay to use the best quality of roughage. I would not advise feeding oil-meal from the standpoint of economy. Alfalfa supplies protein in sufficient quantity. It may help you to secure a little better finish to feed a little oil-meal at the latter end of the feeding-period.

As you are a beginner in cattle-feeding, it would have been better if you had made your first attempt with older cattle, as special care is required to successfully produce baby-beef.

G. C. WHEELER.

Feeds for Hogs.—Feeding Stock on Shares.

Would you oblige a reader by answering the following questions through the KANSAS FARMER?

1. Can hogs be matured successfully on Kafir-corn and Milo maize? What would be the best way to feed it? If any addition is needed to make it a good or sufficient food, what would it be?

2. In keeping one or more brood sows for a share of the increase, what would be a fair deal of that kind?

3. In keeping cows for a share of the increase, what are the usual conditions?

4. Is there any way to prevent a cow from urinating while being milked?

5. What would be a good mixture to sow, to cut green for hogs, when they can not be pastured.

C. M.

Barton County.

The question of maturing and fattening hogs on Kafir-corn is one which has been made the subject of a number of experiments here. Bulletin No. 95 on "Fattening Hogs on Drouth-Resisting Crops," gives the results of a series of seven or eight experiments in which twenty-one lots were fed Kafir-corn either as a whole or a part of the ration. In some of these trials Kafir-corn showed a value of 89 per cent of that of Indian corn. The digestible nutrients contained in Kafir-corn vary little in proportion and

quantity from those of Indian corn, being slightly less in carbohydrates and fats. Neither Indian corn nor Kafir-corn supply enough of either protein or mineral matter for the proper growth and development of swine; and in order to mature hogs on Kafir-corn it will be necessary to feed some protein feed in connection with it, such as alfalfa-pasture, skim-milk, soy-bean-meal, shorts, or tankage. Kafir-corn has been fed at this station both whole and ground, wet and dry. Wetting the whole grain at feeding-time was found to be a very successful way of feeding especially where skim-milk can be used. As a rule, we prefer to grind it and mix it with some of the protein feeds, soy-bean-meal being one of the best for this purpose. Hogs will tire of Kafir-corn rather quickly if kept on it as a steady diet, but where it is fed in connection with rather laxative protein feeds this result is not apparent. Alfalfa hay may be fed to fattening hogs to supply the required protein. In Bulletin 95, Professor Cottrell stated that Kafir-corn and skim-milk made the best gains in the series of experiments.

Regarding the share of increase to be retained for the keeping of brood sows, it would seem to me that one-half would be a fair deal for both owner of the sows and for the man feeding and caring for them; however, I have not given the subject very close attention and may be wrong in this. In the case of cows kept on shares, I believe half of the increase is the usual condition for the care and keeping.

I know of no method of curing the disagreeable habit of the milch cow mentioned. I would suggest that something be tried that will keep her attention attracted in a different channel, somewhat on the theory of the plans suggested for overcoming the balky horse.

Alfalfa would be the best plant to cut and feed to your hogs green. If it be necessary to use some annual plant, I would suggest using the Dwarf Essex rape or oats or sorghum, or a combination of two of these. These may be sown at different periods through the summer and will supply considerable green forage.

G. C. WHEELER.

Warbles.

EDITOR KANSAS FARMER:—I am in possession of a clipping cut from the KANSAS FARMER, issue of March 17, 1904, which I have preserved. I refer to the article by N. S. Mayo, pertaining to warbles or grubs in cattle.

The annual loss estimated at from 50 to 60 millions of dollars in the United States on account of grubby hides, would suggest that more than passing interest should attach to the scientific study of the matter, with a view to remedy as soon as possible.

With this object in mind, I wish to state that it is my belief after studying for years, that Mr. Mayo is mistaken in his theory. I was at one time an ox-driver, and spent the years of my early settlement handling and driving oxen. I have also handled thousands of cattle; and being a lover and a close student of nature, the result of years of study on this matter suggests the possibility of throwing some light on the subject, and correcting some of the erroneous theories concerning the same.

Mr. Mayo states that "warbles or grubs are the larval form of the ox bot-fly, or the heel-fly (*Hypoderma lineata*)," and following with a life history, states that they are "a little larger than a house-fly, and deposit their eggs late in summer in the region of the heels. Being uncomfortable, these eggs are licked off, passing into the throat or gullet, thence boring their way through the animal tissues, locating finally under the skin of the back."

I first wish to state that there is nothing in common between the heel-fly, as we know it, and the fly that lays its eggs in the backs of cattle. The scientific name, *Hypoderma lineata*, does not apply to the family Oestrinae, leach or bot- or breeze-flies, one of which family is known to us as a heel-fly. This fly appears in early spring, on hot, sunny days, and seems to work with the wind. Its course of flight is very swift, and its presence is soon noted by the wild, nervous flight of the cattle, many of which run until nearly exhausted, taking shelter in the shade or near some inanimate object. But the only sure defence seems to be mud or water, and many is the beast I have lost or released after being mired from this cause, in March, April or May.

The heel-fly seldom appears here before March, but this year on a hot day in February some were at work. They seldom bother later than May, and seem

to appear at once and leave in the same way. They may work later in the summer in other localities, but not here.

"The Hypoderma bovis Deeger, or bot-fly of the ox is black, and densely pisse. The larvae are found during the month of May and often before, and in the summer in the tumors on the backs of cattle. And when fully grown, which is generally in July, work their way out and fall to the ground." Packard (Edition 1872, Page 405.)

During the long, hot summer days driving oxen are pestered by this big black fly, often an inch in length. He is a regular gourmand, and picking out a spot where neither horn nor tail can dislodge him, commences to bore through the hide. After gorging himself with blood, he can hardly fly, but either falls or buzzes off. I have often seen a smaller fly, more slender, of the same kind, alight on the drop of blood oozing from the aperture, its action leading me to believe it deposited an egg. We have marked the spots, and a warble always springs into existence there.

The foregoing facts can be substantiated here, and I hope a closer study of the matter may obtain.

The remedy proposed by Mr. Mayo is all we have been able to use so far, but I will watch with interest the cattle that have been dipped.

CHAS. H. JACKSON.

Hodgeman County.
[This letter was referred to Dr. Mayo, now chief of the Department of Animal Industry of the Republic of Cuba, who writes as follows:]

In reply to the above letter by Mr. Jackson criticising a press bulletin published by me some two years ago, I can only say that the "theory" advanced is not mine, and that it is not a theory at all but a demonstrated fact. The only ox bot-fly found in the United States of America is the *Hypoderma lineata*, unless a new one has been found in the past two years. This fly belongs to the family Oestrinae, "bot-flies or breeze-flies" and is called the "ox bot-fly or heel-fly." It is possible that in different localities it may have a local name or some other fly may be called a "heel-fly." The authority quoted by Mr. Jackson is nearly thirty-five years behind the times. If Mr. Jackson will write his Senator or Representative in Congress, and ask for Bulletin No. 5, New Series United States Department of Agriculture, Division of Entomology, he will find some valuable information on this interesting subject and he will also find that there have been many scientific discoveries made since 1872.

I may add that the ox bot-fly has been recently introduced into this Republic from the United States, and so far as I have been able to determine, the adult fly may deposit the eggs upon the hair of cattle at any season of the year in this land of perpetual summer.

N. S. MAYO.

Chief Dept. Animal Industry, Republic of Cuba, Santiago de las Vegas.

Alfalfa for Horses and Brood Mares.

Is alfalfa hay considered good feed for young horses and brood mares? Our hay crop was short last summer and I have to buy. I had intended to buy alfalfa, but some of our people have the impression that it is not good for horses. Personally they know nothing about it for it has never been used here. I feel at liberty to ask you the question because I am one of your subscribers and know that you will give me the information. W. R. DELANEY.

Johnson County, Missouri.

There seems to be considerable prejudice against alfalfa hay as a horse-feed in some sections. This prejudice is without foundation as is evidenced by the experience of many practical feeders and horsemen. J. W. and J. C. Robison, the Percheron horse-breeders of Kansas, depend upon it almost exclusively for the production of their famous draft-horses. Henry Avery & Son of Wakefield, Kans., rely almost exclusively upon alfalfa hay and pasture for the production of their Percheron horses.

Alfalfa hay contains digestible nutrients per 100 pounds as follows: Protein, 11 pounds; carbohydrates, 39.6 pounds; ether extract, 1.2 pounds. Timothy hay contains digestible nutrients per 100 pounds as follows: Protein, 2.8 pounds; carbohydrates, 43.4 pounds; ether extract, 1.4 pounds. Wheat bran contains digestible nutrients per 100 pounds as follows: Protein, 12.2 pounds; carbohydrates, 39.2 pounds; ether extract, 2.7 pounds.

At the Utah Experiment Station the comparative merits of alfalfa hay and timothy hay has been investigated in

Clean Bones

Any kind of growth knocks the price of the horse. Usually his services are lost too, 99% of these, including Spavin, Ringbone, Curb and Spiint are cured by

Kendall's Spavin Cure Used Two Years Successfully.

West Hampton Beach, L. I., N. Y., June 22, 1905.
Dr. B. J. Kendall Co., Enosburg Falls, Vt.
Gentlemen—Please send me a copy of your "Treatise on the Horse and his Diseases." I have a stable of fine horses and have used your Kendall's Spavin Cure for two years with the very best of results, and cannot speak too highly of it.
Yours truly,
John Custer.

Price \$1; 6 for \$5. Greatest known liniment for family use. All druggists sell it. Accept no substitute. The great book "A Treatise on the Horse," free from drug-gists

tests with work-horses and driving horses for a period extending over four years. It was found that the timothy ration was more expensive and the horses did not maintain their weight so well as on the alfalfa-hay ration. Tests were made in which alfalfa hay was also fed without grain, it being found that twenty pounds daily of alfalfa was sufficient to maintain a 1,400-pound horse where no work was performed. It required 33 pounds of alfalfa to maintain the same horse while performing hard work. It was found impracticable to maintain a horse doing very severe work on alfalfa hay alone, some grain being required.

Experiments conducted at the Wyoming Station gave similar results, much less grain being required where alfalfa hay was used in the ration.

The California Station, in discussing the results of alfalfa-hay feeding for horses, states that where alfalfa hay is available, the protein required can be supplied with much less grain than where the coarse fodder consists of the cereal hays or meadow grasses.

For the feeding of colts and growing horses I would not hesitate to recommend the feeding of good-quality alfalfa hay, giving them practically all that they will clean up. The brood mares will do well on this hay and it will be more economical than to purchase prairie hay or timothy hay, much less grain being required. G. C. WHEELER.

Cottonseed-Meal.

Will you be so kind as to send me copies of the following bulletins: No. 39, 47, 51, 53, 61, 67, 111, 118, and 124? Have you had any experience in feeding cottonseed-meal or oil-meal for fattening steers? If you have anything in regard to that, will you please send it to me and oblige?

Saline County. C. KNUDSON.

You have undoubtedly received the bulletins requested and by studying them carefully you will be able to secure considerable information on this subject.

Cottonseed-meal and oil-meal have very high values in the fattening of steers especially where alfalfa hay or clover hay are not available as roughage. These meals contain a very high percentage of digestible protein and if you are feeding corn and corn-stover, Kafir-fodder, or prairie hay as roughage, at least 10 per cent of your grain ration should be cottonseed- or oil-meal for the best gains and most economical results. Cottonseed-meal is the richer of the two and is also slightly cheaper. It may be fed to mature steers up to three pounds daily with perfect safety and even larger amounts may be fed to mature cattle for short periods. Your feed-bunks must be so arranged that no cottonseed-meal will be wasted on the ground so as to be eaten by the hogs, or you will be liable to lose some of them.

If you have alfalfa hay for roughage, I would feed little if any cottonseed-meal, alfalfa supplying the required protein more economically.

G. C. WHEELER.

Signs of the Zodiac, Have They Influence?

What influence have the signs of the zodiac on animal husbandry, particularly in relation to castration and weaning of young? C. F. C.

Mitchell County.

Answer.—If the signs of the zodiac have any influence on animal husbandry, we have never heard of it. We do not study the signs of the zodiac in connection with animal husbandry, and it is our opinion that its signs have absolutely nothing to do with the castration and weaning of young animals.

R. J. KINZER.

Feed and Care of Breeding Horse.

I have a 7-year-old stallion (Percheron) which has been out all winter with a herd. What is the cheapest and best feed? There is no alfalfa here but there is good prairie hay. Is Kafir-corn fodder good for a horse during breeding season?

How many mares can be bred during three months? What is best to keep the hair in good condition or what would be best to make him shed, and grow new hair?

Please give your advice on feed, how much to feed, breeding, in what kind of a place to keep him, and the number of mares per day. W. N. KINZER.

Stevens County.

It is never advisable to feed a breeding stallion much corn; but if this horse is in thin condition, he can be built up cheaper with corn than with any other feed. Alfalfa would be a most excellent feed to give him, but if this can not be had, oil-meal and bran can be used in connection with prairie hay to add protein to the ration and im-

prove his condition. Oil-meal will also help to shed earlier, and will make his coat look sleek and bright.

A stallion of this age, during the season, should serve from 80 to 100 mares and oftentimes he is allowed to serve even more than this. He should be given a good, roomy box-stall and have plenty of exercise. It is a common practice to give a stallion a yard or paddock in which to take exercise, but there is some danger of a horse's injuring himself, and with a valuable horse it is preferable to lead him out for exercise.

A grain ration of about 50 per cent corn, 30 per cent oats, and 20 per cent bran, with a little additional oil-meal should put the horse in good condition.

R. J. KINZER.

Hutchinson's Poland-China Sale.

We desire to call attention to the advertisement in this paper of the great Poland-China sale of James Hutchinson of Bellaire, Kansas, which he will hold at Norton, Kansas, Saturday, March 24. Breeders of this popular type of hog should remember that the greatest objection to the Poland-China is the size. For several years the leading breeders have overlooked this necessary quality in their efforts to breed something fancy. The result has been that the farmer has taken up the Duroc, not because of his admiration for him, but because he knows that the end of all is the pork-barrel, and that size is an absolute necessity.

Mr. Hutchinson is a veteran in the hog business. He has showed at all the important fairs in Nebraska for several years, and has always carried away his full share of prizes. We regret that we have not the space to give a complete list of them. If you are a breeder, look over his advertisement and note some of the great animals he has raised. His brood sows are all of the large heavy type, are good mothers and producers of large litters.

When at his farm last week, Mr. Hutchinson took us to the barn where his sows were farrowing. One had farrowed thirteen, another nine, another seven, and still another, ten pigs. We were surprised at the large litters, but he informed us that nearly all of his sows farrowed nine pigs or more. A few years ago a farmer drove to Mr. Hutchinson's place and bought a sow; some days later he came back and bought several more. From this foundation stock he started, and is now one of the coming breeders of the State. At his sale this spring his bred gilts brought an average of over sixty dollars per head.

If you want to put some new blood in your herd, or are just starting one, take this opportunity to get some of these large-boned hogs. Arrange to attend this sale, or if you are unable to attend, write your wants to C. E. Shaffer of the KANSAS FARMER and they will receive careful attention.

Ward Bros. Duroc-Jersey Sale.

Ward Bros. sale of Duroc-Jersey swine, held at Republic, Kansas, on Tuesday, March 6, was very successful, though the day was stormy and many buyers were undoubtedly prevented from attending. The Ward Bros. are among the old-time breeders of Duroc-Jersey swine, and they have the confidence of the people. The bidding was lively. The stock offered was highly-bred and in good condition and buyers were anxious to get the good things offered. Following is a complete list of purchasers at this sale which averaged \$49.36 for the entire offering. Albert Ward, Belleville, Kan.; James Logan, Frankfort, Kan.; T. Mendenhall, Fairbury, Neb.; C. E. Shaffer, Topeka; John Jones & Son, Concordia, Kan.; J. F. Lane, Guidle Rock, Neb.; A. A. Nire, Republic, Kan.; T. J. H. Flight, Republic, Kan.; Fred Collins, Belleville, Kan.; J. T. Chandler, Frankfort; Geo. Kerr, Wakefield, Kan.; Mac Wesley, Bancroft, Kan.; John Jones, Clyde, Kan.; A. Prue, Republic; James Logan, Onaga, Kan.; W. L. Vick, Junction City, Kan.; Ben Lebold, Republic, Kan.; Dick Ward, Belleville, Kan.; Henry Collins, Republic, Kan.; Emmet Price, Republic, Kan.; G. W. Soilenberger, Woodston; Marshall Bros., Burden, Kan.; H. H. Howell, Republic, Kan.

Herefords at Kansas City.

The combination sale of Hereford cattle at the Fine Stock Pavilion, Kansas City, held under the management of Secretary C. R. Thomas, last week resulted in the disposal of 87 head. The 45 bulls averaged \$104.50 and the 42 females averaged \$108.25. Good judges of Herefords pronounced these values to be at least \$25.00 too low for the quality of the animals offered.

The top price of the sale was \$400, which was paid for Steele Bros.' cow, Princess May 2d, who went to S. W. Anderson, Blakers Mills, West Virginia. Steele Bros. also sold the second highest female for which they received \$216.

The highest price paid for a bull was \$305 given for Preceptor 232358, who went to Iowa.

The list of buyers is as follows: Thomas Brown, Ottawa, Kan.; J. B. Dale, Pionsanton, Iowa; H. H. Snyder, North Branch, Kan.; C. A. Stannard, Emporia, Kan.; R. T. Pence, Napan, Mo.; J. A. McKittrick, Greenwood, Mo.; Thomas Benson, Topca, Kan.; Chas. W. Embry, Ottawa, Kan.; Joseph T. Clark, Platte City, Mo.; H. Kallor, Longton, Kan.; A. L. Weston, Colorado Springs, Colo.; John Murphy, Frankfort, Kans.; F. W. Preston, Blue Rapids, Kan.; W. L. Lacey, Kansas City; Suter Bros., Zurch, Kan.; R. M. Dobson, Independence, Kan.; H. F. Kilburn, Tyro, Kan.; L. E. Potter, Springfield, Minn.; Jones Wren, Keytesville, Mo.; A. Metzger, Lone Star, Kan.; Oscar L. Mills, Fort Smith, Ark.; Mrs. K. W. Cross, Emporia, Kan.; J. A. Larson, Evarest, Kan.; T. P. Whittonberg, Pleasant Hill, Mo.; S. J. Brock, Macon, Mo.; J. Lalviette, Florence, Kan.; L. J. Johnson, Halbut, Iowa; R. M. Hall,

This sale was conducted by Cols. R. L. Harriman and Jas. W. Sparks, assisted by Cols. J. J. Wells, W. D. Ross, C. J. Hieronymus, J. D. Thompson and John D. Snyder. Colonel Harriman opened the sale with a good, intelligent review of the jack and mule business of the United States and particularly of the successes of the animals from Limestone Valley. He sold the first 15 head, the first 10 averaging \$1,117.50. Colonel Sparks then took the gavel, and while the better jacks had been sold, quality considered, he held the values up strong to the close.	110

Honeyman & Reed Poland-China Sale.

On March 2, at Madison, Kans., a number of breeders of high-class Poland-China swine combined in one of the most successful sales that has been held in Kansas for years. The consignors were W. J. Honeyman, E. E. Honeyman, E. A. Melburn, and A. J. Reed, all of Madison.

The top price was \$335, by I. E. Knox, Nardin, Okla., and J. R. Roberts, Deer Creek, Okla., for Chief's Orphan 5th (by Chief Perfection 2d); the highest price paid for a gilt was \$125, by H. L. Faulkner of Jamesport, Mo. This gilt was also by the old King Chief Perfection 2d. Both of these "tops," in fact, almost the entire offering, was bred to Mr. Honeyman's \$1,000 boar, U. C. Perfection, a State fair first prize winner and sire of first-prize pigs. The sale was a tribute to the value placed on this great boar by the breeders in this territory.

Following is a complete list of sales and buyers.

1. F. Peese, Madison,	\$126

On and On Poland-Chinas.

At Richards, Mo., on March 7, Mr. J. R. Young, Missouri's noted Poland-China breeder, held another of his record-breaking bred-sow sales. This sale has not been exceeded in average price in the whole corn-belt except by the record made by Mr. Young himself in his December, 1905, sale. In these two sales, which aggregated nearly \$15,000, he disposed of 63 sows bred to the great boar On and On, at an average price of \$196.18. Nearly every State in the corn-belt was represented by buyers or mail-order bids at this sale.

The top price in this sale was \$355, paid by J. W. Honeyman, of Madison, Kans., for No. 1 in the catalogue, Lady Foster 67332, an extra fine sow by Foster's Chief Perfection 48021 and bred to On and On.

The sale was conducted by Cols. D. P. McCracken, H. O. Correll, J. W. Sparks,

How to Build a Telephone Line to Your Farm

FREE We have just published several new books, which we will send free to parties interested. They tell how to proceed to build a telephone line to your farm; how to interest your neighbors; how to organize the company, and how easily and cheaply such a line can be built. One of the books describes

Stromberg-Carlson Telephones

the kind that makes rural lines successful. Write for book 129-J, "How the Telephone Helps the Farmer," and also for the book, "How to Build a Rural Telephone Line." They will furnish you valuable information you can get in no other way. Simply drop us a postal card asking for them, and for any other facts you may desire. Do it today and save delay.

Frank Georgia's Sale.

Frank Georgia's sixth annual bourse sale was held at Mankato on February 24. Everything favored a good sale and it was one of the best ever held in that part of the State. The weather was fine, the crowd large and ready to buy, and the offering was one not to be excelled in any sale-ring. Thirty head were sold within a very short space of time, making an average of \$25 and a few cents. The buyers were chiefly among the neighboring farmers, who are acquainted with Mr. George's hogs, and appreciate their good qualities and excellent breeding.

Following is a list of the highest bidders and the prices paid for them: No. Price.

Some Record Prices at Avery's Percheron Sale at Manhattan, Kan., February 24, 1906.

Fifteen Percheron stallion (with six under 1 year of age), \$9225.00, making an average price of \$615; twenty-five Percheron mares (from 15 years of age to four head under 1 year), \$15,200.00, making an average for mares, \$608.40; a grand average for stallions and mares of \$611.70.

The following records were broken for Percherons at public auction in this sale:

Bosquet 40105 (46612), highest Percheron stallion, \$2825.00; Lens 40417 and Mina 31721, highest pair of Percheron mares, \$2250.00; Fanchon 42853, highest yearling filly, \$750.00; four mares in sale that averaged, each \$1000.00; the highest average on collection of Percheron mares, \$608.40.

Gossip About Stock.

H. H. Hague of Newton, Kansas, reports that in the Harvey County sale his Duroc-Jerseys made an average price of \$33.60, one sow selling for \$46. He also reports the arrival of two litters aggregating 24 pigs, 22 of which have been saved.

An event that will interest many of our readers will be the Janes Stock Farm sale of 34 trotting-bred horses and Standard-bred mares to be held at the State Fair grounds, Topeka, Kans., on Tuesday, April 3, 1906. The horses will be shown at the State Fair grounds prior to the sale. A great many of the horses in the offering are sired by General Evans 13166, 2:26%. For information and catalogue address C. N. Janes, Willard, Kans.

E. E. Axline, the big Poland-China breeder at Oak Grove, Mo., and Dr. O. L. Kerr, the breeder of the Champion O. L. C.'s, Independence, Mo., will hold a sale of these two breeds at Independence, Mo., on April 5, 1906. There will be 30 head of each breed in the sale. Mr. Axline has selected some excellent animals for this sale and requests breeders and all who contemplate purchasing to send for a catalogue which is free for the asking. A cordial invitation is extended to all who are interested in either breed to attend this sale.

Any one needing a farm should read the advertisement of the Norton Land Company in this paper. They desire especially to call attention to the last two farms in the list. If you want something worth the money, write them at once. These farms are in Norton County, which has 30,000 acres of alfalfa and where every farmer is prosperous. One bank alone at Norton has over \$450,000 in deposits which belongs to the farmers. It will pay you to write them and mention THE KANSAS FARMER.

R. F. Norton & Son, owners of the Orchard Hill herd of Duroc-Jerseys write as follows: Can any one beat it?

"I noticed the mention of a big pig raised by Taylor and Wolff in your paper of March 8. We have one sired by Tip Top Notch Champion boar at the World's Fair at St. Louis which we think is making a good gain. For the seven days ending February 24, he gained 17 pounds. He next week ending March 3, he gained 16 pounds. Thus making 33 pounds actual growth (not fat), in 14 days. He is now six months old and weighs 175 pounds beside losing three weeks on account of having been hurt in shipping."

We recently visited the stock farm of Chas. Morrison & Son at Phillipsburg, which is one of the best kept stock farms in Kansas. Mr. Morrison is a breeder of Red Polls and Poland-China hogs. His cattle are among the best in the State and he has built up a reputation among breeders that enables him to dispose of all his young stuff as fast as he can produce it. Mr. Morrison carries a yearly card with the KANSAS FARMER and says it has brought him excellent results. Of the large number of bulls he raised last year he only has four or five left. If you need anything of his breeding it will pay you to write him.

The Diamond Creek Stock Farm, owned by J. W. Creech of Herington, will have a sale of 50 head of Standard-bred horses at Herington, Kans., on Monday, March 26, 1906. The offering consists of brood mares, young stallions, geldings and fillies ranging from 1 to 3 years old. The leading farm stallion is Escobar 2:13 1/4. He is a grandly-bred sire and his get show splendid style and finish. Catalogues may now be had on request and contains some special attractions including Angelbar, lot 4. Matched teams, lots 6, 8, 14, and 16, comprise two matched teams that will interest discriminating buyers.

G. M. Scott, Rea, Mo., held a very successful jack sale at Savannah, Mo., the 8. He sold jacks and mules for a total of \$18,057.50, a pretty good day's business in the disposition of the produce of a part of the Quiet Glenn Farm. The 21 jacks sold for an average of \$682.56; Two sold for \$1,200 each, and another for \$1,000; half the offering were 2-year-olds. Kansas got some of the best, No. 5 of the offering going to Henry Loeb, Baxter, at \$1200. A. D. Sanders, of Parnell, Kansas, was another purchaser; others were W. C. White, T. G. Sanig, Yorktown, Ia.; G. E. Hanks, Nebraska, Clay, Neb.; Oliver Ott, Allen, Mo.; W. C. Martin, Pleasant Hill, Mo.; as Millen, King City, Mo.; Ollie Iverson, Blaken, Neb.; W. L. Nixon, Pleasant Hill, Mo.; W. J. Rhodes, Lee's Summit, Mo.; W. R. Hillman, Hebron, Neb.; Dysart Bros., Barnard, Mo.; Henry Ferguson, Westmoreland, Kan.; Allen Cunningham, Clyde, Mo., and Nels F. Pearson, Stanton, Ia. The sale was conducted by Jas. W. Sparks, and William Brooks, and is considered one of the very successful sales of the season.

U. S. Ison, W. G. Sellon and J. L. Gere will hold a sale of Poland-China hogs and Shorthorn cattle at Butler, Mo., March 23. These gentlemen are selling an excellent lot of stock. Mr. Ison sells one cow and three young bulls, twenty-nine head of hogs, twenty-three sows and gilts, including one by Meddler, one by Corrector 2d, others by Goldfinder, a litter brother to Corrector Goldfinder and Royal Perfection. He also sells five hoars, good ones of the same breeding. Sows and gilts are bred to Goldfinder or Despatcher, one of the litter that sold for \$2,250 last fall, and whose dam recently sold for \$1,010. A litter by this great pig should be an attraction in any herd in the land. Mr. Sellon sells nine lusty young bulls of serviceable age. Most of them are old enough for range use and eight 2-year-old helpers. These are all by the Scotch bull, Chief Elector 2d, and bred to a son of Imp. Conqueror, one of the best Scotch-topped American families, nearly all Young Marys. Mr. Gere sells five fall boar pigs by Goldfinder, four of them are out of a Mischief Maker dam. All in all the breeding and individuality of the offering gotten together by these gentlemen should attract good breeders and farmers wishing to buy the best foundation stock. It is not expected that it will be a high-priced offering, so we think it a good place to go to get good Poland-Chinas and Shorthorns. If you can not attend, send bids to auctioneers, Sparks and Snyder.

The Shorthorn sale of E. D. Ludwig, held at Sabetha last week, served to attract a large crowd of buyers in search of his good cattle. Owing to the fact that the amphitheater containing the crowd of buyers fell with a crash almost immediately after the opening of the sale, and this was followed by a heavy windstorm which practically destroyed the sale-tent, the buyers were more or less demoralized and the prices realized were much below what they might otherwise have been. Some of the animals in the sale were consigned by the local breeders. The 26 head sold by Mr. Ludwig brought \$2,872.50, an average of \$110.48. The total offering of 39 head made an average of \$100.40. The top was \$255, paid by J. O. Kimmel, of Sabetha, Kans., for the herd bull, Harmont Knight 148795. The young bull, Scotchman 245103, was well sold, going at \$225 to J. P. Lahr, Sabetha, Kans. A. B. Simms of Troy, Kans., paid the next higher price, buying Sir Victor 253142 for \$140. J. O. Hunt, of Marysville, Kans., topped the female section, paying \$130 for the Cowslip cow, lot 6. Mr. Hunt and Everett Hayes bought several of the best cows and helpers. Among other good buyers were: William Pechi, Morrill, Kans.; T. A. Isenbise, Morrill; J. A. Windle, Falls City, Neb.; John Laseumbe, Circleville, Kans.; Rufus Miller, Morrill, Kans.; A. R. Lanning, Sabetha, Kans.; A. B. Van Dyke, Sabetha; M. Bigley, Sabetha; Roy Isenbise, Morrill; R. A. Smith, Summerfield, Kans.; Ed. McCoy, Sabetha; John Draney, Sabetha; William Davis, Morrill; T. K. and George Masterson, Sabetha; W. N. Ord, Sabetha; J. C. Strom, Sabetha; Chris Coffey, Ax-

MASTERS' ANNUAL ADDRESS.

**Words of Aaron Jones on Retiring From
the Position of Worthy Master of
the National Grange.**

We have assembled in the thirty-ninth annual session of the National Grange representing the agricultural industry of the country, not only to discuss its condition and to devise ways and means of advancing the interests of this great basic industry and thereby promote the welfare of the tillers of the soil, but in a broader sense to advance the interests of the American people, for whatever promotes the welfare of agriculture promotes the welfare of every other industry. It is peculiarly appropriate to come together with this laudable ambition within the borders of the productive State of New Jersey and upon the shores of the broad Atlantic, prolific with commerce made possible by the products of American farms. The conditions surrounding our meeting place should inspire a comprehensive view of the general situation without detracting in the least degree from the well-established reputation of the Grange for loyalty to the industry it represents.

CONDITION OF THE ORDER.

Since our meeting one year ago upon the Pacific Slope, there has been constant and substantial growth of the organization in membership and activity in all sections of the country. Many dormant granges have been revived, new granges established and over 60,000 added to the membership. This growth has not been confined to any locality but is observed in the States on the Pacific Coast, in the great agricultural States of the Middle West, in the South and in the Central and Eastern parts of the country. The progress of the organization in social and mental development among the rural people, and in influence upon public affairs, can be cited in every State where the organization is established. A recital of the victories won in promoting culture and refinement, intelligence and thrift, exemplary citizenship and happy homes, and in securing wholesome legislation and the fearless enforcement of laws, would reveal an influence exerted without a precedent by the farmers of the country in the battle for social advancement and that justice and equality vouchsafed to all by the constitution of our country. I congratulate you upon the present condition of the order and its favorable position for effective work in the future.

EDUCATION.

The corner-stone of our organization is education, affording its members the opportunity, through cooperative effort to study the principles of advanced agriculture, including the relation of the elements of the atmosphere to the elements of the soil; the relation of elements of food to the requirements of plant and animal life; the combating of plant diseases and the suppression of injurious insects and fungus growth; as well as the opportunity to study domestic science, political economy and that form of politics known as the science of government. The improvement of rural schools, the introduction of the principles of agriculture in the public school curriculum, the policies of agricultural colleges, and the investigations of experiment stations are educational matters that come with the scope of our work. The ritual ceremonies, which for sublimity and pathos are unexcelled by the ritual ceremonies of any organization, are educational in their

effect upon all who participate in them. These matters contribute to mental development after school days are past, and supplement the cause of public education with a system of such practical utility as has been unknown in the history of the world. As an organization we advocate that form of public education that teaches the boys and girls how to do things as well as why things are done. We reiterate that clause in our Declaration of Purposes, made in 1874, which says, "We especially advocate for our agricultural and industrial colleges, that practical agriculture, domestic science and all the arts which adorn the home be taught in their courses of study, and so far as is practicable we advocate instruction as a means of mental development in our public school system."

AGRICULTURE.

The present season has been favorable for crop-production and producers of nearly all kinds of crops have secured abundant harvests. The fruit and grain crops of the Pacific Coast, the corn and wheat crops of the Middle West, the cotton crop of the South and the dairy feeding crops of the Eastern States have yielded abundantly, and the barns and storehouses are bursting with plenty. Business prosperity is unprecedented and on every hand the transportation, manufacturing and commercial affairs through the operations necessary in transferring those crops to the consumers, and in furnishing those engaged in growing and handling them with supplies is being carried on. Agriculture being the only industry that produces things, is the only industry that can increase the real wealth of the country. Manufacturing may change the form, transportation the location, and trade the ownership of property, and each industry may afford profitable employment for a vast number of people; but it is agriculture that furnishes the base of these operations by bringing into existence real property that did not exist before. In view of these facts, agriculture is entitled to greater consideration than any other industry in fixing the policies and enacting the laws of the Nation, and to secure a recognition of this principle is one of the prime objects of organization among farmers.

AGRICULTURE A PROFESSION.

At no time in the past has agriculture been in a position to be classed as a profession so much as at the present time. The old-time practices which might be appropriately termed muscle farming, have given way to modern methods, which require mental activity as the chief requisite. Farm machinery has taken the place of manual labor and nitrogen-gathering plants in an intelligent rotation of crops have partially superseded dependence upon natural soil fertility or the application of elements of plant-food to the soil. The development of desirable characteristics by intelligent breeding of animals and consequent elimination of undesirable characteristics, requires knowledge and skill in animal industry unknown even to scientists a generation ago. The protection of fruit and vegetable crops from injurious insects by the application of poisonous substances, and making available plant-food in the soil through the admission of air and the conservation of moisture, have come into general use in recent years and are as essential to profitable agriculture as planting the seed or harvesting the crop. These and other practices have become an absolute necessity for successful husbandry, and require an intimate knowledge of the science of agriculture. This may be obtained at home through courses of study of agricultural text books, or by close observation of the methods of those who have acquired the knowledge through one or more of these various sources. Even the extensive cereal producers of the great prairie States, and the extensive livestock growers of the more remote sections of the country, are finding that an intimate knowledge of the principles underlying their respective branches of agriculture is essential to success. Attention to this matter is raising the occupation of the farmer from one of muscular exertion without mental discipline, to an occupation requiring mental exertion of the most elevating character, and is placing the tillers of the soil in the class from which leaders in public matters requiring mental development may be selected. It is changing farming from drudgery to pleasure, and the farmer from a "hewer of wood and drawer of water" to the peer of professional men in mental capacity and equipment. It causes him thereby to respect his occupation more, and causes people engaged in other occupations to place a higher estimate upon him as a man and a citizen.

THE PRESS.

The rapidity with which the agricultural press has advanced in recent years, both in circulation and efficiency, is evidence of the enterprise of publishers in keeping pace with the general agricultural progress and of the increased interest among the people in reading agricultural matter. Even a more general interest in such publications as now exists would be of advantage to intelligent and successful farming. Frequent and regular reading of good agricultural papers by farmers with sufficient discrimination to determine what is reliable and applicable to their soil and conditions, and changing their methods in accordance therewith, is a matter of the greatest importance and may render valuable assistance to them. Many of these papers conduct grange departments in which articles of special interest to members of the organization regularly appear, and in the aggregate give wide publicity to grange matters. These departments are mutually advantageous to the publisher of the paper and to the grange readers. The Quarterly Grange Bulletin, issued by the lecturer of the National Grange, under the direction of the executive committee, has now been issued ten years and has regularly carried the suggestions of the National Grange to the members of every grange in the country. This publication is unifying, stimulating and directing thought and discussion along practicable and profitable lines, and was, and is of very great value to the order and the people in developing a better type of citizenship. I recommend that this publication be continued and issued weekly. Many of the agricultural papers have quoted largely from its columns, and one, the American Grange Bulletin and Scientific Farmer, has published it in full, and I am advised has sent sample copies to every grange in the United States. As Master of the National Grange, I desire to extend the grateful thanks of the order to all papers that have assisted in disseminating grange thought.

AUTOMOBILES.

No innovation in modes of travel has caused more general comment, both favorable and otherwise, than the appearance of automobiles upon country roads and the consequent disturbance of travel upon those roads. Accidents of the most shocking nature have been of common occurrence as reported by the press, and an innumerable array of minor disasters on account of fright of horses from these machines, might be presented. In fact, in some sections of the country, travel upon country roads has been reduced to the driving absolutely necessary for the conduct of business, cutting out all pleasure driving because of fear of accidents. There is no doubt of the right of autoists to legitimate use of the highways, but that use should be regulated by wise laws vigorously enforced and the penalties for their violation should be sufficiently severe to serve as an effectual warning against violations by others. The reputable autoists owe it to themselves to join with the people in this movement against the reckless for the protection of life and property, and their own reputation as honorable, law-abiding citizens. It would be well to have uniformity in such laws in the various States, and a uniform policy for their vigorous enforcement; for the lives of our people are of more importance than the pleasure of a few people from rapid and reckless riding.

AGRICULTURAL COLLEGES AND EXPERIMENT STATIONS.

By common consent the grange is the representative of the farming class in discussing the work of agricultural colleges and experiment stations, as well as in securing appropriations for their support. The recent rapid development of an agricultural science and the awakened public interest in agricultural education renders it of the utmost importance that the colleges and the farmers have a true conception of the aid that each can render the other. If the chief aim of an agricultural college is to educate out of agriculture into other industries, it will render but little aid to agriculture; if the farmers fail to comprehend the advantages of an agricultural education, they will secure but little benefit for their industry from these colleges. With a just appreciation of the fact on the part of the managers of these institutions that the primary object in their establishment was the advancement of agriculture, and on part of the farmers that they should avail themselves of the opportunity afforded by these institutions for educating their boys or other boys in this great science, there will be such an impetus given to intelligent and profitable agriculture as can come from no other

Paint Without Oil

Remarkable Discovery that Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package and a Big Book Telling All About Paints and Paint-Making are Mailed Free to Everybody Who Writes.

A. L. Rice, a prominent manufacturer of Adams N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdorpaint. It comes to you a dry powder and all that is required is cold water to make a paint weatherproof, fireproof and as durable as oil paint. It adheres to any surface, wood, stone or brick, it spreads and looks like oil paint and yet only costs one-fourth as much. For many purposes it is much better than oil paint and is indispensable to every property owner.

Write to Mr. A. L. Rice, 392 North St., Adams, N. Y., and he will send you a free trial of his new discovery, together with color cards and his valuable book on Painting, all free. This book lets you into all the secrets of paint-making, exposes fake paints, tells you what kind of paint to use for different purposes and shows you how you can save and make a good many dollars. Write today and the book and free trial of Paint will be sent you by return mail.

60 DAYS FREE

WE WILL SEND any windmill we make to

any address to be given
60 DAYS FREE while you
can have with your
mails that others sell at
two to four times our
price, and if you don't
find our Kenwood runs
easier, has more power, requires less
attention, easier to set up and handle
(any farmer can easily set it up),
pumps more water, runs in lighter
wind, if you don't find it stronger,
handsomer, better made and worth
more than any other windmill made, return it to us
at our expense and you are not out one cent.

\$11.12 buys our new 1906 Kenwood all steel,

anyone can set up in a few hours. \$12.08 buys

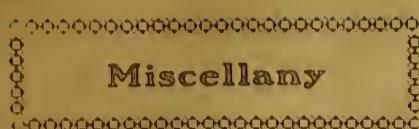

our latest 1906 style, best and strongest all steel
Kenwood. Cut this out and send to us, or on a
postcard or letter to us say, "Send me your Free
Windmill Offer," and you will receive by return mail,

our latest big Special Windmill Catalogue,
showing a great variety of pumping and power wind-
mills in all sizes, a great variety of steel towers, tower
tanks, etc. you will get our Free Trial Offers, the most
wonderful windmill proposition ever heard of.

**THIS BIG 6-FOOT FULL SIZE
COUCH FREE** if you let us send
you a windmill or other goods.

Miscellany

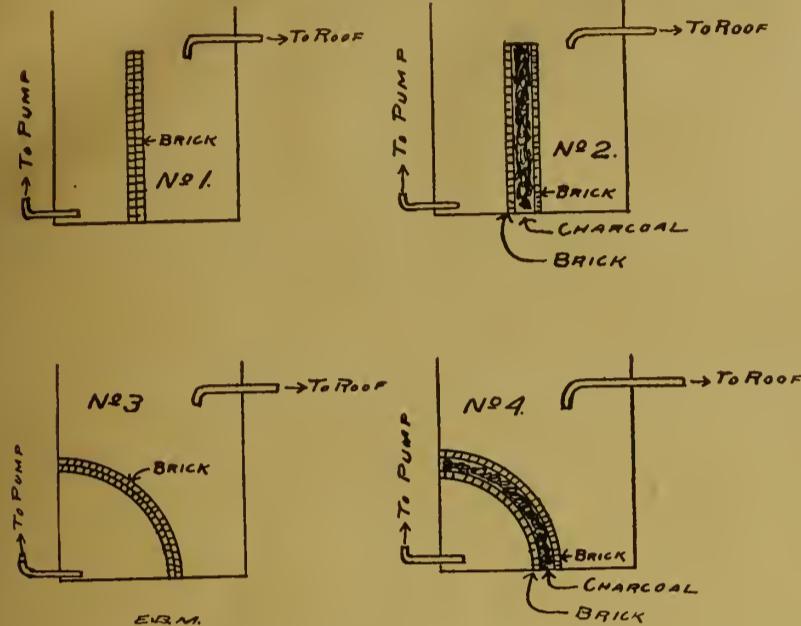

Filters for Cisterns.

EDITOR KANSAS FARMER:—I enclose four sketches showing methods of filtering cisterns. The method shown in No. 1 is the simplest and cheapest and consists of a single or double wall running through the center of the cistern, and built up of porous brick. No. 2

heading, "Remarks on Work With Insects," the reader is referred to one of the bulletins just mentioned, "Common Injurious Insects of Kansas."

HOUSE-FLIES AS CARRIERS OF DISEASE GERMS.

With the approach of warm weather, house-flies will appear again, and the danger arising from their agency in conveying disease germs increases as they multiply. Wherever the accumulated filth of horse-stables is allowed to remain from winter, especially in thickly populated communities as cities

shows a double brick wall with a space of 2 inches to 6 inches between. This space is filled with clean charcoal. This is a more expensive method than the first one, but the water will be purified to a far greater extent. Both of these methods have the objection that the filtered side as well as the unfiltered, is open at the top, thus admitting more or less dirt.

Nos. 3 and 4 show methods by which the filtered part is entirely enclosed. They differ from each other in that No. 4 has a layer of charcoal between the two brick walls which No. 3 has not. No. 4 is the best method of filtering a cistern. If the filtered portion is thoroughly cleaned out before the arch is completely closed, there need be no trouble whatever with dirty water. The water should be supplied near the top of the unfiltered portion and drawn from the cistern near the bottom of the filtered portion, as indicated in the cuts.

Timely Remarks About Insects and Nature Study for Spring Months.

ELBERT S. TUCKER, MUSEUM ASSISTANT IN SYSTEMATIC ENTOMOLOGY, UNIVERSITY OF KANSAS, LAWRENCE.

The following letter to the KANSAS FARMER was referred to me for answer:

"Do you know of any remedy to exterminate grasshoppers, either before or after they are hatched? I was told a remedy was given by a reader of your paper, in some of the recent issues, but if so I failed to see it. Please answer in the columns of your paper. From one who wishes to know."

J. H. SHULL."

Rawlins County.

A review of the methods of combating locusts was presented in my article entitled "Remarks About Injurious Grasshoppers," which appeared in the KANSAS FARMER of September 22, 1904.

The editors can not always supply back numbers, but further information can be readily obtained in the form of insect bulletins which are offered for free distribution by Prof. F. H. Snow, of the Department of Systematic Entomology, University of Kansas, Lawrence, to any applicant who encloses stamps for the required postage. The three bulletins which particularly treat of grasshoppers are, "Common Injurious Insects of Kansas" (postage 5 cents); "The More Destructive Grasshoppers of Kansas" (postage 1 cent); and "Alfalfa, Grasshoppers, Bees—Their Relationship" (postage 7 cents).

NOTICE OF THE SPRING CANKER MOTH.

A warning that the time has come for the spring canker moth to appear was observed February 19, at night, when the first moth of the season was noticed. The enforcement of precautions is now advisable, both for shade trees and orchards. As a valuable source of information in regard to this pest, other than my notes about it which were published in the KANSAS FARMER of April 20, 1905, under the

and towns, every spot of this kind becomes a menace to the public health in affording breeding-places for the flies. Hence the importance of cleaning such premises at an early date is apparent. A very pointed reference bearing on the case attracted my eye in reading "The Terrible Horse," an article by Rene Bache in The Saturday Evening Post of November 25, 1905; the portion quoted here was headed "A Purveyor of Disease."

"A discussion of dangers attributable to horses would be incomplete without some reference to the fact that they are responsible for the existence of the multitudes of house-flies which, apart from the discomfort they cause in summer, are known to be carriers of disease germs. Every stable in warm weather is a fly factory, in active operation night and day. It is safe to predict that within a few years—say a quarter of a century hence at furthest—this nuisance, which continues to exist simply because we have not taken the small amount of trouble necessary to suppress it, will have been practically done away with by the adoption of preventative measures.

"When the annual fly plague ceases to recur, a serious menace to the health of the community—for which we ourselves, and not the poor horse, are really to blame—will have been removed."

INDUCEMENTS FOR NATURE STUDY IN SPRING.

In springtime Nature bestirs herself, and the reviving of life in the trees, plants and wild creatures especially attracts the eager interest of children. No better time is offered for connected reading-courses than when Nature's own object lessons are being most forcibly demonstrated. Two little books that are just adapted for the instruction of the child are called "Plant Life" and "Animal Life," both being written by Florence Bass and published by D. C. Heath & Co., Boston, Mass. Their cost is trifling, the first being priced at 25 cents, the other at 35 cents. They are printed in large, readable type, besides containing numerous pictures in which children delight, and are bound in board covers. The importance of nature study has required the preparation of special books for children, and these two are written in such simple language as to be readily understood by the child of the second and third school grades. What investment to greater advantage can be made for a child than for such aids that train the juvenile mind for accurate perception concerning how and what to observe to the best purposes?

In regard to insect study, since insects are our most abundant forms of life, young people and particularly teachers will find the work by Hyatt and Arms of "Insects," also published by the same company, price \$1.25, as a compact, yet efficient guide, which, itself, is a series of replies to questions that are apt to be asked concerning the structure and habits of insects in all their orders.

DO IT YOURSELF

An attractive feature about Amatite Ready Roofing is that it is really ready to lay when it reaches you.

In many so-called Ready Roofings the purchaser must get nails, cement, and other little articles before he can really begin to lay his "ready roofing." But with Amatite these little extras are supplied free.

Each roll contains nails and every other necessity for putting Amatite properly on the roof. The roofing is absolutely ready to lay. Prepare your roof, then lay Amatite—you will not need to send to the painter or carpenter or blacksmith or hardware store for this, that or the other thing.

Any one can put Amatite on the roof. Just follow the simple directions and you'll have a water-tight, weather-proof roof, that rain, wind, snow or hail can not harm. You can then cut

the "repair item" out of your yearly expenses, for Amatite will require no repairs or painting for years after it has been nailed on.

The protective mineral surface is the feature which makes painting and coating unnecessary, and gives to Amatite a longer life than that of any other ready roofing.

Send for a sample. Test it—read up about it in our booklet. You may not need a new roof now, but get acquainted with the subject, and when the time comes that new roofs are required, you can order Amatite without delay.

A POWER
on Every
Farm

THERE should be a power of some kind on every farm.

It saves labor, time and money, and increases the earning capacity of the farm.

It will work the raw material of the farm into a finished product.

All up-to-date farmers agree that the modern gasoline engine is the best farm power.

Our I. H. C. gasoline engine is the **best gasoline engine**.

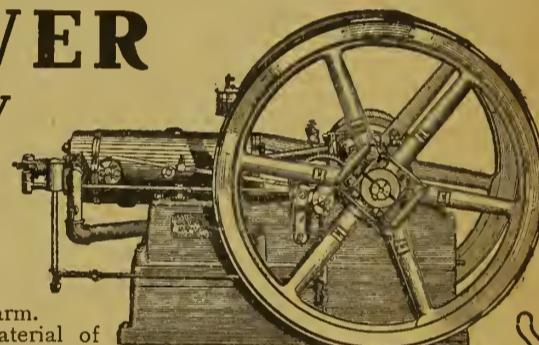

It is strong, durable, long lived and is of full rated, actual (not estimated) horse power.

It is easy to operate and is easily kept in working order.

It develops the maximum of power with the minimum of fuel.

Specially adapted to cutting dry fodder and ensilage, husking, shredding and shelling corn; threshing

INTERNATIONAL HARVESTER COMPANY OF AMERICA, CHICAGO, ILL.

and grinding feed; sawing wood, separating cream, pumping water, etc.

Indeed there is no service required of a power that will not be performed most satisfactorily by this engine.

I. H. C. gasoline engines are made in the following styles and sizes:

Vertical—2, 3 @ 5 Horse Power;

Horizontal—(Portable and Stationary), 4, 6, 8, 10, 12 @ 15 Horse Power.

If you are not intending to purchase an engine now, you may want one in the future and really ought to know more about them.

Call on our Local Agent, let him show you the engines and supply you with catalog, or write for further information. Do it now.

Correct Fence Construction

CORRECT construction is just as important in fence as it is in a house, a bridge, or a wagon. With faulty construction, the best and the heaviest materials avail you nothing. Advance Fence is so constructed as to utilize *all* the strength of the material used. The stay wire is continuous, without an end for many rods. Manufacturers who use cut stays waste about half the strength of the wire. That's bad construction.

Galvanizing. We have recently made special arrangements with a large manufacturer of wire to have our representative always on the ground to see to the proper galvanizing of our wire and to reject all wire not properly galvanized. This insures the long life of Advance Fence.

We sell direct from factory and thereby cut out all unnecessary handling and profits of go-betweens. This makes quite a saving.

Thirty Days Free Trial. Place your order with us for what fence you need. After thirty days, if it does not suit you, return it to us at our expense and get your money back. That's fair.

We Prepay Freight and guarantee safe delivery.

CONDUCTED BY RUTH COWGILL.

Towser Shan't Be Tied To-Night.

(Reprinted by Request.)

Slow the Kansas sun was setting
O'er the wheat fields far away,
Streaking all the air with cobwebs,
At the close of one hot day.
And its last rays kissed the foreheads
Of a man and maiden fair,
He with whiskers short and frowsy,
She with red and glist'ning hair.
He with shut jaw stern and silent,
She with lips all cold and white,
Struggled to keep back the murmur,
"Towser must be tied to-night."

"Papa," slowly spoke the maiden,
"I am almost seventeen,
And I've got a real lover,
Though he's rather young and green.
But he has a horse and buggy,
And a cow and thirty hens.
Boys that start out poor, dear papa,
Make the best of honest men.
But if Towser sees and bites him,
Fills his heart with sudden fright,
He will never come again, pa;
"Towser must be tied to-night."

"Daughter," firmly spoke the farmer,
Every word pierced her young heart
Like a carving knife through chicken
As it hunts a tender part.
"I've a patch of early melons,
Two of them are ripe to-day,
Towser must be loose to watch them,
Or they'll all be stole away.
I have hoed them late and early,
In dim morn and evening light.
Now they're grown I must not lose
them,
Towser'll not be tied to-night."

Then the old man ambled forward,
Opened wide the kennel door,
Towser bounded forth to meet him,
As he oft had done before,
And the farmer stooped and loosed him,
From the dog-chain short and stout,
To himself he softly chuckled,
"Bessie's feller must look out."
But the maiden at the window
Saw the cruel teeth show white,
An undertone she murmured,
"Towser must be tied to-night."

Then the maiden's brow grew thought-
ful,
And her breath came short and thick,
Till she spied the fam'ly clothes line,
And she whispered, "That's the
trick!"

From the kitchen door she glided
With a plate of meat and bread,
Towser wagged his tail in greeting,
Knowing well he would be fed.
In his well-worn leather collar
Tied she then the clothes line tight,
All the time her white lips saying,
"Towser must be tied to-night."

"There, old doggie," spoke the maiden,
"You can watch the melon-patch,
But the front gate's free and open,
When John Henry lifts the latch,
For the clothes line tight is fastened
To the harvest apple tree.
You can run and watch the melons,
But the front gate you can't see.."
Then her glad ears hear a buggy,
And her eyes grow big and bright,
While her young heart says in glad-
ness,
"Towser, dog, is tied to-night."

Up the path the young man saunters,
With his eye and cheek aglow,
For he loves the red-haired maiden,
And he aims to tell her so.
Bessie's roughish little brothers,
In a fit of boyish glee,
Had untied the slender clother-line
From the harvest apple tree.
Then old Towser hears the footsteps,
Raised his bristles fixed for fight,
"Bark away," the maiden whispers,
"Towser, you are tied to-night."

Then old Towser bounded forward,
Passed the open kitchen door.
Bessie screamed and quickly followed,
But John Henry's gone before.
Down the path he speeds most swiftly,
For old Towser sets the pace,
And the maiden close behind them
Shows them she is in the race.
Then the clothes line—can she get it?
And her eyes grow big and bright,
And she springs and grasps it firmly,
"Towser shall be tied to-night."

Oftentimes a little minute
Forms the destiny of men.
You can change the fate of nations
By the stroke of one small pen.
Towser made one last long effort,
Caught John Henry by his pants,
But John Henry kept on running.
For he thought that his last chance,
But the maiden held on firmly.
And the rope was drawn up tight,
But old Towser kept the garments,
For he was not tied to-night.

Then the father hears the racket,
With long stride he soon is there,
Where John Henry and the maiden
Crouching for the worst prepare.
At his feet John tells his story.
Shows his clothing soiled and torn,
And his face so sad and pleading,
Yet so white and scared and worn.
Touched the old man's heart with pity,
Filled his eyes with misty light,
"Take her, boy, and make her happy,
Towser shall be tied to-night."

—Duroc Bill.

Facts About Japan.

While Russia is about twice the size of the United States, Japan is only about the size of the States of Missouri and Kansas combined. It is smaller than Texas. Alaska would make three countries of the size of it. California and Japan are about equal in size. In fact, there are no two political divisions of the earth anywhere which are so nearly alike in extent as California

and Japan. Missouri and Kansas together have a population of 4,500,000; Japan has a population of over 40,000,000, and this, too, without counting the Japanese population that has settled in Korea, in the island of Formosa, and the country adjacent. The idea prevails that Japan is a flowery kingdom and that it is the garden spot of the world. That it has flowers in profusion is a fact, but only one acre out of eight is fit for cultivation. The country is too mountainous and the soil too rocky to permit of being an agricultural country.

The people of the Western States, upon their first view of Japan would never be led to believe that the country was fit for agriculture. However, no portion of the soil is neglected. Every foot of ground is made to yield every iota of substance that it is possible to extract from it. Were this not strictly adhered to the majority of the people would starve, if dependence were not placed on outside sources. The average farm is about the size of the ordinary town lot in America. The greatest food production of the country is fish. It is thus that a country so small, comparatively, with a population so great, is compelled to seek new areas of expansion upon which to cast its ever increasing population. The possession of Korea, right at its side in a large measure affords the relief desired. In fact, for long periods in the past Japan has depended upon Korea for subsistence. Its food supplies came largely from the soil of its nearby neighbor. In consequence of this state of affairs the possession of Korea is vitally necessary to the existence of Japan.—Town and County Journal

Japanese Discipline.

The late war has revealed many things about the Japanese that we might copy and be the better and wiser for so doing. Mr. Lafcadio Hearn, in "Japan," says in regard to the government of children:

"Not merely up to the age of school life, supposed to begin at six years, but considerably beyond it, a Japanese child enjoys a degree of liberty far greater than is allowed to Occidental children. The general rule is that the child be permitted to do as he pleases, providing that his conduct can cause no injury to himself or others. He is guarded, but not constrained; admonished, but rarely compelled. In short, he is allowed to be so mischievous that, as a Japanese proverb says, 'Even the holes by the roadside hate a boy of seven or eight years old.'

"Punishment is administered only when absolutely necessary, and on such occasions, by ancient custom, the entire household—servants and all—intercede for the offender, the little brothers and sisters begging in turn to bear the penalty instead. To frighten a child by loud, harsh words or angry looks, is condemned by general opinion. All punishment ought to be inflicted as calmly as possible, the punisher gently admonishing the while. To slap a child about the head for any reason is a proof of vulgarity and ignorance.

"It is not customary to punish by restraining from play or by a change of diet or by any denial of accustomed pleasures. To be perfectly patient with children is the ethical law.

"At school discipline begins, but it is at first so very light that it can hardly be called discipline. The teacher does not act as a master, but rather as an elder brother, and there is no punishment beyond a public admonition. Whatever restraint exists is chiefly exerted on the child by the common opinion of his class, and a skillful teacher is able to direct that opinion.

"Each class is nominally governed by one or two little captains, selected for character and intelligence, and when a disagreeable order has to be given, it is the child-captain, the kyucho, who is commissioned with the duty of giving it. In higher classes the pressure slightly increases, and in higher schools it is very much stronger, the ruling power always being class sentiment, not the individual will of the teacher.

"It is never the domination of the one over the many that regulates class life. It is always the rule of the many over the one, and the power is formidable. The student who offends class sentiment will suddenly find himself isolated, condemned to absolute solitude. No

Royal Baking Powder Absolutely Pure

DISTINCTIVELY A CREAM OF TARTAR BAKING POWDER

It does not contain an atom of phosphatic acid (which is the product of bones digested in sulphuric acid) or of alum (which is one-third sulphuric acid) substances adopted for other baking powders because of their cheapness.

one will speak to him or notice him even outside the school until such time as he decides to make a public apology, when his pardon will depend upon a majority vote."

Japanese Currency.

The coins now chiefly used in Japan are copper, nickel, silver and gold; but in the country districts it is still possible to find brass coins of less than a mill in value. The copper pieces are $\frac{1}{2}$ sen, 1 sen and 2 sen; the 5-sen piece is the only nickel coin; the silver pieces are 5 sen, 10 sen, 20 sen, 50 sen and 1 yen; and the gold coins are 5 yen, 10 yen and 20 yen. There are also paper notes of 1 yen and upwards. One yen is \$0.4935, and 1 sen equals one-half cent. An American dollar equals 2.006 yen, and an American cent equals 0.02 yen. In 1897 the Japanese adopted the gold standard, so that change fluctuations with the Occident are slight, and the Japanese currency has fixed value at the rate of about 50 cents for the yen.

The favorite maxim of the Japanese is "See no evil, speak no evil, hear no evil."

Tested Recipes.

Hominy.—Shell 6 ears of white corn; put 4 quarts of water and 1 tablespoon of lye in an iron kettle; let come to the boil; put in corn and stir well; boil till the lye is thick like jelly and drain through colander and wash the corn through several waters; use a stick or spoon at first as the lye will hurt the hands, then wash with hands till the eyes are all out, and put back on stove and boil all day till the corn is soft and tender. Salt to taste. Keep in earthen dish in cool place. Season with meat fryings or butter and milk.—Mrs. May Ross, Alden, Kans.

Mush.—Three quarts water, 1 tablespoon salt, 1 quart meal; boil till stiff enough to eat with milk or let cool and fry.—Mrs. May Ross, Alden, Kans.

Corn-Bread.—Three cups meal, 1 tablespoon lard, 1 teaspoon salt, 1 teaspoon soda, 1 egg, and sour milk enough to make a thin batter. Bake in a hot oven.—Mrs. May Ross, Alden, Kans.

Apple Tapioca Pudding.—Soak 1 cup tapioca 3 or 4 hours, take 1 quart of stewed apples and mash fine, add the tapioca, 1 cup sugar, 1 teaspoon cinnamon essence; have the apples pretty juicy, as the tapioca takes it up; bake in not too hot an oven until the tapioca is clear. Eat with cream. Sisters, try it.—Mrs. A. B. Wright, Route 1, Plevna, Kans.

Rice Pudding.—One cup rice, 1 cup sugar, $\frac{1}{2}$ gallon sweet milk; stir all together in a pudding pan, grate on nutmeg and bake.—Mrs. Katie Wright, Route 1, Plevna, Kans.

Old-Fashioned Apple Butter.—Eight gallons cider boiled down to 4 gallons,

The American Boy

MAGAZINE

The Biggest, Brightest, Best Boy's Magazine in the World

8 gallons of apples after they are peeled and quartered and cooked tender in 2 gallons of weak cider, 1½ gallons sugar; put all together and boil down to 5 gallons.—Mrs. May Ros, Alden, Kans.

The Young Folks

Get to Work.

If the skies look dull to you,
Get to work;
If the atmosphere is blue,
Get to work.
Fostering your discontent
Will not pay the landlord's rent,
Will not gain for you a cent—
Get to work.

Brooding doesn't help your cause,
Get to work;
Nothing gained by picking flaws,
Get to work.
Weak are trampled by the strong?
You a victim of man's wrong?
Stand the storm, it won't be long—
Get to work.

If success shall come you must
Get to work;
There's no other way but just
Get to work.
It may yield no wealth nor fame;
Much or little, just the same,
If you perish you'll die game—
Get to work.

—Nebraska State Journal.

A Japanese Boy's Letter.

The awakening of Japan which occurred about half a century ago has been much written about in a general way of late. To fully appreciate the spirit that stirred the people of the "Land of the Rising Sun," one needs to know the motives that stirred an individual. The following is an account in "broken" English given in 1864 by one who afterwards arose to prominence in Japan. The letter was written to the man who soon after became Neesima's benefactor in America:

"I was born in the house of a prince (Itakura) in Yedo. My father (Neesima Tamiharu) was writing master of the prince's house and his writer, and my grandfather was an officer of the whole*, the prince's servant. I began to learn Japan, and China too, from six years age but at eleven years age my mind had changed quite to learn sword-exercise and riding horse. At sixteen years age my desire was deepened to learn China and cast away sword-exercise and other things. But my prince picked me up to write his daily book, although it would not have been my desire. I was obliged to go up to his office one another day, and I must teach small boys and girls, too, instead my father at home. Therefore I could not get in China school to learn China, but I read every night at home. A day my comrade lent me an atlas of United States of North America, which was written with China letters by some American minister.† I read it many times, and I was wondered so much as my brain would melted out from my head, picking out President, Building, Free School, Poorhouse, House of Correction, and machine-working, etc., and I thought that a governor of our country must be as President of the United States. And I murmured myself that, 'O Governor of Japan! why you keep down us as a dog or a pig? We are people of Japan. If you govern us you must love us as your children.' From that time I wished to learn American knowledge, but alas, I could not get any teacher to learn it. Although I would not like to learn Holland, I was obliged to learn it because many of my countrymen understood to read it. Every one another day I went to my master's house to learn it.

"Some day I had been in the prince's office and I got none to write at all. Therefore I ran out from the office and went to my master's house. By and by my prince stepped into the office, wanting to see me; but he saw nobody there, and he stayed me until I came back into. When he saw me he heated me. 'Why you run out from the office? I would not allowed you to run out from there.' After ten days I ran out from there again, but he would not know about it. But alas! in the next time he found out again I ran out from the office, and he heated me. 'Why you run out from here?' Then I answered to him that 'I wished to learn foreign

*That is, a steward, in charge of the private servants and attendants of the prince, pages, carriers, cooks, kago-bearers, etc.—an office of considerable dignity and responsibility.

†What is here called an "atlas" was a history of the United States, written by Dr. Bridgeman, of Shanghai, in China. After Dr. Bridgeman's death, his widow visited Dr. Brown, in Yokohama, and left with him a few copies of her husband's history, which were distributed by Dr. Brown. It was doubtless one of these copies which fell into Neesima's hands.

knowledge, and I hope to understand it very quickly; therefore, though I know I must stay here, reverence your law, my soul went to my master's house to learn it, and my body was obliged to go thither, too.' Then he said to me very kindly that 'you can write Japan very well, and you can earn yourself enough with it. If you do not run out from there any more I will give you more wages. With what reason will you like foreign knowledge? Perhaps it will mistake yourself.' I said: 'Why will it mistake myself? I guess every one must take some knowledge. If a man has not any knowledge I will worth him as a dog or a pig.' Then he laughed very hard about it, and said to me: 'You are a stable boy.' Besides him, my grandfather, parents, sisters, friends and neighbors, beat or laughed for me about it. But I never took care to them, and held my stableness very fast.

"After few months I got many business in the office, and I could not get out from there. Ah! it made me many musings in my head and made me some sickness, too. I would not like to see anybody, and would not desire to go and play myself, but I liked only to stay in a peaceful room. I knew it is bad sickness, therefore I went to some doctor, hoping to get some medicine. After he stay my sickness many times, he told me, 'Your sickness comes from your mind, therefore you must try to destroy your warm mind, and must take walk for healthfulness of your body, and it would be more better than many medicines.' The prince gave me many times to feed my weakness, and my father gave me some money to play myself. But I went every day to my master's house to learn Holland. I read up Holland grammar, spending many times, and I took a small book of nature, and I pleased to read it so much as I would saw that this book would be more better than doctor's medicine to my sickness. When my sickness got better, after few months, the prince picked me up again to write his daily book, and I must stay in the office every day against his order. Ah! I could not get out from there to learn Holland, but I got many times to read book at night, and I read through the book of nature at home, taking a dictionary of Japan and Holland. Alas! the study of night-time caused me weak eyes, and I was obliged to stop it, too. After ten weeks my eyes recovered entirely, and I began to read the book again; but I could not understand some reasonable accounts in it. Therefore I proposed to learn arithmetic. But I had not any times to learn it. A day I asked to the prince, 'Please get me some time to take knowledge.' Then he let me get out from there thrice a week, although it was not enough for me. I went to some arithmetical school to learn it, and understood addition, division, subtraction, multiplication, fractions, interest, etc. Then I took the hook again, and understood some reasonable accounts in it.

"Some day I went to the seaside of Yedo, hoping to see the view of the sea. I saw largest man-of-war of Dutch lying there, and it seemed to me as a castle or a battery, and I thought, too, she would be strong to fight with enemy. While I look upon her one reflection came down upon my head; that we must open navy, because the country is surrounded by water, and if foreigners fight to my country, we must fight with them at sea. But I made other reflection, too: that since foreigners trade, price of everythings got high, the country got poorer than before, because the countrymen do not understand to do trade with foreigners. Therefore we must go to foreign countries, we must know to do trade, and we must learn foreign knowledge. But the government's law neglected all my thoughts, and I cried out myself: Why government? Why not let us be freely? Why let us be as bird in a cage or a rat in a bag? Nay! we must cast away such a savage government, and we must pick out a president as the United States of America. But, alas! such things would have been out of my power.

"From that time I went to a marine school of government to learn navigation a week three. After many months I understood little algebra, little geometry, to keep log, and to take sun, to find latitude. Ah! the study of night-time caused me weak eyes again, and I could not study at all during the time of one year and a half which would not come again in my life. After my eyes got better I was obliged to go in the prince's office. That time was very hot and sickly season of Yedo. A day the sun shined very hard,

Simpson - Eddystone Black & Whites

Surprising what beautiful dresses can be made from these economical fabrics. Their fadeless color, durable material and artistic designs have given them the reputation "Prints of Quality."

Ask your dealer for Simpson-Eddystone Black & Whites.

Three generations of Simsons have made Simpson Prints.

The Eddystone Mfg Co (Sole Makers) Philadelphia

Lowell Ingrain Carpet

WHY YOU SHOULD BUY IT

Because: It has been recognized for seventy-five years as the best INGRAIN manufactured—ALL WOOL.

Because: The goods are wound on a hollow stick which constitutes a trade-mark and guarantees that you are getting a LOWELL INGRAIN.

Because: Styles and colorings are up to date, in plain shades and figured patterns; closely resembling high-grade carpeting.

Because: LOWELL INGRAINS are so woven that they can be used on both sides: a feature decidedly advantageous. No one doubts the wisdom of covering a room entirely in a rural home, making it warmer and easier taken care of.

Ask your local dealer for a LOWELL INGRAIN when looking for a new carpet. Look for the hollow stick and be satisfied with none other than a LOWELL INGRAIN.

Manufactured by BIGELOW CARPET CO., New York

and in the evening it rained very heavy. Then I felt cold and chilled myself. The next morning my head began to ache, and my body was so hot as a fire would burn within me. I could eat nothing, but drank cold water only. After two days measles raised up all over my body. When the measles got better my eyes began to spoil, and I played and spent many times very vainly. A day I visited my friend, and I found out small Holy Bible in his library that was written by some American minister with China language, and had shown only the most remarkable events of it. I lend it from him and read it at night, because I was afraid the savage country's law, which if I read the Bible, government will cross whole my family. I understood God at first, and he separated the earth from firmament, made light upon earth, made grass, trees, creatures, fowls, fishes. And he created a man in his own image, and made up a woman, cutting a man's side bone. After he made up all things of universe, he took a rest. That day we must call Sunday, or Sabbath Day. I understood that Jesus Christ was Son of Holy Ghost, and he was crossed for the sins of all the world; therefore we must call him our Savior. Then I put down the book and look around me, saying that: Who made me? My parents? No, God. Who made my table? A carpenter? No, my God. God let trees grow upon the earth, and although God let a carpenter made up my table, it indeed came from some tree. Then I must be thankful to God, I must believe him, and I must be upright against him. From that time my mind was fulfilled to read English Bible, and purposed to go to Hakodate to get English or American teacher of it. Therefore I asked of my prince and parents to go thither. But they had not allowed to me for it, and were alarmed at it. But my stableness would not destroy by their expostulations, and I kept such thoughts, praying only to God: 'Please let me reach my aim.'

"And I began to read English from some Japanese teacher. A day I walked some street of Yedo, and suddenly met a skipper of a schooner, who knew me well and loved me, too. I asked to him, 'When your vessel going?' He answered, 'She will bound to Hakodate within three days.' I told him, 'I got warm heart to go thither. If you please, let me go thither.' He said me: 'I will take you to go thither, but perhaps your prince and your parents will not allow it to you. You must first ask to them.' After two days I took up some money, little clothing, and little books, and left quite my home, not thinking that if this money was gone how I would eat, or dress myself, but only casting myself into the providence of God. In the next morning I went on board of the schooner that would bound to Hakodate. When I came to Hakodate I searched some teacher of English, but

I could not find him with many ways. Therefore, my head was quite changed to run away from the country. But one thought stayed me, that my grandfather and parents would sorrow about it, and it balanced my mind little while. But after one reflection came upon my head, that although my parents made and fed me, I belong indeed to Heavenly Father; therefore I must believe him, I must be thankful to him, and I must run into his ways. Then I began to search some vessel to get from the country.

"After many labors I got into an American vessel which would bound to Shanghai. After I came in Shanghai River, I joined to the ship Wild Rover, and had been in the China coasts with her about eight months; with the passage of four months, I come in Boston harbor by the kindness of God. When I saw first the ship's captain, H. S. Taylor. I begged to him if I get to America: 'Please let me go to school and take good education; therefore I shall work on the board as well as I can, and I will not take any wages from you,' and he promised me if I get home he will send me to a school and let me work on the board as his servant. Although he not give me any money, he bought for me any clothing, cap, shoes, and any other thing. At sea he taught me to keep log, to find out latitude and longitude. When I came here the captain let me stay on the board the while, and I had been with rough and godless men who kept the ship, and every one on the wharf frightened me. No one on the shore will relieve you, because since the war the price of everythings got high. Ah! you must go to sea again. I thought, too, I must work pretty well for my eating and dressing, and I could not get in any school before I could earn money to pay a school. When such thoughts pressed my brain I could not work very well, I could not read book very cheerfully, and only looked around myself long while as a lunatic. Every night after I went to bed I prayed to the God: 'Please do not cast me away into miserable condition. Please! let me reach my great aim.' Now I know the ship's owner, Mr. Hardy, may send me to a school, and he will pay all my expenses. When I heard first these things from my captain my eyes were fulfilled with tears, because I was very thankful to him, and I thought, too: God will not forsake me."

Neesima.

In the miracle and romance of missions not much surpasses the story of Neesima. He was born in the capital of the Empire of the Rising Sun—Tokyo, Japan, February 12, 1843. At this time a strange passion to see the Occident, especially the United States, took possession of him while reading a geography. At the same time a stray copy of the Bible in the Chinese language came into his hands. The reading of it led to his conversion. In his twenty-first year, at great personal peril, he fled from his native country. En route he sold his sword for a Chinese New Testament. The owner of the ship on which he landed in Boston Harbor, the Hon. Alpheus Hardy, befriended the young foreigner and put him in the way of the education for which he thirsted. In his twenty-sixth year he graduated with honor from Amherst College. In a most unexpected way he had the privilege of supplementing the teaching of the school by personal observations in the capitals of every nation on the continent of Europe. He was attached to the Japanese embassy, especially commissioned to study the educational systems. He returned to America and graduated from the theological seminary of Andover, Mass., in 1874. He was ordained as the first Japanese Christian evangelist and returned to his native land the same year. His most marked achievement was the founding of the great Japanese Christian University and Theological School at Kyoto. In spite of persistent opposition and great peril he succeeded. The school bears the name "Doshisha," meaning "One Endeavor." It was opened in 1875, and has 700 students. Neesima died January 23, 1890, whispering the words, "Peace! Joy! Heaven!" Governor and Buddhist priest joined Christians in his funeral procession.

A Fellow-Feeling.

"I'm not more than you," said the father.
"When I punish you, son," and
thereat
he raised his head as he sobbingly
said,
"Well, there's some consolation in
that!"—Woman's Home Companion.

The Backbone of a Mighty Nation

is good food—food for brain, food for brawn, food that is strengthening, that gives energy and courage. Without a proper appreciation of this great fundamental truth no nation can rise to greatness.

As an article of food, soda crackers are being used more and more every day, as is attested by the sale of nearly 400,000,000 packages of **Uneeda Biscuit**, which have come to be recognized as the most perfect soda cracker the world has ever known.

And so **Uneeda Biscuit** will soon be on every table at every meal, giving life, health and strength to the American people, thus in very truth becoming the backbone of the nation.

NATIONAL BISCUIT COMPANY

The Little Ones

Mud Pies.

Of all the enjoyments under the skies, There's nothing so jolly as making mud pies.

Prepare a nice shingle, or short, narrow plank, Lay it carefully down on a bright, sunny bank.

Take the freshest of earth and the cleanest of sand And mix them up thoroughly well with your hand.

Add a cupful of water, then stir with a stick. A little more water, if it seems too thick.

Now take up a lump of this beautiful dough, About just enough for a mud pie, you know.

Roll it softly around, and give it a pat. Don't have it too humpy and yet not too flat.

Lay it down on the board to bake in the sun, Then make all the others just like this one.

Then sprinkle white sand over each little cake, And leave them about fifteen minutes to bake.

And when they are done, you'll certainly say: "That's the most fun I've had for many a day."

—Unidentified.

Only an Ant-Hill.

MRS. A. D. GRAY.

"Don't—Oh, don't Helen! You'll kill them; and that's their house, mother said so." The sound of a teasing laugh came to me.

"I guess it doesn't matter," said Helen's voice. "It's only an ant-hill, and I don't suppose they know if they are killed. Sides, I don't believe its their house; ants don't have houses. My mother didn't tell me 'bout it."

The two little girls were sitting on the steps of the side porch. Helen had a tiny parasol in her hand, and she was just about to poke it into an ant-hill at the end of the steps, when Ruth caught her hand.

She looked very much relieved when she saw me at the window. Ruth never takes any pleasure or finds any amusement in hurting anything that has life, but, strange as it may seem, there are some little children who do. "If you two little girls wish me to, I will tell you something about ants," I said. "They are the funniest little things to study, and they have some habits much like people. They seem to plan and to think. They have different trades, too, as people do. There are soldier-ants, and farmer-ants, and carpenter-ants, and a lot more."

"Oh my!" said Helen in astonishment. "It's right funny that I never heard about it. P'raps my mother doesn't know—but of course my father knows—he knows about everything."

It's funny he didn't tell me." Helen was inclined to doubt my statement, but too polite to say so.

"Well, I'm going to draw my chair close to the window—like this—and while I sew, I'll tell you about—which shall it be—farmer-ants? I read it in a book called "Our Friends by the Wayside." It is a nice book for children to own, too, because it teaches them to be interested in the life and habits of the tiny, living things about them. It teaches them to be kind, too." "I'll get my father to buy me one," said Helen in an undertone.

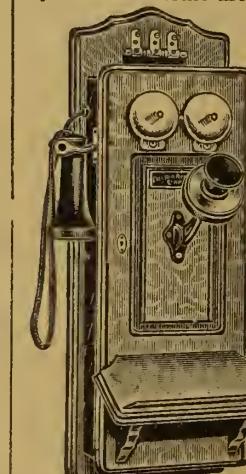

"Ants live in nests in the ground. The part that is above the ground is like a small, rounded hill, and this gives it the name ant-hill. This is their home. They are the most industrious of any living thing of which we know. The queen-ant selects the place for her home, and builds away at it, until her children are large enough to help with the work. When she has decided where to build her home, she takes off her wings, for they would be so in her way while she is digging, and she knows that she has a big job before her. She chooses very carefully the place for her home, for the earth must be of just a certain kind. Did you ever see a dog after a rabbit? Well, that's just the way an ant begins to dig. She puts her head close against the ground, and digs away very fast with her fore feet, tossing the dirt back between her hind legs. When the hole becomes too deep to use her feet alone, she uses her jaws for biting off the earth. She rolls the dirt up into hard balls, and carries them out, one by one. After a hallway two or three inches long is made, she begins on rooms. These are for the food, for eggs, and for the young. By this time, some of the baby ants have grown big enough to help, and the work goes faster. The jaws of an ant have tiny teeth. Sometimes in an old work-ant, the teeth become entirely worn off. Their feet and jaws are made for digging. The feet are covered with small, fine hairs, and this is why an ant can crawl over glass, or upside down on a wall.

The rooms in an ant-house are sometimes round, sometimes square, and are even shaped like a horseshoe. They have bedrooms, pantries, nurseries and dining-rooms. Sometimes they line the walls with a sticky kind of glue, which they make, and this makes the wall very hard and smooth. When the house is finished, the queen is done with work; but they take her wings away so she can never leave home again. If she starts to crawl away, an ant that is kept always on guard picks her right up, and carries her home. This seems a little hard. If we visit an ant-hill and have a magnifying-glass to help us to see better, we will find the halls full of working ants, running about, bringing in the food, waiting upon the queen or carrying out balls of dirt. There are always guards kept at the top of the house to give warning if any danger comes.

C The best hand on the farm is one that accomplishes the most in the shortest time. The farm telephone sends messages instantly over the miles your team would have to trot for hours. The work is half done when you have delivered the order. A dozen times a day the telephone will be useful and any one, particular call may pay for the entire cost of putting in and maintaining the line for a year.

C A veterinary surgeon may come out and save your best horse. The doctor may be had in the nick of time to save your life or some member of your family.

No man can know the exact worth of a 'phone on the farm until he uses One. We show here with the best telephone made for farm use, the "EACO," a special farm type telephone with special 5-magnet generator and 1600 ohm ringer. Will ring more bells than any other and is constructed in the best possible manner. Takes little wall space, handsome from every point of view and low in price. For all round practical use there is none better. Fitted with our X.P. Condenser, which makes it possible to call up any subscriber when receivers are off. Send today for our free book "How to Buy the Right Phone." It tells all about the "EACO" phone, how made and why you should buy it.

PATENTS.

J. A. ROSEN, PATENT ATTORNEY
418 Kansas Avenue, Topeka, Kansas.

The idle queen drops her eggs anywhere, and the little work-units pick them up carefully and take them into one of the soft, warm bedrooms.

"In cold weather they all stay at home, and if it begins to rain when they are out, how they all do scurry for the house! Doesn't this seem as though they could think and plan things? In the hottest hours of the day, they stay in and rest.

"If you will put a nest of ants into a large, glass jar, and put in some earth for them to build with, and some sugar for food, and then cover the jar with brown paper, they will make a home. When you take the paper off, you can see the rooms and hallway. You must keep the jar on a shelf out of doors, the back porch is a good place. People who know a great deal of ants and their habits, study them in this way.

"Ants have always been known to be very wonderful little insects. Even as long ago as Bible times, a very wise man said, 'Go to the ant, thou sluggard, consider her ways, and be wise.' Suppose we put a little yard of sticks around this ant-hill, so that nothing can destroy it, and then we will see what we can learn of their habits."

"Oh—lets do!" said Helen, "and when I am coming over here, I'll say, 'I must go see my ants,' and nobody will understand. But you didn't tell about the farmers and the carpenters."

"I'll save that for next time. I'm sure this is quite all you'll remember now."

"I'm glad I didn't poke my parasol into their house," said Helen, "and I'm going to tell my mother about this."

FAMOUS WOMEN.

Queen Elizabeth.

Roll Call—Names of notable people of the Elizabethan era.

I. Woman as a sovereign.

II. Establishment of the Church of England.

III. Progress and prosperity of Elizabeth's reign.

IV. Elizabethan era.

If Elizabeth had lived in our age, she would have been considered a wicked and scheming woman—heartless and cruel, but compared with other rulers who preceded her, and considering the age and the circumstances surrounding her, she was really a remarkable woman, and her accession to the throne was hailed with great rejoicing. Very little is said about her life before she became queen of England. She was the daughter of Henry VIII and Anne Boleyn, was a precocious child, and was, next to Lady Jane Grey, the best educated woman of the time.

I. As a sovereign she was counted the first among the great rulers of the world; and a study of her life and the times during her reign, considering the existing conditions and seemingly insurmountable difficulties she overcame, of her leniency and patience, convinces one of the fact. A paper discussing the policy she pursued, her administration

of justice, and her influence upon the times, would be interesting and instructive.

II. A discussion of the religious conditions in England at the time when Elizabeth ascended the throne, and the growth and development of the same, giving a brief history of the establishment of the church of England, might constitute a paper under this second topic.

III. England made great strides in civilization during the forty-five years of Elizabeth's reign. At its beginning everything was in a very crude state—agriculture, commerce, and manufactures were in their infancy. The comforts of life were wanting even by the rich. Enterprise of all kinds was restricted to narrow limits. It will be interesting to note the progress made during this period.

IV. Under this subject could be written most anything transpiring or developing during Elizabeth's sovereignty, but let that pertaining to the literature and art, and about the great thinkers and writers of the time, come under this subject. Shakespeare, Ben Jonson, Francis Bacon, Lord Burleigh, Sir Walter Raleigh and Cranmer are some of the great men of that time.

The Jewel Reading Club.

The "Mutual Improvement Club" made its demise. It did not occur to me upon my return after an absence of almost a year, that it was incumbent upon me to attempt to resuscitate it. Since then we have a new club, "The Jewel Reading Club," a nice country club with a membership of fourteen. Mrs. Dorr Blood, president; Miss Leona Shaw, vice-president; Mrs. Sherman Young, secretary; and Mrs. M. Pollard, treasurer. The club meets on Thursday afternoon of each week, the club home being with Mrs. M. Pollard as occasion demands; otherwise, the meetings are held with the members in turn. The president appoints three readers for each meeting. The Dictionary is an important part of each meeting and if there is any question about the right pronunciation, it is soon settled.

Another thing which has been of much interest is to bring words which are incorrectly pronounced, and after giving each one an opportunity to correct, the person presenting the word is expected to do so, as she is supposed to have prepared herself before giving the word. The club began its labors by reading "Little Jewel," by Clara Louise Burnham, followed by its sequel, "The Right Princess," by the same author. The next was "Dr. Jeckyl and Mr. Hyde," and last "Ben Hur." Each reading has been discussed and the interest has been something wonderful. We have found that the attendance has been regular, no one wishing to miss a meeting, lest the thread of the narrative be lost. Music is also a part of each meeting and occasionally a varied program is given.

This club is located along the boundary lines of Shawnee and Osage Counties, and is federated with "The Osage County Federation."

We wish every locality might have an interesting and helpful a club as this one is to its members.

EMMA TROUDNER.

Carbondale, Kans.

THE INTERNATIONAL SUNDAY-SCHOOL LESSON.

Copyright, 1906, Davis W. Clark, D. D.
First Quarter—Lesson XI—March 18, 1906.

The First Quarterly Review.

"The Finding of Jesus" might be taken as the general topic for all the lessons of the three months just closing. The shepherds found Him. Their very occupation led them to be reverent and contemplative. They were much in the solemn stillness of the night and in the company of the heavenly planets. These mystic star-gazers may have been in communion with heaven at the very time of the nativity. The Wise Men found Jesus. On the dark background of Herod's murderous jealousy and Jerusalem's cold indifference the moral earnestness of the Magi shines with pleasing luster. They took a thousand-mile journey to find the babe. Neither Herod's jealousy nor Jerusalem's indifference nor the mean place of the nativity daunted them. . . . The boy Jesus finds himself. Arriving in Jerusalem at the feast, it was not the prodigious mass of humanity assembled there, not the golden and marble temple, not even the solemn and speaking ceremonial—not these, but the Messianic idea and the dawning consciousness, "I am He," absorbed Jesus and made Him oblivious to time and place and human relationships. . . . John the Baptist

finds Jesus. When he was at the very zenith of his power, his congregations largest and his influence widest, unexpectedly one day Jesus stood before him asking baptism. John started back in self-deprecation, at once recognizing and acknowledging the infinite superiority of the one who stood before him. . . . The tempter found Jesus: It is indifferent whether one believes this an approach of a literal devil, or a figurative description of a moral struggle entirely subjective. It is enough to know that Jesus triumphed. It was the victory of humanity, not of deity—and so was our victory as well as His. . . . The disciples found Jesus: Their previous calls had been preliminary and progressive, but this was final. He had had a rupture with the ecclesiastical establishment and must needs organize His followers. He prefaced this last call with a thrilling pictorial miracle which significantly taught them what they must be and do. . . . Sufferers find Jesus: A miracle mercifully wrought upon a poor possessed one in the synagogue at Capernum was a silver bell whose notes had sounded in every shadowed home. In obedience to its encouraging call, when the setting sun had absolved the people from their overstrained ideas of Sabbath observance, they came to Him whose sovereign power had had such a conspicuous exemplification. Power to forgive is found in Jesus: To the paralytic, let down through the roof by the faith and persistence of his friends, Jesus' first words were indescribably comforting: "Son, be of good cheer." But there is a surprising change in the formula. It is not a rebuke to disease. It is a categorical, authoritative remission of sin. The starting words could not escape the notice of the inquisitorial coterie of Scribes and Pharisees. It was not intended they should. It was Jesus' gauntlet at their feet. They picked it up, but not in audible words of dissent. It is equally as easy to forgive as to heal, and vice versa. But that you may know that I have authority and power to do both, I will also say to this utterly powerless person, "Arise." He spoke and it was done. . . . The people find Jesus a divine teacher: The Sermon on the Mount is an inaugural. As such it takes on a dignity and importance all its own. It irradiates the fundamental principles of the kingdom of God and prescribes the character and conduct of its subjects. Jesus' ideal was the exact reverse of that popularly entertained. The people wanted an objective kingdom. He showed them only a subjective one. They wanted one of brute force; He unveiled one of meekness, unarmed with carnal weapons.

Extravagance.

Bill.—"Say, John, who is the most extravagant person you know?"

John—"That's easy. It's my wife, Sallie."

Bill—"No, it's Tom Allen. He blew in a hundred dollars this spring just for nothing."

John—"You're joking. Sure Tom never spent a cent foolishly in his life."

Bill—"Well, there he comes now and I'll leave it to you. See that horse he's driving. That's that 6-year-old mare I sold him this spring for \$250, and she was worth it; but he let her get sore shoulders and she ran right down till now you, nor me, nor no one else wouldn't offer more than \$150 for her, and if it isn't extravagant to knock a hundred dollars off the value of a mare when 25c for a box of Security Gall Cure would have saved it, then I don't know what extravagance it."

The remarkable growth of Tacoma, Washington, is well shown in the advertisement of that city and its tributary country, that will be found upon another page of this issue. The city itself has increased in population from 37,714 in 1900 to 85,000 in 1906. This great growth is caused by its having become a large manufacturing center, and by its unequalled position as a seaport.

Just at present five great transcontinental railroads are crowding into that city and its growth has become still more stimulated. The remarkably mild climate, where the grass is green and flowers bloom the year round, makes it an especially desirable place of residence, while its school facilities are of a high class. Every one who reads this should at once write to Secretary Pratt of the Tacoma Chamber of Commerce, for the beautiful descriptive books he is issuing describing Tacoma and its opportunities, and the incredible results received by its fruit- and berry-growers in the rich valleys surrounding the city.

No Complaint in Four Years.

Clarence, Mo., Jan. 10, 1906.
The Lawrence-Williams Co., Cleveland,
Ohio:

I sell Gomhault's Caustic Balsam, and lots of it, too. I do not hesitate to guarantee Caustic Balsam to do everything it is guaranteed to do, for once used, they use it altogether, and I have never heard any complaint in four years past.

M. H. SCRUTONFIELD,

Serious Business

A Living Monument.

If we were to assemble all those who have been cured of heart disease by Dr. Miles' Heart Cure, and who would to-day be in their graves had not Dr. Miles' been successful in perfecting this wonderful heart specific, they would populate a large city.

What a remarkable record—a breathing, thinking, moving monument, composed of human lives,—that for which every other earthly possession is sacrificed.

The Miles Medical Co. receive thousands of letters from these people like the following:

"I feel indebted to the Dr. Miles' Heart Cure for my life. I desire to call the attention of others suffering as I did to this remarkable remedy for the heart. For a long time I had suffered from shortness of breath after any little exertion, palpitation of the heart, and at times terrible pain in the region of the heart, so serious that I feared that would some time drop dead upon the street. One day I read one of your circulars, and immediately went to my druggist and purchased two bottles of the Heart Cure, and took it according to directions, with the result that I am entirely cured. Since then I never miss an opportunity to recommend this remedy to my friends who have heart trouble; in fact I am a traveling advertiser, for I am widely known in this locality."

J. H. BOWMAN,
Manager of Lebanon Democrat,
Nashville, Tenn.

Dr. Miles' Heart Cure is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails he will refund your money.

Miles Medical Co., Elkhart, Ind.

REAL ESTATE.

FARMS FOR RENT—Wheat farm and two dairy farms. Would rent cows to good men; also want to get 300 acres of prairie broken up at \$1.50 an acre. W. W. Cook, Russell, Kans.

You can't buy anything adjoining for less than \$5 or \$6 per acre. Will take \$1.25 per acre, balance in U. P. contract running 9 years. I need some money and will sacrifice for quick sale. If you haven't got all cash might take your note for \$800 or \$1,000 payable \$200 every six months.

I have 160 acres nice smooth land in Wichita County. Will take \$650 for it.

160 acres No. 1 farm near Oakley, Logan County, 130 acres in cultivation, at \$10.50 per acre—these are bargains. Address J. W. Ferguson, R. F. D. 1, Topeka, Kans.

SEVEN miles from Emporia we have for sale at \$50 per acre 125 acres of creek bottom land with 2 wells, 2 windmills for stock, well and cistern at the house. House is two story, frame, shingle roof; 6 rooms and summer kitchen. Barn 32 by 40, large tool house, cattle sheds about 20 by 120. Stone wall along the entire north side. Large granary, Fairbanks scale, good timber, plenty for fuel; 10 acres of growing alfalfa; 20 acres of pasture, good apple and pear orchard. One mile to school and 3 miles to the station. Telephone in the house—can talk to 2,800 people for \$6 per year. Everything here is in good repair; orchards in their prime. Hurley & Jennings, Emporia, Kans.

CASH FOR YOUR FARM, HOME, BUSINESS OR OTHER PROPERTY. We can sell it for you, no matter where it is or what it is worth. If you desire a quick sale send us description and price. If you want to buy any kind of property anywhere send for our monthly. It is free and contains a large list of desirable properties in all parts of the country. CHARLES A. WILSON, REAL ESTATE DEALER, 415 Kansas Avenue, Topeka, Kans.

The Master's Address.

(Continued from page 232.)

source. It is a matter of the greatest importance to the advancement of agriculture and the welfare of all the people of the country, that a mutual understanding of this matter be fully established, and that the great influence of those liberally endowed and splendidly equipped institutions, established in every State and Territory, be exerted in this direction. The bulletins of the experiment stations carry the valuable results of costly and important experiments to a vast number of students in farmhouses, and they should be carefully studied and the information applied to farm operations.

NATURE STUDIES IN PUBLIC SCHOOLS.

The general trend towards the use practical, in place of simply theoretical, studies for mental development in educational methods, renders it an opportune time to urge the introduction of the principles of agriculture, or in other words, nature studies in the curriculum of public schools. However desirable may be the form of education that contributes to culture and refinement, unless such training is accompanied by knowledge of nature's processes, the possessor of such education may find himself able to shine in society, but be unable to make the best use of his faculties, and thereby contribute useful service to the community as a citizen. The general adoption of this feature of education depends more upon a public sentiment favorable to it than upon forced legislation, and we recommend that the subject be given frequent and earnest consideration by the subordinate, Pomona and State Granges, as well as in the deliberations of this body.

COOPERATIVE BUSINESS.

In addition to cooperation in its broader sense, as applied to church, school, grange, and citizenship, in varied relations to town, county, State and Nation, there is a necessity for business cooperation. I said in my annual address, one and two years ago:

Individual members may form cooperative or stock associations, such as mutual insurance, fire and life companies, savings banks, trust or loan associations, building and loan companies, elevator associations, cold storage plants, warehouses, and may establish feed stations, stock exchange and sale yards, butter, cheese, and condensed-milk factories, and such other business arrangements as may be found necessary to facilitate the speedy and economical sale or purchase of the products and supplies of the farm. All business associations should be established on sound business principle, and managed by honest men with large experience and qualifications, and all transactions should be conducted on the cash system. Under no circumstances should the credit system be encouraged. Neither the Order of the Patrons of Husbandry, subordinate, Pomona, State or National Granges should, as an organization, be involved in any of these business enterprises."

These cooperative enterprises, when established and conducted upon sound business principles by capable and honest men, afford farmers an opportunity to escape contributing to such extortions as have recently been uncovered in some of the great financial institutions of the country. Such extravagance as has been brought to light in the management of life-insurance matters, involving the financial interests of a vast number of policy holders, is a convincing argument in favor of mutual insurance.

NATIONAL AID FOR HIGHWAYS.

The policy of national aid for the improvement of transportation facilities is as old as the government itself, and as fully recognized by Congress as any national policy. Great railroad companies have been granted aid in the form of land and money to construct railroads and improve transportation facilities across the continent thereby; millions of the people's money have been appropriated to dredge rivers and harbors, and still greater sums of money are to be expended in the construction of the Isthmian Canal. This money is expended not to open avenues of travel, but to improve those already in existence by allowing transportation over the same routes by improved means of conveyance made necessary by the greater volume of traffic. This is an exact contrast with the conditions existing in regard to our main highways. The increased demands upon these highways for the transportation of commodities render them inadequate in their present condition, and it is beyond the resources of local property owners to properly improve them. Increased traffic brings no increased revenues, as in the case of transportation

REAL ESTATE.

FOR SALE—A good farm of 320 acres in Anderson County, Kansas, main line Missouri Pacific Railway, R. F. D., near to school and church. American community, good improvements; \$22 per acre. A bargain. Address O. J. Prantice, 156 Wabash Avenue, Chicago.

100,000 ACRES

of the finest irrigated land in the finest section of country on the face of the earth

at from \$18. to \$25. an Acre

on easy terms with perpetual water rights guaranteed forever by the Canadian Pacific Railway at only 50¢ Per Acre Per Annum.

Do You Know ?

of an irrigated proposition that will equal this and actually the finest land lying "out of doors," Deep, Black Loam Soil with Clay Sub-soil; produces 30 to 55 bushels hard wheat to the acre, magnificent crops of alfalfa and sugar beets. These lands are along the main line of the Canadian Pacific Ry. at Gleichen. Remember these lands are not in a wilderness, but within easy access to good markets, schools and churches. We have some attached areas of non-irrigable land which are covered with a rich growth of grass and are perfect for grazing lands, which we will sell in conjunction with their irrigated land making an ideal combination for farming and stock raising.

THERE ARE BUT A FEW of these combination farms. It would be well for you to make selection at once. For maps, descriptions and certificate for low railway rates, address

Canadian Pacific Irrigation

Colonization Co. Ltd.

CALGARY, ALBERTA, CANADA

lines owned by individuals, or waterways used by public carriers. The farmers of the United States are practically unanimous in their request for National aid in the improvement of highways over which all of the people travel free, as has been accorded for the improvement of the great railroads and waterways over which people who travel are required to contribute to private enterprises. It is as important to improve a thousand miles of road over which a hundred thousand people travel daily without contributing to its maintenance, as to improve ten miles of waterways over which people and commodities are transported only by contributing to the profits of private transportation companies. This matter will receive earnest consideration at this session of the National Grange.

RURAL MAIL DELIVERY.

A message to this organization, representing the farmers of the country, would be incomplete without reference to rural mail delivery, which is one of our grandest achievements. We have seen this branch of the postal service expand from an experiment of doubtful success to a comprehensive system, reaching nearly one-half the rural population, largely through the work and influence of the grange. Its success in breaking up the isolation of farm life and in advancing farm values has been phenomenal, and entitles the Grange to refer to it as one of its greatest victories. Over 30,000 rural mail carriers serve 15,000,000 people better than the people served themselves, at a fraction of the cost, and enable them to receive their daily mail without coming in contact with demoralizing influences that often lurk in centers of population. Rural mail delivery is a promoter of intelligence as well as a great financial benefit to the farmers of the country. We recommend its still further extension and development.

THE PARCELS POST.

This organization has repeatedly endorsed the parcels post as an appropriate sequel to rural mail delivery, and we have only to refer to its success in all the leading European countries as evidence of its practicability. The Postoffice Department of the United States Government has recommended its establishment upon rural routes, which probably would meet with but little opposition from sources from which opposition will come on the establishment of a general parcel post, for it would to that extent interfere with the profits of no corporations doing business as public carriers. The parcels post would be of special advantage to farmers as they are generally unable to have packages delivered to them by express companies. It seems incredible that the financial interests of a comparatively small number of people engaged in the carrier service, should long prevail against the interests of 80,000,000 people who would derive benefit from the parcels post, especially in view of the success it has achieved in almost every other civilized country in the world. It only requires an aroused public sentiment upon its probable advantages to our people, to cause our National lawmakers to give serious consideration to this matter, and we urge a vigorous campaign for securing it.

INFLUENCE ON LEGISLATION.

Along the line of legislation the influence of the Grange has been exerted for many years, moulding public opinion and crystallizing it into laws for the benefit of agriculture, the farmers, and people in general. Among the laws already secured might be cited:

The Interstate commerce law establishing an interstate commission to regulate transportation on a basis of equality between shippers and localities, to secure fairness between shippers and common carriers, and to prevent discrimination between individuals and localities.

The securing and continuous existence of free rural delivery.

The act of February 19, 1903, enlarging the powers of the Interstate Commerce Commission, and of the courts, to prevent secret rebates.

The so-called Sherman "anti-trust" law of 1890, and the various amendments since that time enacted.

The act of February, 1903, creating the Department of Commerce, having authority to secure full information regarding the organization and operation of corporations engaged in interstate commerce.

The Hatch act for the establishing of State experimental stations.

The separation of the agricultural schools from the classical colleges, directing that additional appropriations for agricultural colleges be confined to instruction in agriculture and mechanic arts.

The Grout bill, protecting the dairy

interests against the fraudulent selling of colored oleomargarine as butter.

The act of 1902 to prevent the false branding of food-products, protecting farmers and other consumers from fraudulent imitations.

NEGATIVE INFLUENCE OF THE GRANGE POTENT.

Not only in securing good laws was Grange influence potent, but in preventing the enactment of laws that would have been detrimental to public welfare. The preventing of the extension of many patents beyond a reasonable limit has saved millions of dollars to the people in the lowering of the prices of articles in common use, the patents of which would have been extended.

It was instrumental in the defeat of the ship subsidy bill, and in preventing the ratification of reciprocity treaties, that were manifestly unfair to the American farmer.

In the reports of the United States Circuit Courts will be found the record of Grange influence in defeating the pretended claims for royalties on slide gates and driven wells. In the reports of the Supreme Court of the United States will be found that important decision establishing and affirming the right of legislative supervision and control by Congress in Interstate commerce and legislative supervision of all corporations.

Substantially, every State in the Union has evidence of Grange thought and influence in equitable laws passed

(Continued on page 204.)

THE KANSAS FARMER

Stand Up for Osborne County

In the great Solomon River Valley, the richest section of the Northwest. The best all-purpose county in the State. The home of Alfalfa, the king of all grasses, where land values are always increasing, where prices now are very low. The most productive soil the sun ever shone upon, ideal climate, abundance of pure water and timber. Prices \$10, \$15, \$20, \$25 and \$35 per acre. These prices will double inside of two years. Write me for full particulars and list of farms.

A. L. BROWN, (the man who sells Osborne County lands),

Osborne, Kans.

We do not deal in extreme Western lands, hot air, hot winds, sand, sage brush and blue sky, but handle Osborne County lands, exclusively. That's what makes our business grow.

Horticulture

The Gentle Art of Gardening. A. T. DANIELS, TOPEKA, KANS., BEFORE THE WEST SIDE FORESTRY CLUB.

It is a very interesting thing to study the growth and development of a city or a State or a Nation; and it is, or should be, a much more interesting thing to be able to take some part in promoting that growth in such a way that it shall be towards the attainment of the best results. Such a part in this work for the betterment and refinement of this community is the work of the West Side Forestry Club.

I take it that the aims of the Forestry Club are not so much to teach the rules and practice of the art of forestry, as to create and help to grow in this community a knowledge of and an interest in trees and shrubs and things that grow out of doors.

I am in full sympathy with the work of this club, and I am sure that the example and influence of such an organization as this can not fail to be of great value in building up our city to be a beautiful and wholesome place in which to live.

In our own city, full of fine public buildings and beautiful private residences with artistic furnishings and evidences of refinement, taste, and culture, we seem only just to be coming into that period of our civilization which finds one expression of its refined taste in the symmetrical, appropriate, and pleasant surroundings of a beautiful building. As Lord Bacon said in his quaint "Garden Essay," "As ages grow in civility and elegance, men come to build well sooner than to garden finely, as if gardening were the greater perfection."

I have no doubt that in the work which you have done among your friends and neighbors, to enlist their sympathy and cooperation in beautifying their parks and lawns and in planting trees and shrubs, you have found that most people are also in sympathy with your work. Every one enjoys the shade or fruit of a tree and the fragrance and beauty of a flower, even if they have never tasted the joys of planting or caring for a garden. The work that may be done by those who have the true gardener's spirit is to imbue their neighbors and friends with an enthusiasm that shall lead them to turn some attention, time, and effort to planting and cultivating something to grow out of the ground; not only to stimulate a love for the beautiful things of nature, but to a practical realization of the pleasure that comes from a more intimate knowledge of and acquaintance with out-door life.

INFLUENCE OF GARDENING.

The love of nature, the reverence for the forest and the groves that were God's first temples, and the appreciation of the beauty and usefulness of a stately tree or a graceful flower, are all attributes of character that are worthy of cultivation in every person. The influences of a taste for things out of doors are gentle and refining and inculcate a quiet, friendly, charitable spirit.

Gardening is a generous art and prompts unselfishness. A good gardener is a good neighbor and a good neighbor is a good citizen. Gardens have been associated with the finer and tenderer feelings of our natures ever since the days of Adam; and in all the ages, every period of peace and enlightenment has been characterized by the planting and care of gardens—as if it were natural for us to return to the original occupation of man.

In the bustle and hurry of modern life much of our natural inclination is repressed, but there is still in the hearts of most of us a tender feeling for a garden and what grows therein, and a hope that some day we may really have a garden and participate in the joy that comes from digging in the ground and from watching the unfolding of leaf and bud and flower, and the ripening of fruit.

Almost all civilized people are born with a love for flowers and trees and a garden. A garden, even though it be small, is closely associated with our idea of home; and the people who have been foremost in pioneer life in these United States, those whose work has been of permanent value in laying the foundations of good government, have been people who have recognized and appreciated the value of the home and its influence for good in the community, and whether they were Puritans in New England, Cavaliers in the sunny South, or Dutch along the Mohawk or the Hudson; or in later years, if they

were of those who settled in the forests of the Central States or on the Western prairies, they were people who came from homes whose influences have been and still are mighty forces for good in making new homes in new lands.

PIONEER GARDENING.

The work of these pioneers, however, was hard. It was to subdue the land and to prepare the soil to produce a living; towns and roads were to be built; schools and churches must be established; and all the necessities and comforts of life provided for. One of the first things to be done was to plant a garden, and the garden was a prominent and essential feature of the new home. Not only for its welcome addition to the daily fare, but the garden furnished almost the only means of recreation and decoration. Plants and flower-seeds were often brought from the old home with a few roots or cuttings or scions from a favorite tree or shrub, so that their first fruits and flowers helped to keep fresh the recollection of the old home.

A home implies a family, and a family implies something besides the daily work, the daily eating and sleeping. Where there is a family, there is always something necessary as a diversion or recreation to vary the monotony of the daily toil and the routine of living, and to make the home attractive; something that helps to keep all the members of the family interested; something the memory of which will last long after the toil and hardship of daily work are forgotten.

In those earlier days, too, when it was a hardship to travel, people were kept at home, and were compelled by the conditions under which they lived to find their recreation and diversion there. Thus it was that the garden came to be very closely associated with home life, and that we, the descendants of those people, have inherited a love for the trees and the grass and the flowers.

SOME NOTED GARDENS.

Some of the gardens of those early days were quite extensive and elaborate, planted with many trees and shrubs imported from English nurseries, strangely overlooking many of our native trees much better suited to their purpose. One of the first, planted largely with native trees and plants, was that established about two hundred years ago by John Bartram on the banks of the Susquehanna in Philadelphia. There were no express companies nor rural deliveries in those days, and John Bartram collected his specimens from the forests and mountains and swamps from the Alleghanies to the coast and from New York to the Dismal Swamps and even to Florida; and when we know that all these journeys were made on foot or horseback, carrying the trees and plants, we can know that he was such a lover of the trees that it is indeed worthy of his memory that the city of Philadelphia should do as it has done—set apart his garden forever as a public park.

GEORGE WASHINGTON'S GARDEN.

Probably the most widely celebrated of the gardens of years ago is that which was planted at Mt. Vernon by George Washington, and which is still preserved much as he left it, and is one of the most interesting features of that historic spot. There are here many fine specimens of trees of different species. Especially attractive are the formal beds of old-fashioned flowers, bordered with low hedges of box in a style much used in those days.

There are many gardens in the older sections of our country, that are still preserved with a fine reverence for their many charms and old associations. A very interesting book on the old-fashioned flowers and flower lore of these old gardens is by Mrs. Alice Morse Earle, entitled "Old Time Gardens."

At the present time the wholesome lesson of decorative gardening are appreciated more than ever before, not only by individuals on their home grounds, but by municipalities in public parks and streets, and by corporations and companies who know the cash value as well as the aesthetic importance of improved surroundings.

Railroad yards and grounds are adorned with plants, shrubs, beds of flowers and smooth lawns. The demand for plants has been greater than the supply, and the inquiries for more information on garden topics all indicate the popular taste. Henry Ward Beecher said thirty years ago, that it is a sign of health and wisdom when men love pleasures and enjoyments that do not rush and roar, but distill as the dew.

Of public gardens or parks the one best known is probably Central Park of New York. Although some planting

SEED CORN

There are many points to be considered in selecting seed corn; some of the most important are outlined in the above cuts; namely, well filled out at butt end with small to medium sized shank; the tip of ear well capped or covered over with fair sized grains; the kernels should be wedge shaped from cap to where it rounds off at point or germ end, and the rows should be close together but still not so tight as to smother the germ and cause mould. The grain must be deep and set on a small cob which is of such texture that it will dry out easily and quickly. These points are all brought the nearest to perfection in the new

Order quick and be sure of this grand offer—only 10 cents. CHARLESTOWN NURSERY, CHARLESTOWN, MASS.

was done in New York about the year 1800, when the city was scarcely larger than Topeka. It may be a surprise to know that it is less than 60 years since work on Central Park was commenced; but we need not be surprised to know that its inception was largely due to that poet of nature, William Cullen Bryant, whose home and garden at Roslyn, Long Island, were among the most beautiful in America.

Shaw's garden at St. Louis is not only the most famous garden in the West, but is one of the most complete collections of trees, shrubs, and plants in America. It has been for many years the Mecca to which all good gardeners have hoped to make a pilgrimage. Here are found almost every tree, shrub and plant that can be made to grow. They are grown in a natural arrangement with sufficient plan to make access convenient, and with sufficient formality to make an orderly and artistic display. All the plants are plainly labeled so that those who wish to study them may do so intelligently.

Any collection of trees or plants is to most people much more interesting and surely more instructive if plainly and carefully labeled.

The Arnold Arboretum near Boston and the new Bronx Park and Arboretum near New York will undoubtedly be the leading public gardens of the East in a few years, as the Golden Gate Park of San Francisco is of the West.

Mr. Downing, one of the first and most charming writers on gardening in the United States, said that a cultivation of taste for rural embellishment could be brought about by individual effort, by the direct work of the nurseryman and by the horticultural societies, and of course, if he were saying it now, he would have included the Forestry Club.

Gardening was defined by Downing as "refined nature assisted by man through a taste for that which is orderly, symmetrical and harmonious in form and color."

MODELS.

A garden may be planted in some informal plan without having the natural disorder of the jungle; the best examples of artistic gardening in this country have little of the formal or mechanical arrangement in laying out and planting beds and walks, that is seen in some of the pictures of French and Italian gardens. It is likely that in America the type of garden that will be most popular and satisfactory, is the English rather than the more formal and expensive styles of the Italian and French.

The English idea of a garden is one of enjoyment and not of formal and expensive show; a garden where one may rest or walk and pluck a flower, where all is quiet and harmonious without extravagance, display or undue expense; a garden, the plan, planting, and management of which shall be liberal in proportion to the purse of the owner, and his ability to care for it. The size of the garden would of course be limited somewhat by the cost of planting and maintenance. Lord Bacon's model garden was to contain thirty acres and, indeed, with all the desirable trees and shrubs and flowers that one would like to have, thirty acres would be none too large if one were not obliged to count the cost.

For the many small or less pretentious residences on small plots of ground which comprise a great majority of Topeka homes, the general advice that may be offered is that the parks and lawns near the house be well hedged and kept in grass, with a few trees not too near the house for shade or ornament. There may be space for a few shrubs or beds of flowers at the side, and especially over the porch a Prairie Queen or Crimson Rambler rose or a Clematis paniculata; and for a rear trellis or screen, a grapevine, a hopvine, or a honeysuckle is a luxuriant and rapid grower. A portion of the rear yard should be given to perennials and annuals for cutting.

If one really enjoys these things, he will plan for them, and the results that come from cultivation of even a small place, will be very gratifying.

The real pleasure that comes to the true gardener is, fortunately, not measured by the size of his garden. One end or a corner of a twenty-five foot lot may be made to produce a wonderful succession of flowers and many a dish of fresh and tender vegetables for the table. Even with no space at all out of doors, a recreation that lasts all the year round, with changes and surprises each week, comes to many a shut-in person from the cultivation and care of a window garden of house plants.

In the smaller towns where the doorways are not cramped for space, I have

been growing evergreens and forest trees for 30 years, in ways with one idea—trees that satisfy. When you buy Hill's trees you get honest value—highest quality. My catalogue is my salesman; it's free, contains 48 pages illustrated with beautiful pictures; descriptions of all kinds of nursery stock for all purposes—hedges, windbreaks and screens. Also fruit trees, shrubs and vines. No best bargains ever offered—\$1.00 to \$100 per 100 Proprietary. Everything first-class, guaranteed exactly as represented. Write for catalog today.

The Poultry Yard

Roup.

EDITOR KANSAS FARMER:—J. E. Harbaugh states in the KANSAS FARMER of February 8, that his turkeys are affected with swelling in the head. I have learned by reading agricultural papers that this disease is called roup. My remedy is a success on chickens, and certainly will not fail on turkeys. Take a sharp knife and cut right into the swelling and take out the lump of matter found in a sack next to the eye-ball. If there is any substance formed back in the roof of the mouth, closing the holes of the nose, cut it off with the knife. The nose may be closed on the outside. I never apply anything after the operation. One application of carbolated ointment may be good. I have seen chicken's eyeballs pushed out by the enlargement of the lump. This is a sure remedy and easily performed. BEN HAMPTON.

Poultry Notes.

The hatching season is now on and complaints will soon be made that the eggs are infertile and will not hatch. One great cause of the infertility of eggs in the early season is that the hens are too fat, but after they lose some of their flesh by laying, the eggs will become fertile. The remedy is not to feed so highly but make the hens scratch for their feed.

We are of the opinion that in feeding young chicks the dry-food system is much better than the old-time, sloppy-food system. For the first two weeks feed pin-head oatmeal, millet and cracked wheat. After that time, whole wheat and Kafir-corn with cracked corn given occasionally, will make them thrive. See that the chicks always have plenty of grit or oyster-shells with occasionally some meat-scrap. Pure water should always be provided for them.

Fowls are quite likely to contract disease in the spring by allowing them to gorge themselves on grass and green plants, after having been closely confined all winter. They should be allowed to forage in early spring by remaining outside only a short time at first, which can be gradually increased as they become accustomed to it. At first they should run just a few moments before dark, giving them their liberty, turning them out a little earlier each evening. Internal fever, diarrhea, and sometimes chicken cholera are induced by allowing fowls to eat too much green food at one time in spring, before they have gradually become accustomed to it.

How to Use an Incubator.

We reprint the following from the Successful Poultry Journal, from the pen of Milton O. Adams, Hiawatha, Kansas:

The successful manipulation of an incubator is no difficult task. Any one with common sense can operate one; it's just the same as running any other machine, minus the manual labor, and an abundance of scientific knowledge. Incubators as built to-day, are so nearly automatic in operation, that a watchful eye, attentive to minor details, will insure success. I take it for granted that you have hatchable eggs.

While speaking of the minor details of incubator operation, perhaps it would be well for us to go over the ground together, and enumerate them. There are several little things, seemingly, that close observation brings to our attention. To begin with, there is the lamp. Incubator lamps are simple, common, every-day house lamps, of the best sort, though; there is nothing mysterious about them, and they are much safer than other coal-oil lamps. Be careful, though, to see that only the best quality of oil is used, and that the wick is regularly trimmed, daily. Cheap oil is the foundation of most burner troubles. Good oil goes further, burns more steadily, and throws off less obnoxious gas. Wicks cost but little, so use a new one each hatch, and, always keep the mica clean, so that you have no difficulty in seeing the flame. It's almost needless to remind you of the necessity of keeping the heater free of soot, should poor oil cause it to collect.

Incubator regulators are just about perfection, relieving the operator of a great deal of worry and care. But they must be properly adjusted in order to perform the duty they were designed for. A good thermostat will maintain an even temperature with scientific

Mark Them

If you will separate the young chicks, and to one lot feed Dr. Hess Poultry Pan-a-ce-a regularly as directed, you will find that they will make a remarkable gain in growth over a similar number that do not receive the Pan-a-ce-a, and besides the Pan-a-ce-a will prevent loss from disease. Dr. Hess Poultry Pan-a-ce-a cures gapes, choicera, roup, indigestion, leg weakness and all poultry diseases due to digestive troubles or infection. Poultry Pan-a-ce-a positively destroys the germs of disease, besides increasing the digestive powers so that the maximum amount of the food is converted into bone, muscle, feathers, eggs.

DR. HESS Poultry PAN-A-CE-A

is the prescription of Dr. Hess (M. D., D. V. S.) and makes the young grow fast, healthy and strong. It has the endorsement of leading poultry associations in the United States and Canada. Costs but a penny a day for about 30 fowls and is sold on a written guarantee. Destroy poultry lice by sprinkling your hens and nests with Instant Louse Killer; it is also a reliable disinfectant and deodorizer.

13 lbs. 25c., mail or express, 40c.
5 lbs. 60c.
12 lbs. \$1.25.
25 lbs. \$2.50.

"Proper Care and Feeding of Chicks," 100. Six postpaid paper one year, 10c. Royal Incubator Co., Dewart 66, Des Moines, Ia.

There is nothing in the world like it. It contains 224 large pages, handsomely illustrated. A number of most beautiful colored plates of fowls true to life. It tells all about kinds of Thoroughbred Fowls and their life-habits, illustrations and views of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about

Incubators and Brooders.

It gives full instructions for operating all kinds of incubators. This chapter is marvelously complete and worth dollars to anyone using an incubator. It gives descriptions and prices of incubators, brooders and all kinds of poultry supplies. In fact, it is an encyclopedic of chickendom and will be mailed to anyone on receipt of only 10 cents. Your money returned if not pleased.

S. B. SHOEMAKER, Des Moines, Iowa.

precision when properly set. Too many operators, beginners especially, are in such a hurry to get the incubator at work, that sufficient time is not given to adjusting the regulator. It is best to see that everything works nicely, and that the machine will hold the proper temperature, and to run it without eggs, for a few days, than to start the machine setting, before you can keep a uniform heat. Be sure that the connections are properly fitted, and that the lever is carefully adjusted according to directions accompanying the machine. The damper must fit down evenly over the flue, or bend the connection so that it does. When you have everything about the regulator working smoothly, turn your attention to the thermometer, and locate it in your machine as per your instructions.

It is understood that you have picked out a desirable location for the machine to begin with. As to whether your machine should be operated in a cellar, or above ground, follow the advice of the maker of your machine, but all times look well to the ventilation of the room. Foul air is conducted right into the machine, and can not help but work to the detriment of the forthcoming hatch.

While there is a difference of opinion among incubator manufacturers as to the wisdom of testing the eggs, rest assured that it can do no harm. Beginners, especially, can learn a great deal relative to the theory of incubation by studying the embryo chick, and its wonderful development. It is not my purpose to advise anything contrary to the directions of the man who made your machine, but there are so many little, seemingly unimportant details, that are too often slighted, to the detriment of the hatch, that it is well to keep ever fresh in your memory the absolute necessity of attention to details.

While incubators hatch as large a per cent of the eggs as the average hen does, yet a machine not coming quite up to this average is even more profitable than hatching with hens. Many times it requires as much time and care to attend to a single hen covering but thirteen eggs, as it does to properly operate an incubator containing from fifty to four hundred. Figuring your time, and feed bills, when using hens, against the oil and time for operating an incubator, shows a handsome saving favorable to the incubator.

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of the Kansas Farmer. Kindly give the age, color, and sex of the animals, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should give the inquirer's postoffice, should he signed with full name and should he addressed to the Veterinary Department of the Kansas Farmer, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter answered in the Kansas Farmer, an immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across top of letter: "To be answered in Kansas Farmer."

Bog Spavin and Thoroughpin.—My 2-year-old mare colt has what I think is a bog spavin and thoroughpin; it is a soft hunch at the hock joint on both sides and on the front. It has had it thirteen months, but does not seem lame from it. I used a spavin cure on it at first, but it did not seem to be reduced any. Is there anything to remove the bunch? If not, will it make her lame to work her? A. F. J.

Morganville, Kan.

Answer.—A stimulating liniment containing considerable iodine in the form of the tincture, applied to your colt's bog spavin and rubbed in thoroughly will do more to reduce the enlargement than anything else I can recommend. The following makes a very good liniment: Sulphuric ether, 6 ounces; oil of turpentine, 3 ounces; tincture of iodine, 4 ounces; compound soap liniment, 1 pint. Shake well before using; apply once daily until sore, then withhold for a few days and begin again.

Palpus Worm.—I have two mares that have been sick all winter. I have tried several kinds of medicine that have done no good. They get stupid but do not wobble. Some say it is malarial fever. Can you send me a bulletin giving remedy for same? Weir, Kan.

Answer.—We are sending you a press bulletin which we think will describe the condition of your animal. If it

DON'T SEND EAST for your Single Comb Brown Leghorns. In four shows this season I have won 15 out of 19 blue ribbons competed for and in three of these shows have had highest scoring bird in the show. Scores as high as 35½ by Owen and Atherton and 94½ by Rhodes. Stock for sale. Eggs, \$1 for 13; \$5 for 100.

CHAS. C. SMITH, Manhattan, Kansas.

BIG PROFITS in Farm Poultry

fails to meet the requirements in your case, kindly write us again and we will give you additional information if possible.

The Palisade Worm.—Please give me some information about long, wire-like worms found on the outside of the intestines of a horse that died with what was supposed to be blind staggers. I could find nothing wrong with the horse, except for these long worms, and bots in the stomach; should judge that there were about 1,000 bots. Will bots cause the stomach to stop acting? The horse was sick only 9 hours, and reared and fought until he fell, and was held down, and then sweat until he died. I would like to know if the worms were the cause of death? Many horses have died in this neighborhood with this disease. D. B. R.

Seward, Kan.

Answer.—We are mailing you a press bulletin on the palisade worm, that was evidently the cause of the death of your horse. Bots oftentimes causes stopping of the stomach; whether it caused the trouble with your animal or not I am unable to state.

Swelling on Hock Joint.—My 3-year-old filly got kicked or, hock joint February 8. I have been using a liniment of vinegar, turpentine, and lard, but this does not relieve the swelling. She is not lame. What can I do to remove the swelling? I also have a black mare that is always rubbing when in the stable or lot. I can find no lice, but there is a scab in the hair next to the skin, and she is falling off in flesh.

Holton, Kan. O. B.

Answer.—We would advise using lime and sulfur dip in the proportions of 8 pounds of lime and 24 of sulfur to 100 gallons of water. Put the lime and sulfur together and add sufficient water to get as much of the sulfur into solution as possible; allow it to stand for 48 hours, dip off the surface liquid and add sufficient water to make 100 gallons. The dip should be applied as hot as the animal can stand. It will not be necessary to make up this entire formula but use it in the proportion indicated.

Pallus Worm.—I have two mares that have been sick all winter. I have tried several kinds of medicine that have done no good. They get stupid but do not wobble. Some say it is malarial fever. Can you send me a bulletin giving remedy for same?

Weir, Kan. F. N. D.

Answer.—We are sending you a press bulletin which we think will describe the condition of your animal. If it

POULTRY FEEDING AND FATTENING

A handbook for poultry keepers on the standard and improved methods of feeding and marketing all kinds of poultry.

The subject of feeding and fattening poultry is prepared largely from the side of the best practice and experience here and abroad, although the underlying science of feeding is explained as fully as needful. The subject covers all branches, including chickens, broilers, capons, turkeys and waterfowl; how to feed under various conditions and for different purposes. The whole subject of capons and caponizing is treated in detail. A great mass of practical information and experience not readily obtainable elsewhere is given, with full and explicit directions for fattening and preparing for market. The broad scope of the book is shown in the following

TABLE OF CONTENTS

Thrifty Growth, Expert Chicken Feeding, Broiler Raising, Nutrition for Layers, Special Foods, To Finish and Dress Capons, The Art of Poultry Fattening, Lessons from Foreign Experts, American Fattening Methods, At Killing Time, Preparing for Market, Marketing Turkeys and Waterfowl, Finish and Shaping.

Profusely illustrated, 160 pages, 5x7-1/2 inches, cloth. Price 50 cents postpaid.

Dairy Interests

Making Skim-Milk Paint.

Of all the compounds that I have used, skim-milk is the cheapest and best. About twice a year I see the receipt for government whitewash: I have found it expensive, not much better than ordinary whitewash, very dazzling to the eye when new, and easily washed off. Oil and lead are too expensive for old and unplaned buildings—as it is a good deal like pouring water into a rat-hole to try to fill the cracks with expensive paint. Paints last but a few years at the most for some reason unknown to me, unless it is that they are made to sell only, and the quicker they fade or peel off, the more can be sold.

The following mixture is so cheap and so quickly put on that one can afford to paint as often as needed; but from my experience, if properly made and put on, it is more durable than the others. It is made of skim-milk, (either sweet or sour) water lime, or a low grade of cement, and colored with yellow or red. There is no particular formula, and you just put some cement into the milk and a little of the color, and stir. The lime will settle to the bottom, and the mixture should be kept well stirred while using, and no more made than can be applied before leaving it for the day.

I took a butter-tub and mixed milk and color well; then dipped out three quarts and put in some lime till it was a thin paint. The cement or water lime varies, and I cannot give the exact quantity. It should be thin, so as to spread easily and enter the surface. It should be well rubbed, and not enough left on to form a thick coat. It works best on rough surfaces, as rather more can be made to stay on and the wood shows through less than on the planed boards.

The only danger is of getting it too thick and leaving on so much that later a sudden jar will cause it to flake loose and fall from its own weight. To get the best effect, there need not be enough on to allow one to split it off with a knife without taking the wood with it. We apply with a four-inch brush, or on old buildings with a scrub broom, and do a "wholesale job." At a short distance, after five years' wear, it has all the appearance of the best paint—C. E. Chapman, in 'Country Gentleman.'

How You Should Dairy.

Address Delivered at Various Places on the Occasion of the Blue Valley Creamery Company Dairy Special Over the Chicago, Great Western Railway, August 2, 3, and 4, 1905, by R. M. Washburn, State Dairy Commissioner of Missouri, Columbia, Mo.

When starting into any new or partly new work, or when in a work and realizing that others with no better natural conditions than we have, are making a more decided success than we are, we should go to these successful neighbors, either in person or through paper and books, and learn their ways of doing.

There are three factors which work for success in the dairy work: The man, the cow, and the market.

1. The man factor comes first because if he will, he can influence the others. First of all, he should be intellectually equipped, or, in other words, he must have the mental tools for doing the work. We may have been raised on the farm and among stock, and yet not know the business as we need to know it for success. Did you ever stop to think that all

we know, all the knowledge of the human family is the experience of innumerable individuals, and that to you and me is given but a tiny part of this vast amount of experience? Our neighbor's experience is just as sound and to him as valuable as ours is to us. Let us, then, not scorn his words of warning or advice, even if we do not see them in a book or paper, but test them and use those parts that are useful to us. You have all read of the silo. Do you know its worth in the dairy? its strong and weak points? its cost, and how it should be built? If not, post yourself. Let me say, the silo is to the dairy farmer what the twine-binder is to the grain-raiser. You can still harvest your grain with the cradle, but you can do it much cheaper with the binder. You can dairy without the silo, but you can do it cheaper with one. The silo is not a new thing, even in this country. Write for Bulletin 155 Experiment Station, Wooster, Ohio, to learn the value of the silo in dairy-feeding, and to Experiment Station, Madison, Wis., for Bulletin 125, to learn how to build one.

Do you understand what is meant by the balanced ration? You can balance and not know it (many of you do), or you can dangle along at dairy work and not balance the ration at all; but you can produce more economically by feeding a balanced ration. We have little to say about the price butter-fat is to bring, hence it is necessary for us to produce economically.

Did you know that the cow that freshens in the fall of the year will give fully 25 per cent more milk during the year than she would if she freshened in the spring? That the fall-fresh cow will then give butter-fat when it is high in price, thus making her fully 50 per cent to 100 per cent more valuable than she would be if she had calved in the spring? Last summer I paid 15½ cents a pound for butter-fat and had twice as much as I wanted, and last winter I paid 33 cents and did not get half enough to supply my trade. Did you know that the fall calf, raised on sweet skim-milk and corn, will be as large at one year old as the spring calf that runs with its mother will be at 1½ years? Try it, if you are skeptical.

Did you know that in nearly every herd of cows there are a few who do not pay their board, who are being supported for their company? It's a fact. Do you know how to operate the Babcock milk-test, and find out these ungrateful warders? For \$5 you can get a tester with full directions the way to run it.

2. The man must be in sympathy with his work, must be able to meet and treat his cows as intelligent friends, not as so many dead machines, or as a wheelbarrow to be used or let alone at will. The cow that has been taught that her master is her best friend, will give more milk than one who is half afraid of her keeper.

The calf, at the end of the first or second day, should be removed entirely from its mother to be raised on skim-milk. I have not time now to go into the question of raising calves on skim-milk, but you can raise a better dairy calf on skim-milk than on whole milk and for a fraction of the cost. Write to the Agricultural College, Manhattan, Kansas, for Bulletin 126 on calf-raising. When the calf is removed, the cow cries for her child; that is the golden moment for the dairyman. Go to her in kindness, treat her quietly, caress her, feed her, and relieve that pain in her udder by quietly milking her. She will soon look to you for this relief and will adopt you as her calf, will look for your coming and caress you as she would a calf. This is not a day-dream. I have done just what I am saying—have been adopted and complimented.

I am not able to tell you how many gallons of cow love it takes to bring a dollar, but I do know that sympathy has a commercial value; that a nervous cow so treated will give from 15 to 50 per cent more milk than one not so treated. The man must then be both mentally and sympathetically equipped.

The second factor in dairy success is the cow. The average cow of this country gives only about 175 pounds of butter a year, while the best cows give from 400 to 600 pounds, but yet these common cows are better dairy cows than the common owners are dairymen.

It has been demonstrated abundantly that these same 175-pound cows would, if well housed and liberally fed make from 225 to 275 pounds a year, and do that cheaper per pound than when they gave a small amount. Keep the cows you have, select them by means of scales and a Babcock tester. Keep calves from only those cows that you know to be best. Get a young bull of some pronounced dairy breed.

THIS SKIMMING MACHINE takes the cream quicker than wringers squeeze water from clothes. It gets a quarter to a half more cream than by setting, because it uses centrifugal force—a force thousands of times stronger, quicker, more effective than the force that makes cream rise in pans.

Sharples TUBULAR CREAM SEPARATORS

Skimming finished five minutes after milking, because boy of ten can run Tubular during milking. No skim milk to warm, because skim milk is fed still warm from cow. Half less washing, labor and expense, because only cream is put away. Catalog X-165 explains clearly.

THE SHARPLES SEPARATOR CO.
Toronto, Can., West Chester, Pa., Chicago, Ill.

THE SEPARATOR THAT PAYS FOR ITSELF

Occasionally the intending buyer of a cream separator who has but a small amount of ready cash to invest is tempted to put his money into one of the so-called "cheap" machines that are being largely advertised. Although he recognizes the superiority of the **DE LAVAL** machine and his need of a good separator, he invests in the "cheap" trashy machine because he does not happen to have ready the full amount which he supposes to be necessary to buy a **DE LAVAL**. This is where closer investigation of the matter would pay him well. A

DE LAVAL SEPARATOR

may be bought upon such liberal payment terms that it will more than earn its cost while the buyer is paying for it. In addition the **DE LAVAL** buyer has positive assurance that his machine will be good for at least twenty years of service, during which time it will save every possible dollar for him and earn its original cost over and over again. If he purchases the so-called "cheap" separator he must pay cash in advance and then take the chance of the machine becoming worthless after a year or two of use, to say nothing of the cream it will waste while it does last—all of which means that the buyer has virtually thrown away the money invested in the "cheap" separator and wasted his time, labor and product in the bargain. The **DE LAVAL** is THE separator that pays for itself—lasts on the average ten times longer than any other machine and insures the greatest possible profits in the end. This being the fact there surely can be no economy in the purchase of the so-called "cheap" separator, however small its first cost may be. Remember that the **DE LAVAL** pays for itself. Catalogue and full particulars gladly sent upon request. Write to-day.

Cream is Cash

AT The largest exclusive Cream Butter Factory in the World

NO WAITING

NO DELAY

NO RISK

NO UNCERTAINTY

NO ANXIETY.

Cream shipped to us is paid for immediately.

Our motto is:

CORRECT WEIGHT,

HONEST TEST,

and the highest possible price for butter-fat.

Under this banner we have established an enormous business. Through a continuation of this policy, we expect to increase our business each month.

A cordial welcome awaits every enterprising milk-producer, who appreciates having his product handled economically so as to get the greatest returns and that in **Cash**.

It's a pleasure to answer letters. Will be glad to hear from you.

Very respectfully,

BLUE VALLEY CREAMERY CO.,
ST. JOSEPH, MISSOURI.

PEERLESS CREAM SEPARATORS

Reasons Why the PEERLESS is the best

FIRST—Twice the capacity of any other bowl. That is to say two times smaller than any other bowl of equal capacity.

SECOND—Compound feature, two bowls in one, hollow bowl and disk bowl combining all the features of the tubular and disk machines.

THIRD—Enclosed frame. Free from dust. Injury resulting from machine impossible.

FOURTH—Perfectly noiseless.

FIFTH—Heavy enough and strong enough to lift a box-car, which insures durability.

SIXTH—The bushings made of phosphor bronze—the most serviceable material for the purpose. Fitted and guaranteed to be accurate to $\frac{1}{2}$ of 1-1000 of an inch.

SEVENTH—Every journal bushed with brass or phosphor bronze. This fact together with the fine adjustment described above, accounts for the light draft of the PEERLESS machine. Each bushing is made in duplicate and interchangeable and if at any time they show wear they can be replaced at a small cost.

EIGHTH—At normal temperature the skimmed milk will always show less than 5-100 of 1 per cent butter fat and generally less than 1-100 of 1 per cent butter fat. PEERLESS CREAM SEPARATORS are guaranteed to anybody—everybody, anywhere—everywhere.

The Master's Address.

(Continued from page 289.)

and now in force, on taxation, transportation, insurance, pure food, and various protective measures.

No one can fully state or even approximately estimate the value of these various laws to the farming interests of this country and to the public welfare. It is safe to say that the laws secured by Grange influence are worth billions of dollars to the American people, and hundreds of millions to the farmers alone.

Laws That Are Advocated.

The following proposed legislation was considered, approved and urged at the 33d, 34th, 35th, 36th, 37th, and 38th sessions of the National Grange:

- Free delivery of mails in the rural districts, and that the service be placed on the same permanent footing as the delivery of mails in the cities, and the appropriations to be commensurate with the demands and the benefits of the service.

- Provide for postal savings banks.

- Submit an amendment to the Constitution providing for the election of United State Senators by direct vote of the people.

- Submit an amendment to the Constitution granting the power to Congress to regulate and control all corporations and combinations, thereby preventing monopoly and the use of their corporate power to restrain trade or arbitrarily establish prices.

- Enlarge the powers and duties of the Interstate Commerce Commission, giving it authority to determine what changes shall be made or what practices are discriminative or unreasonable, and their findings to be immediately operative and to so continue till overruled by the courts.

- Regulate the use of shoddy.

- Enact pure-food laws.

- Provide for the extension of the markets for farm products equally with manufactured articles.

- The enactment of the anti-trust law, clearly defining what acts on the part of any corporation would be detrimental to public welfare.

- The speedy construction of a ship canal connecting the Mississippi River with the Great Lakes and the Great Lakes with the Atlantic Ocean.

- Revising the fees and salaries of all Federal offices and placing them on a basis of similar service in private business.

- Provide for parcels post, telephone and telegraph in the mail service.

- Provide for National and State aid to improve public highways.

I again recommend to the several State Granges that they continue to urge upon their respective State Legislatures the enactment of appropriate legislation on the following important matters:

- Anti-trust law and provision for State inspection of all corporations.

- Law on taxation that will compel all property to bear its just proportion of taxation.

- Pure-food law.

- Provide State Railway Commission with full power of fixing maximum rates for freight and passenger service on all railroads subject to their jurisdiction.

- Such a revision of the fees and salaries as will place them on an equitable basis.

The Grange stands as a unit for the principles involved in the above proposed legislation, all of which are important and should be speedily enacted into the laws of our country.

One of the most important acts of legislation to be secured at the coming session of Congress is the enlargement of the powers and duties of the Interstate Commerce Commission, so that it shall be given full power to give to the American people just and equitable rates on all railroads and other transportation facilities, and absolutely prevent discriminations, rebates or advantages arising from the use of the private car system.

President Roosevelt in his last annual message to Congress, said: "The Interstate Commerce Commission should be vested with power where a given rate has been challenged and after full hearing found to be unreasonable to decide, subject to judicial review, what shall be a reasonable rate to take its place, the ruling of the commission to take effect immediately, and to obtain unless and until it is reversed by the court of review."

This is a full and complete approval of the position of the Grange on this most important matter, one that underlies the prosperity of every industry of the country, and especially does it underlie the prosperity of agriculture. Agriculture furnishes 60 per cent of all the freight of our internal and coastwise trade. Agriculture, more than any industry is interested in a just and reasonable rate. The value of every

product of the farm itself, as railroads are now managed, is absolutely in the hands of a few railroad managers. They can raise or lower the price of every product of the farm to the producer and consumer, raise or lower the value of every farm in America, make it possible for agriculture to be reasonably profitable, or practically pauperize the farmers of the country. Government has not given any adequate protection to this loyal and deserving class, but has left them absolutely at the mercy of these corporations.

The time has come when justice should be secured. Patrons, look well to the actions of those who represent you in the Congress of the United States! Observe their actions; listen to their voice; and mark well how they vote upon the pending measures. Let those who are for the people show it by their voice and vote; and let those who are against the people for the corporations be known also. Every true American citizen should stand for the right, stand for his home, his family, and the best interests of the entire country.

We live in an age of intense commercialism, an age where men will do what a generation ago they could not do and maintain their self respect. I refer to the frauds uncovered in the cities of New York, Philadelphia, St. Louis, Chicago, Milwaukee and other cities of our country, and the recent developments of betrayal of trusts in banks and the three great life insurance companies in New York. These exposures and developments undermine public confidence and will greatly injure the prosperity of our country unless law is vindicated, and those in official or private life who are guilty, are punished and the dignity of law maintained.

We believe all public officials should not only avoid dishonest practices, but should avoid doing anything that could give rise to these suspicions. We believe that officers of State or Nation ought not to accept, or be allowed to accept free passes from transportation companies. We believe every State ought to pay such compensation to all officers that they need not supplement their salaries by any such methods. We believe the public conscience ought to be aroused on this question and such laws passed as will prevent the practice. It is humiliating to citizens of the State or Nation to know and believe and observe that their public officials have to accept such gratuities from corporations. It lowers the standard of independent manhood to see men occupying high official position and at the same time placing themselves under implied obligation to transportation companies.

IN MEMORIAM.

The silent reaper has invaded our homes and gathered sheaves of his own selection and borne them to the great storehouse into which all will sooner or later be garnered. We miss the cheerful words and fraternal hand clasp of several loved members who have met with us as members of the National Grange in previous years. Their voices are silent and their fraternal encouragement no longer cheers us in our annual sessions, but the influence of their work and devotion to the principles of our Order will remain forever as an inspiration to greater and better lives. We are called upon to mourn the loss of:

Brother Cyrus G. Luce, Past Master, Michigan State Grange.

Brother A. A. Smith, Past Master Rhode Island State Grange.

Sister Perlea M. Dethick, wife of the Master, Ohio State Grange.

Sister A. J. Richardson, wife of Past Master Tennessee State Grange.

Sister C. E. Shipley, wife of Past Master Oregon State Grange.

Sister Emily J. Trimble, wife of Past Secretary of National Grange.

Sister J. M. Thompson, wife of Past Master Illinois State Grange.

Sister Patience B. Hunt, wife of Past Master Maine State Grange.

CONCLUSION.

Eight years ago I was elected Master of the National Grange, an honor, I assure you, I have always appreciated most highly. During this time I have tried to be loyal to agriculture, and to discharge the duties imposed by this Order faithfully. These duties were easy and pleasant, made so by the fraternal courtesy and loyal support given me by the members.

The Order has prospered during this period, having made a net gain of membership of 78 per cent, and a net increase of the funds of the National Grange of 68 per cent. This gratifying success and prosperity came to the Order, not from any merit of mine, but on account of the united efforts of its members. No factional, sectional or partisan prejudices obtain in the Order to weaken its influence and power. It

**You Can't Afford to Make a Mistake**

Go about it in a judicious manner. Don't be over persuaded by smooth agents. Investigate for yourself. That's all we ask in our favor. We claim that the

OMEGA Cream Separator

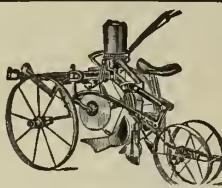

will do better work for you—producing better cream—with less labor in turning, less labor in washing and less trouble all around than any other separator ever made.

The work it does proves our claims. The only way we can really prove it to you is to show you. Words won't do it, but works will. Will you let us show you?

Read This Offer. We will be mighty glad to set up an Omega on your farm and let you try it and test it in every way—if it excels all other separators (**and it does**), why, it's the separator you want. If it doesn't, the trial will not cost you a cent. You can't afford to make a mistake. Try an Omega first. At any rate, send for **FREE TRIAL OFFER** and catalog, and our new book "More Milk Money." It tells how to care for cream; how to make butter; how to select good cows; how to wash butter; how to avoid "white specks," and a hundred other things you ought to know. We will send it to you **FREE** if you tell how many cows you keep, give address of a neighbor who keeps cows, and mention this paper.

The Omega Cream Separator Co.,
23 Concord Street, Lansing, Mich.

Please Remember: All we ask is that you give the Omega a trial—let it prove to you how good it is. If it does not satisfy you, you are out nothing

**The Best Lister**

to buy is the one that will do the most satisfactory work with lightest draft and smallest outlay for repairs, these features are all prominent in

The Tongueless Tricycle

the only lister that can be used without a pole. Bottom hangs almost directly between the wheels, and a square corner can be turned with bottom in the ground. It is frameless and has no complicated parts to break or wear out. Driver sees every kernel of corn as it drops. Actual weight 356 pounds. Write to-day for booklet giving complete description and our proposition to you.

SENT ON FREE TRIAL

It would surprise you to know how much wear and injury clothes receive when washed by rubbing between rollers or heavy lids, jerked around by pegs, or in fact by any friction method. None of this in the Gee-Whizz as it washes by driving hot soap-suds through the clothing with force and speed, by means of water wheels. No friction on the clothes. Guaranteed to wash perfectly clean in from four to seven minutes. Galvanized steel tank. No warping and no falling apart. Adjustable to wash anything from a napkin to a quilt, or a length of carpet. Write at once for full particulars and free trial proposition.

Gee-Whizz Mfg. Co., E Walker St. Des Moines, Iowa

has been the pleasure of our members to contribute what they could to increase the prosperity and happiness of each other, to elevate agriculture, promote general prosperity, improve society, and to make brighter, happier and more sunny farm homes in all parts of our country.

This session closes my official term. I return to you the gavel and other insignia of office and shall take my place as an humble member with the great army of Patrons of Husbandry. I need not bespeak for my successor the same loyal and cordial support and courtesy you have extended to me. Your devotion to the Order will inspire you to continue in the future as in the past, to loyally support the officers chosen to preside over your deliberations, to make more effective their efforts to extend, improve, and strengthen the Order that its helpful influence may be felt in every farm home in our land.

As the years come and go, industries of our country will prosper and decline, fortunes will be made and lost. Even government may change its form, but so long as the world stands agriculture will be the foundation of National wealth and prosperity.

There will be an open meeting of Indian Creek Grange at Indian Creek School House in Northern Shawnee County, on the evening of March 29. Following is the programme. "Why Do We Favor National Aid to Highway Improvement?" C. D. Skinner; "Why Should Arbor Day Be Observed?" County Superintendent J. R. Carter. Music, Carl Ball. "Practical Poultry Raising," Mrs. H. K. Evans, followed by discussion by Mrs. O. F. Whitney and Mrs. Merritt. It is expected that Indian Creek Grange will dedicate its new piano at this meeting. Refreshments at the end of the meeting.

The Gentle Art of Gardening.

(Continued from page 291.)

often found a garden of flowers that was not only pleasant to the passer-by, but which furnished almost the only variety and recreation in lives that had but little of other joys or pleasures. In cities where space and sunlight are at a premium, the roofs and housetops are sometimes utilized as space for plants.

LITERATURE ON GARDENING.

The literature pertaining to the garden has been greatly enriched in recent years, which is another indication of a popular demand for information on things of the garden, and the shelves of any prominent bookstore now carry books and magazines on all branches of this subject. The flower and seed catalogues are handsomely gotten-up and richly illustrated, and while some allowance must be made for exaggerated descriptions, yet in the main they are reliable and full of information, and they have done more than any other one agency to spread a knowledge of and love for flowers and trees and gardens. If the description of a new variety seems too rosy, you may be surprised to find, as I have found, that with the proper care and attention, the new variety even surpasses the description. This, of course, may have been due to the superior qualities of our Kansas soil and sunshine. The first catalogue of plants was published nearly three hundred years ago by Gerard, an English botanist who grew and named more than a thousand varieties and species of plants. The first catalogue in the United States was published about one hundred years ago, and now there are many whose annual visits are welcomed as a friend bringing a message of joy and hope and anticipation of the good and beautiful things that may come through the year. The first flower catalogue of my recollection was in the early sixties when we received that sent out by James Vick, and the truthful descriptions of flowers and vegetables and the clear, practical, cultural directions of his catalogues were written with such a kind friendliness, that when he died thousands of people over this whole land whose lives had been made brighter by his flowers or his kind words, felt that they had lost a personal friend. Probably no man ever did more to spread a knowledge of flowers in this country than did James Vick.

Of all books giving practical information about everything to be planted in a garden and the different varieties of plants, whether trees, shrubs, flowers or fruits, with full directions for their care, no one book with which I am acquainted, is so complete as Professor Bailey's "Garden Making." Of other books there is no dividing line between those written for practical information about gardening, and those like the story of "Elizabeth and Her German Garden," or "The Garden of a Commuter's Wife," or "Ellwanger's, the Garden Story," and many others which may be called garden literature. It was of this class of books that H. W. Beecher said: "Every book which interprets the secret love of trees and gardens, every essay that brings men nearer to the understanding of the mysteries which every tree whispers, every brook murmurs, every weed even hints, is a contribution to the wealth and happiness of our kind."

We have a fine prospect in Topeka of having a collection of trees of native and exotic growth that will soon be a very interesting and instructive object lesson to all who care to study it. At Central Park a start has been made that promises much. Not only most of the ordinary species of trees, but many that are scarcely to be seen elsewhere, have been planted here and are growing well and have endured two winters of unusual severity. Several species of magnolia, deciduous cypress, liquid amber, tulip tree, azalea, spinosa, and many choice specimens of shrubs and hardy plants are among the things already established. It is to be hoped that in the part yet to be planted, there may be found room for a specimen, not only of every tree native to Kansas, but of every tree that will grow in this climate.

In the new Willow Park which is to be planted in the near future, as a result of the efforts of the members of this club, it requires no stretch of imagination to picture a place of beauty and rest that will delight beholders for many generations to come.

PRACTICAL RULES.

Coming to a practical discussion of how to make a garden and what to plant in it, I know of no general advice any better than the twelve rules given by George H. Ellwanger, in his

delightful book, "A Garden Story." These rules are good for any garden, large or small.

I. Whatever is worth doing at all is worth doing well.

II. Study soil and exposure, and cultivate no more space than can be maintained in perfect order.

III. Plant thickly; it is easier and more profitable to raise flowers than weeds.

IV. Avoid stiffness and exact balancing. Garden vases and garden flowers need not necessarily be used in pairs.

V. A flower is essentially feminine and demands attention as the price of its smiles.

VI. Let there be harmony and beauty of color. Magenta in any form is a discord that should never jar.

VII. In studying color effects do not overlook white as a foil. White is the lens of the garden's eye.

VIII. Think twice and then still think before placing a tree, shrub, or plant in position. Think thrice before removing a specimen tree.

IX. Grow an abundance of flowers for cutting. The bees and the butterflies are not entitled to all the spoils.

X. Keep on good terms with your neighbor; you may wish a large garden favor of him some day.

XI. Love a flower in advance, and plant something every year.

XII. Show me a well-ordered garden, and I will show you a genial home.

THE GARDEN OF THE FUTURE.

What of the garden of the future? With all the applications of modern science and other arts, what may we expect of improvement in the art of gardening, resulting from scientific research and experiment? Does gardening afford a field for the use of modern, scientific knowledge?

For reply: We may surely expect great improvements in all forms of plants, fruits, and flowers, as we become better acquainted with the characteristics and physiology of plants, and with the laws and processes of their growth and reproduction, and are able to make a patient application of their knowledge to the work of hybridization, selection and propagation. The work that has been done and is being done by Mr. Burbank, with his marvelous skill, is already furnishing substantial proof of what may be accomplished, and is probably only a beginning of this great work.

With the magnificent fund provided for research and experiment in this line, and with the attention which the work is receiving from the Government and from earnest men, trained in all branches of science which bear on it, results must surely come that will be full of pleasure and profit to the whole world.

Gardening, while it may be classed as a fine art, has two branches: one, the planning of grounds, the arranging of trees, shrubs, flower beds, garden walks, and other embellishments, which more particularly would require the head and the heart and the eye of the artist; the other branch, that of caring for the plant, its propagation and improvement and the ability to select those plants which under proper conditions may be made to improve the race. Mr. Burbank seems to be a master of this branch of the art, and his success will stimulate others to work in this field.

For practical results right here at home, it seems to me that most can be done by stimulating among our friends and neighbors an interest in all that helps in improving and beautifying the surroundings of every home, and especially to show them that there are no deep mysteries about the art, and that for an ordinary house, no great outlay of time or money or effort is necessary, and that for all the outlay given, large returns will surely come, especially to those who love the gentle art of gardening.

Don't Plant Scrub Corn.

Like begets like, as surely as sunset follows sundown. This has been demonstrated a thousand if not millions of times in the kingdom of plant and animal breeding. In the face of this we have wondered a thousand times why some farmers will continue to breed to scrubs and continue to plant scrub varieties of seed-corn, especially when a bushel of seed-corn will plant 7 or 8 acres, and costs by 15 to 20 cents per acre for seed that will give an increased yield of 20 or 30 bushels per acre, making the increased yield at a cost of less than a cent per bushel. In another place in this paper will be found the illustrated advertisement of "Ratekin's Pride of Nishna" yellow dent, which has become so famous all over the Western and Central Western States. Every corn-grower should if he does not already grow it, send to the Ratekin Seed House of Shenandoah, and get a few bushels of this corn for seed the coming season. The price at which

Dry Farming Magazine.

The Dry Farming Magazine published at Denver, Colorado, is devoted to scientific soil culture and is edited by Prof. H. W. Campbell, a renowned soil expert.

OUR MARCH OFFER.

To any of our readers who will send in two new subscribers for one year and \$1 we will send Dry Farming Magazine for one year. Address, The Kansas Farmer Company.

Colorado Farm and Ranch is the name of a new weekly publication at Sheridan Lake, Colo., edited by Leslie F. Randolph, a prominent newspaper man formerly of Kansas. It starts out with a helpful list of Kansas subscribers who are interested in the wonders of Eastern Colorado. The KANSAS FARMER has received many inquiries regarding this section of the country. All who are interested should write to Mr. Randolph.

R. F. D. Carriers Like Caustic Balsam.
Fair Grove, Mo., Jan. 30, 1905.
The Lawrence Williams Co., Cleveland,
Ohio:

I used Gombault's Caustic Balsam for an extra bad case of ring bone and can say it did good from the first application. I believe it is all you claim for it.

JOHN W. HARTT.

Grain in Kansas City.

Receipts of wheat in Kansas City yesterday were 55 cars; Saturday's inspections were 34 cars. Offerings were small for Monday. The demand was light. Prices were irregularly higher, in some instances unchanged, in others up 2@3c per bushel. The greatest advances were on low grades. The sales were: No. 2 hard wheat, 1 car 76½c, 2 cars 75c, 4 cars 74½c; No. 3 hard wheat, 1 car 74½c, 2 cars 74c, 3 cars 73½c, 1 car 73c, 1 car 72½c; No. 4 hard wheat, 1 car 70½c, 3 cars 70c, 2 cars 67c; rejected hard wheat, 1 car 64c, 1 car 63c, 1 car 62c; No. 2 red wheat, 1 car 90c; No. 3 red wheat, nominally 84 @87c; No. 4 red wheat, 1 car 80c; No. 4 spring wheat, 1 car 71c; mixed wheat, 1 car 75c.

Receipts of corn were 40 cars; Saturday's inspections were 29 cars. The demand was fair and the offerings small. Sales were made at 1@½c advance, as follows: No. 2 white corn, 1 car 40c; No. 3 white corn, 1 car 40c; No. 2 mixed corn, 3 cars 38½c, 1 car 38½c; No. 3 mixed corn, 12 cars 38½c; No. 4 mixed corn, 1 car 36c.

Receipts of oats were 16 cars; Saturday's inspections were 15 cars. The increased offerings met with fair demand and prices were in the main unchanged, as follows: No. 2 white oats, 4 cars 21½c; No. 3 white oats, 5 cars 30c, 4 cars 30½c, 1 car 31c; No. 2 mixed oats, 1 car 30½c, 1 car red 32c; No. 3 mixed oats, 1 car 29½c.

Barley was quoted 36@37c; rye, 56@58c; Kafir-corn, 58@60c per cwt.; bran, 85@87c per cwt.; shorts, 90@95c per cwt.; corn-chop, 75@77c per cwt.

South St. Joseph Live Stock Market.

South St. Joseph, Mo., March 12, 1906.

Supplies of cattle at the five leading markets to-day were 16,000 less than the number in sight on last Monday, and as result of increased marketing, steer values dropped 10c all around. Cows and heifers were only in moderate supply, and the market ruled active to strong, 10c higher. Bulls and veals were in good demand and steady. Receipts of stockers and feeders were considerably larger than was expected, and buying was comparatively free of desirable qualities at prices fully steady with the low close of last week. Following are current quotations: Native steers \$4.10@6; Texas and Westerns \$3.75@5.40; cows and heifers, \$1.65@4.60; bulls and stags \$1.90@4.65; veals \$3@6.75; yearling calves \$2.50@3.75; stockers and feeders \$3@4.50.

There was a very general increase in supplies of hogs at all points to-day, as compared with corresponding day last week, and buyers took occasion to depress values. The opening prices were around 2½@5c lower than general trade of Saturday with more selling 5c lower than any other way. Prices ranged from \$6@6.25 with bulk selling at \$6.20@6.25. The country should keep in mind that packers will depress values on any increased receipts, therefore, little rallies should not be followed very closely, and shipments should be made as soon as ready. Demand here continues very strong, and prices are being maintained at a very high level, as compared with competitive points.

The receipts of sheep are in excess of 19,000 to-day, and the market was active and steady on all offerings, lambs selling up to \$6.70 and ewes at \$5.40.

WARRICK.

Kansas City Live Stock Market.

Stock Yards, Kansas City, Mo.

Monday, March 12, 1906.

As a result of light cattle receipts last week, the market closed the week 15@25c higher on killing cattle than close of previous week. Some sales of heifers showed even a greater advance, while stocker and feeder trade slacked up a little after first of the week, account of absence of buyers. Yard traders were unable to make a good clearance, although the supply was light and they reduced prices 15@25c from the high time of the week. Bad country roads and muddy feed-lots and soft fields are given as the reasons for buyers staying at home.

The cattle run to-day is 12,000 head, containing a good proportion of beef steers. Market is steady to 10c lower. Buyers were unable to fill their orders last week and packing houses are killing up clean, but orders for meat are not as urgent as a few weeks ago. The supply to-day is three to four thousand greater than either of the last two Mondays, but the run for last week was only 31,000 head, a reduction of 10,000 from the week before. Top steers sold at \$8.80 last week, top to-day \$5.45, bulk of sales \$4.75@5.30. These prices are 10@40c higher than at this time last year, when we were on the eve of the

THE KANSAS FARMER

KANSAS FARMER.

Established in 1863.

Published every Thursday by the
KANSAS FARMER CO.,
Topeka, Kansas

SUBSCRIPTION PRICE: \$1.00 A YEAR

Entered at the Topeka, Kansas, postoffice as second-class matter.

ADVERTISING RATES.

Display advertising, 20 cents per line, agate (fourteen lines to the inch). Continuous orders, run of the paper, \$1.82 per inch per week.

Special reading notices, 30 cents per line.

Special rates for breeders of pure-bred stock.

Special Want Column advertisements, 10 cents per line or seven words per week. Cash with the order.

Electro must have metal base.

Objectionable advertisements or orders from unreliable advertisers, when such is known to be the case, will not be accepted at any price.

To insure prompt publication of an advertisement, send cash with the order; however, monthly or quarterly payments may be arranged by parties who are well known to the publishers, or when acceptable references are given.

All new advertising orders intended for the current week should reach this office not later than Monday.

Change of copy for regular advertisement should reach this office not later than Saturday previous to publication.

Every advertiser will receive a copy of the paper free, during the publication of the advertisement.

Address all communications to

KANSAS FARMER CO.,

116 West Sixth Ave., Topeka, Kans.

Special Want Column

"Wanted," "For Sale," "For Exchange," and small want or special advertisements for short time will be inserted in this column without display for 10 cents per line of seven words or less per week. Initials or a number counted as one word. No order accepted for less than \$1.00.

CATTLE.

HOLSTEINS—Bull calves 6 and 10 months old—good ones. H. B. Cowles, Topeka, Kans.

REGISTERED Aberdeen-Angus cattle for sale. Fifteen bulls from 10 to 20 months old; 15 heifers from 1 to 2 years old; 15 heifers from 2 to 3 years old; 25 cows some with calves at side. I am making farmers prices on all or a part of the above cattle as I do not have room for them this summer. Heather Ectipsen 33761 in service. A. L. Wynkoop, Bendena, Kans.

CHOICE registered Shorthorn bulls and heifers, cheap. M. C. Hemenway, Hope, Kans.

boom prices paid in April. Heifers and steers mixed sold at \$5.35 last week, choice heifers bring \$4.50@5, best heavy cows \$4.60, bulk of she stuff \$3.25@4.40, bulls \$3@4, cannars and stock cows and heifers \$2.25@3.25. Veals sell up to \$7 again. Feeders range from \$4@4.75, stockers \$3.35@4.50, some low grade stuff \$2.85@3.25.

Hog supply last week was 42,000 head, a decrease of 10,000 from the week before, and smallest run this year. Prices advanced 5@15c during the week. The run to-day is 7,000 head, market weak to 5c lower, tops at \$6.25, bulk of sales \$6.10@6.20, light weights up to \$6.15. At no time this winter have packers been able to accumulate any stocks of pork products, and it is believed that prices will continue strong even if the run improves with better shipping conditions in the country. Prices are \$1.25 higher now than a year ago.

Sheep and lamb run was 42,000 last week, fully up to the average lately. Lambs sold a shade lower, but aged sheep continued scarce and firm. Supply to-day is 7,500, market strong to 10c higher, including lambs, which ranged from \$6.35@6.75 to day. Ewes sold to-day at \$5@5.35, yearlings \$6. wethers not tested but quotable at \$5.70@5.90. Some thin lambs, shipped in because feeders ran out of feed, sold last week to be finished out at \$5.70@5.90. J. A. RICKART.

CATTLE.

FOR SALE—The pure Crickshank bull, Violet Prince No. 145647. Has been at the head of our herd as long as we could use him. An extra animal. H. W. McAfee, Topeka, Kans. 2 miles west of Kansas Ave. on Sixth street road.

California Farms

Every Picture Speaks for Itself

Opportunities for the man of small means.

Ask us about them.

Thatched Summer House, covered with Palm Leaves. Delightful cool Retreat. Kearney Park, five miles east of Fresno Irrigated Farm Company's Tract.

Opportunities for the Capitalist or man with large Capital
Write for particulars

The A B C of Farming in California

Continued.

Question: Does dairying pay in Fresno County? Answer: Indeed it does. Better than any where else. We are selling our butter fat at 33c per pound right now and can average 25c for the year. We have two creameries in Fresno and are building another modern creamery in the midst of our tract. The man with 20 to 40 acres in alfalfa can make money very fast in the dairy business here. Remember that here grass grows the year round. Your cows are out in pasture in February just as they are with you in June.

Question: Can I get cows in Fresno County at reasonable prices? Answer: Yes. This is a great cattle and sheep country, but if you have a fine strain of Holsteins or a milking strain of Shorthorns, you had better bring them with you as they will sell well.

Question: How about grapes and vineyards in California. Answer: This is one of the greatest grape countries in the United States. We divide the grape industry into three distinct kinds of business. Table grape raising, raisin grape raising and wine grape raising.

Question: Which is the most profitable of the three? Answer: The table grape is the most profitable of them although it requires the most care to properly pack and ship the grapes. A fully matured

vineyard will produce from \$100 to \$400 per acre. The raisin industry is successful here which is the only sucessful raisin district in the United States. Raisins produce from \$75 to \$150 per acre net. Wine grapes are very easy to handle and requires no particular knowledge. They are picked in bulk and are sold to the winery by the ton and will produce from \$60 to \$150 per acre. This is a great sweet wine dristrict. We have vineyards in Fresno County like you have corn fields in Iowa covering hundreds of acres.

Question: Do you raise tree fruits in any quantity? Answer: Yes. We have great orchards of apricots, peaches and figs. A peach orchard is about the finest thing that one can have on earth. The net yield is from \$100 to \$125 an acre.

Question: Do you have any scale or disease on your trees? Answer; No. The warm dry summers of Fresno County are an absolute protection against disease. Orchards are free of scale and this is a matter of great importance.

Question: Can you tell me anything else about the opportunities on the Fresno Irrigated Farms? Answer: Yes, But it would require all the space on this paper. Write to us at once for our 64 page booklet. This will give you all the information you desire. We will mail it to you free upon request.

The other a black stallion of same breeding as Cricket.

Look up these horses and you will find their breeding of the best. Write me for full description.

**Wyatt Stanley
ANTHONY, KANSAS****NEW BOOK JUST ISSUED
SUCCESSFUL
FRUIT CULTURE**

A Practical Guide to the Cultivation and Propagation of Fruits.

By SAMUEL T. MAYNARD,
Formerly Professor of Horticulture at the Massachusetts Agricultural College.

This book is written from the standpoint of the practical fruit grower; it is up to date in every particular, and covers the entire practice of fruit culture. It gives in plain, practical language, descriptions of such varieties as are most in demand in our markets, and the methods practiced by the most successful cultivators of many sections of the country. Separate chapters are devoted to the apple, pear, peach, apricot and nectarine, plum, cherry, quince, mulberry, grape, blackberry, raspberry, cranberry, strawberry, blueberry, bucklerberry, subtropical fruits, propagation of fruit trees and plants, fruit growing under glass, insect pests and fungous diseases. The chapter on the apple is particularly comprehensive and complete, forming a monograph in itself. The chapter on forcing peaches, grapes, strawberries, and other fruits, describes the most successful methods of the present day, and is the most recent practical treatise on this important industry.

Illustrated. 5x7 inches. 265 pages. Cloth. Price, postpaid, \$1.00.

WHEN WRITING OUR ADVERTISERS MENTION THE KANSAS FARMER

FRANK IAMS

lions than any man in the United States. He has his "selling clothes" on, no man with cash or bankable note gets away from Iams. Iams' daily "Horse show" and his "town of horse barns" filled to the roof with wide-as-a-wagon "black boys."

120—STALLIONS—120

2 to 6 years old, weight 1700 to 2600 pounds, 90 per cent blacks, 50 per cent ton stallions." All registered, approved and stamped by European Government. Dad, it's "100 to 1" that Iams is pushing his competitors off the roof and hypnotizing his buyers with "top notchers" at 50 cents on the dollar, "let live prices." Iams' "horse show" at Iowa and Nebraska State Fair was the "talk of the town." The "best ever." All winners and sons of winners. His 2, 3 and 4 year old Percherons, Belgians and coach stallions won every 1st, 2d, sweepstakes and grand sweepstakes prize at Nebraska State Fair. At Iowa State Fair they were winners of 90 per cent of same prizes in above classes, and the Iowa and Nebraska people said Iams is a "hot advertiser," but "he has the goods" better than he advertises. Teddy, it's "16 to 1" that Iams' "Peaches and Cream" stallions are "hot stuff" (for competitors). "It's a clinch" that Iams saves his customers thousands of dollars in commissions and middlemen's profits. Iams places \$1000 insurance for \$60.

\$1000—SAVED AT IAMS—\$1000

Ikey! What a rich graft these "slick stallion salesmen" are working on the honest farmer selling 4th rate stallion at \$2000 to \$5000. Iams sells "top notchers," so good, big and cheap that they do not need to be peddled to be sold. Mr. Buyer, see Iams' stallions yourself. Take no "gold brick stallion salesman's" word. Iams has "the goods" you read about. His establishment is worth going 2000 miles to see. Iams makes his competitors "holler." He is knocking "high prices" out of the X'mas tree. Iams saws wood, "butts in," sells more stallions each year. He makes every statement good. George, dear! Buy a stallion of Iams. His \$1200 stallions are much better than our neighbors paid those Ohio men \$4000 for. Then I can wear the diamonds. Iams speaks the languages, buys direct from breeders, pays no buyers, salesmen or interpreters, has no two to ten men to divide profits with. Iams guarantees to sell a better stallion at \$1000 to \$1500 than are sold to Stock Companies for \$2500 to \$5000 by slick salesmen, or pay you \$100 for your trouble, you the judge. Iams pays horses' freight and buyer's fare; gives 60 per cent breeding guarantee. Write for eye-opener and greatest horse catalogue on earth. References: St. Paul State Bank, Citizen's National Bank, St. Paul, Nebraska.

DO IT NOW.

The Lincoln Importing Horse Com'y

Lincoln, Nebraska

Now we are here with our catalog. It is ready for distribution. Parties contemplating buying stallions write for catalog. Remember, every stallion represented in the catalog is of our own importation and all of them this year's importation, except the group of three. We also have a large number of stallions not exhibited in our catalog. Note what we say in regard to this group. The three weigh 5,890 pounds; the largest stallions in the West in the same flesh. Some of our 2-year-olds of our last importation will tip the scales at 1,850 to 1,900 in only moderate flesh. Come and examine them at our expense if you find that we have misrepresented to you. Remember, our scales are in front of our office. You do your own weighing.

"International Stock Food" is prepared from pure, medicinal Roots, Herbs, Seeds and bark and is fed in small amounts as an addition to the regular grain feed. It Purifies the Blood, Cures and Prevents Disease, Tones up and Permanently Strengthens the Entire System and greatly Aids Digestion and Assimilation so that each animal obtains more nutrition from all grain eaten. Endorsed by over One Hundred Farm Papers and over Two Million Farmers and Stockmen. Sold by over One Hundred Thousand Dealers on a "Spot Cash Guarantee" to give you paying results or your money promptly refunded. Dan Patch has eaten "International Stock Food" every day for over three years and you know what he has done. WE HAVE THOUSANDS OF TESTIMONIALS SIMILAR TO THE ONE GIVEN BELOW.

Breeders Who Win Premiums Are the Men It Pays to Follow.

CHARLES E. KELLER, BREEDER OF LEADING STRAINS OF POLAND CHINA HOGS.

INTERNATIONAL STOCK FOOD CO.

Gentlemen:

You will find under separate cover a picture of my Poland China show herd. You will also find enclosed a record of their winnings from World's Fair at St. Louis, 1904, down to the present time. As my hogs were prepared for the show with the use of your "International Stock Food," I thought perhaps you would appreciate the picture as it might prove valuable for your Bulletin, as they have an unequalled show record. At the World's Fair the litter from my great sow, Lena Perfection, won eight ribbons, which is an unequalled record. I also exhibited seven head at St. Louis and won nine money prizes and Reserve Champion. My winnings at State Fairs have been remarkable in show ring history. "International Stock Food" is a great and reliable preparation.

Very respectfully,

CHARLES E. KELLER.

NEWARK, OHIO, Jan. 17, 1906.

A Satisfactory Roof

THE ROOF is the most important part of any building you own. It is the part that requires careful selection of materials if you want to prevent leaks and repair bills. Rust and decay are the two worst enemies of roofing, and the material that will not resist these makes a poor roof and soon causes dissatisfaction.

There is only one roofing that will not rust or decay:

mica-noid
READY ROOFING

We do not ask you to take our word for this only; we have in our office hundreds of letters from persons who have used this roofing for years; we want you to read them.

If you are interested in a roofing that is cheaper in price than tin or shingles and will outlast either, write for a copy of these letters, also FREE samples of Mica-Noid.

KANSAS FARMER

Volume XLIV. Number 12

TOPEKA, KANSAS, MARCH 22, 1906

Established 1863. \$1 a Year

The National Dairy Show

On February 15, at Chicago, there was opened in the Coliseum, an exposition that was an epoch-marker in the dairy industry of the United States and the world. This magnificent building, which is one of the largest assembly halls in the United States, was filled to its utmost capacity with the exhibits of everything pertaining to the dairy and the dairy industry. Indeed, a large part of the exhibit was of necessity placed in another building because of lack of room in the Coliseum.

This great show was the event of years of waiting and the result of years of working. Such a show has been earnestly desired by those interested for many years and attempts have been made to hold a National dairy show in Madison Square Garden in New York, but they resulted disastrously. The people of that city are not particularly interested in the dairy or the dairy cow, and the enormous expense attendant upon the making of an exhibit that would in some measure be a correct representation of this great industry,

proved too great a burden. Chicago, on the other hand, is in the center of the richest dairy region of the United States, and the Elgin market which is close by, sets the price for all dairy products.

It would be difficult to describe or even enumerate the vast number and variety of objects on exhibition in connection with this dairy show. Attempts have been made a number of times to make provision for the classes of dairy cattle in the International Live Stock Exposition, but without results on account of lack of room. The National Dairy Show, however, included an exhibit of dairy cattle in which Ayrshires, Guernseys, Holstein-Friesians and Jerseys were brought from the United States and Canada to contest for the prizes offered by the management. The entire annex of the Coliseum was used for the exhibit of dairy cattle of which there was a goodly showing of all the breeds named.

Cream-separators were there in abundance. All of the prominent man-

ufacturers of these indispensable dairy machines were represented in handsomely decorated booths and each served to attract its crowd of admirers. The DeLaval Separator Company, of New York and Chicago, had a fine exhibit, included in which were the first two separators sold in America in 1886. This afforded a wonderful object lesson by comparison with the modern and up-to-date pattern of machine. They also showed a new style 700-pound separator run by a small fan motor and one of the attractive features of their booth was a moving panorama showing how the cream-separator pays off the farm mortgage and gives new prosperity to the owner.

The Sharples Separator Company, of Westchester, Pa., and Chicago, made a magnificent showing with forty-eight separators of various sizes and kinds. Present in their booth during a part of the week was the inventor of the tubular machine. The exhibit was in charge of Mr. A. W. Rockwell who was assisted by a number of his hustling salesmen, each of whom did everything in his power to make the visitor at home.

The Empire Cream Separator Company, of Bloomfield, N. J., made a splendid showing. This company is now putting on the market a new-

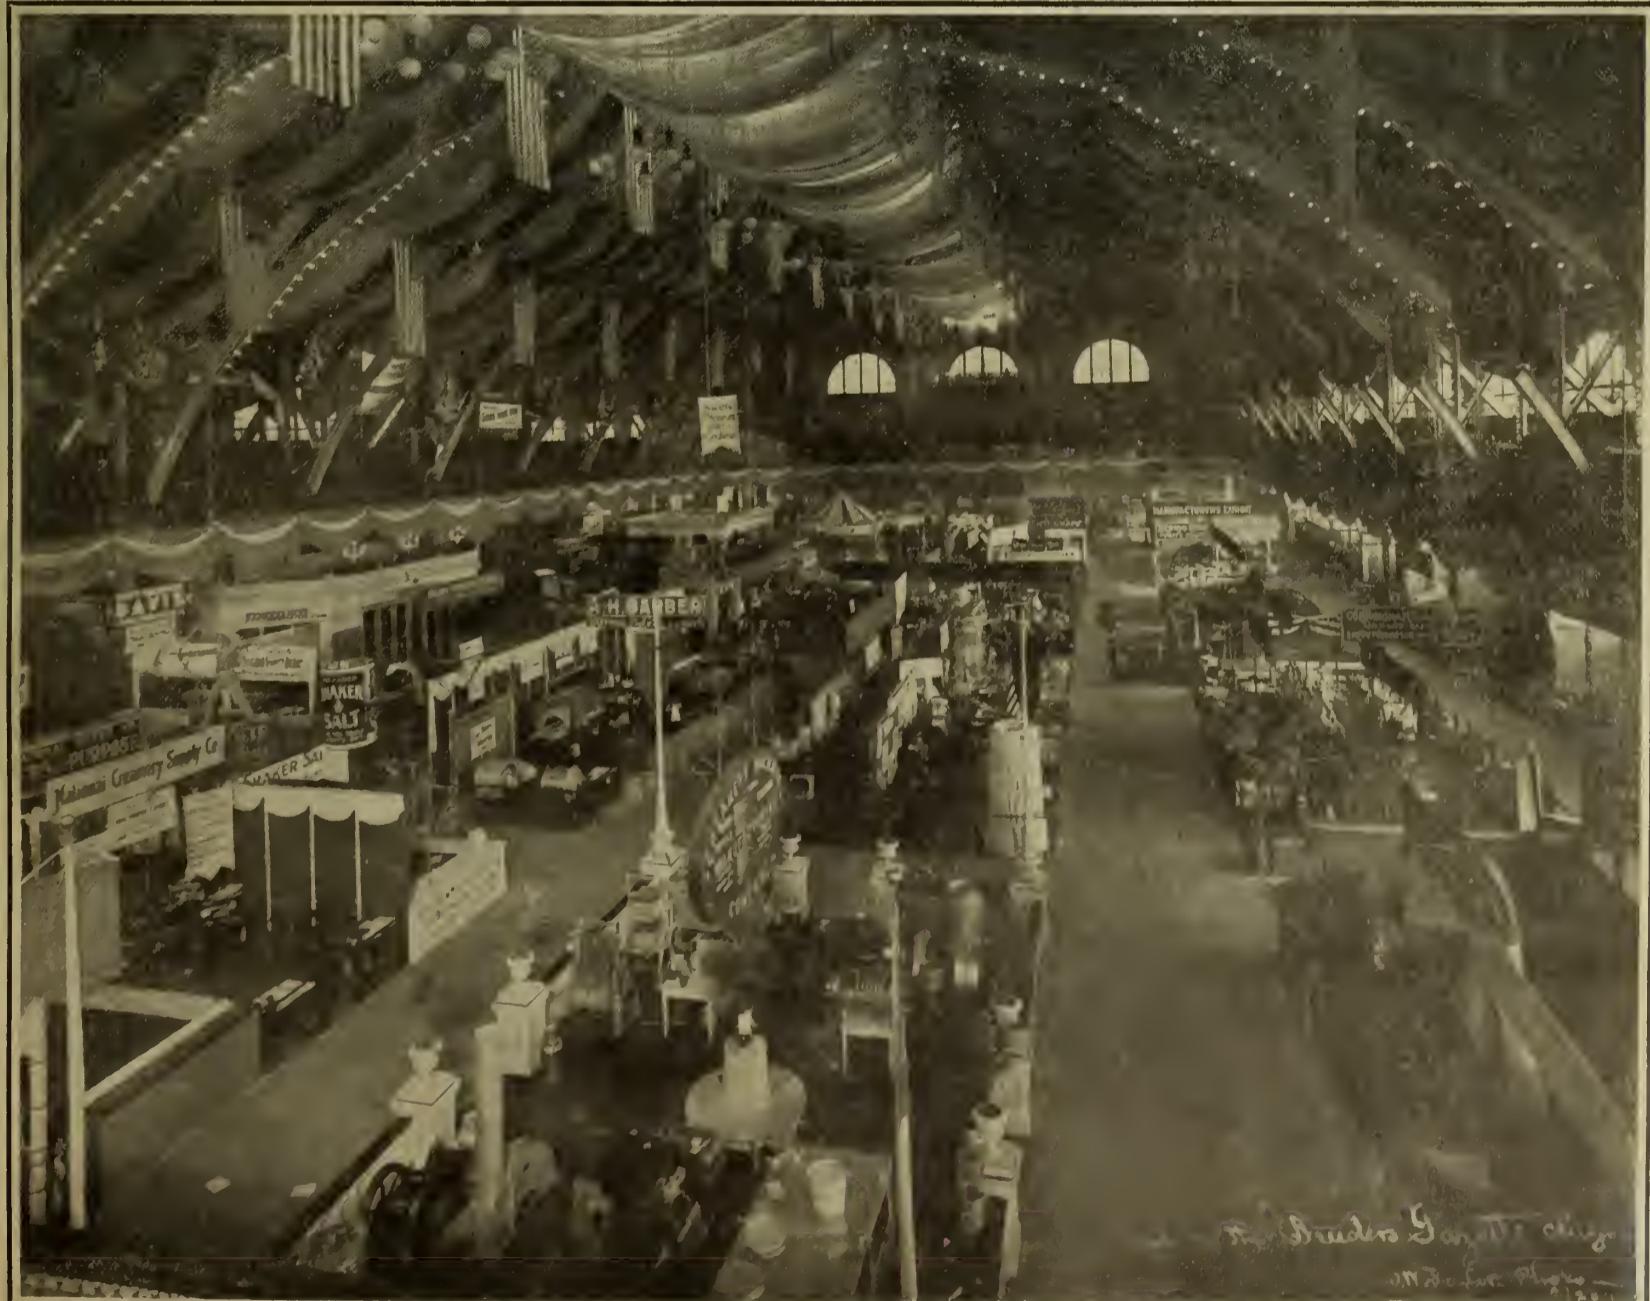

style, frictionless, hand separator which seems absolutely perfect. The name "frictionless" is apt, but the visitor is astonished to see the machine run for thirty minutes after the power has been removed. The new frictionless Empire is bound to be a winner.

The Vermont Farm Machine Company, of Bellows Falls, Vt., had a comprehensive exhibit of United States cream-separators of various sizes, together with tread powers and creamery supplies. The United States cream-separator is a well-known and popular machine, and is one of the mortgage-lifters of the country.

The Omega Separator Company showed four different sizes of their hand separators together with a sectional view of the machine as exhibited at the World's Fair. This proved a very attractive exhibit.

Other separators were shown in their several booths and all proved attractive. A further step in advanced methods of butter-making was shown in the operation of the radiator. This machine makes butter direct from the milk by first separating the cream and then extracting the butter-fat. This is an old idea which is worked out practically now for the first time. Its predecessor was the butter-extractor which

(Continued on page 310.)

Birds-Eye View of Interior of the Chicago Coliseum during the National Dairy Show.

Editorial

WHAT HAVE THE PROMOTERS ACCOMPLISHED.

The year 1905 was a great one for "promotors." Among the various projects in which individuals, especially farmers, have been asked to join and to which they have been asked to subscribe various sums—a dollar and upwards—some have claimed to be able to influence prices of farm products. The official report of the records of prices for the year are not really pleasant reading for some of the more pretentious of the promoters.

The record price for wheat at Chicago for the year was \$1.54 in February. The decline was almost constant until December for which month the top price was 90 cents. The official record closed March 5 at 80 cents.

But perhaps the promoters prefer to consider corn. The Chicago price for corn in March, 1905, was 45½ to 48½ cents; in July it was 53½ to 59. The year closed at 42 to 50½; to March 5 this year the record is 40 to 40½.

Potatoes have done better. The year opened at St. Louis with 35 to 42 cents for January, 1905, and closed at 58 to 66 for December. To March 5 this year the price is 52 to 55.

The promoters have had little to say as to what they would do to the price of hogs. Hogs are given to perverseness—to going the other way, as it were—so that the fixers of future prices have been little inclined to tackle the hog. Well, the hog started in at \$3.90 to \$5 for January, 1905, and closed the year at \$4.50 to \$5.35. He marched nobly up to \$5.90 to \$6.52½ up to March 5, in Chicago.

Butter began 1905, at 28 to 29½ for January. After some fluctuations it closed the year at 24 to 25 for December at Elgin. To March 5 the price was 27.

It is fair to assume that the various schemes whereby prices were to be fixed for farmers, at a dollar and up per farmer, had nothing to do with the general declines.

The KANSAS FARMER has been cordially invited to boom some of these schemes, has been threatened with loss of patronage if it refused. There may be those who will not like the above showing from U. S. Government official records of prices. But the KANSAS FARMER's first duty and purpose is to be true to its readers. It is yet to be shown how any of the schemes so far worked has affected the general markets to the advantage of the farmers. This does not allude to cooperative enterprises which, under honest and capable management, have assisted their members in both buying and selling. These are legitimate business undertakings. But the promoter who claims to be able by some occult methods to influence general prices, and wants pay for exercising his claimed powers—what shall we say of him?

WHEAT CROP OF THE WORLD.

The official estimates of the wheat crops of the world for the last five years are as follows: 2,954,763,000 bushels in 1901; 3,125,227,000 in 1902; 3,221,551,000 in 1903; 3,163,845,000 in 1904; 3,337,748,000 in 1905.

The production by the several grand divisions in 1905 was as follows:

	Bushels.
Total for the world.....	3,337,748,000
North America.....	808,674,000
South America.....	175,120,000
Europe.....	1,790,693,000
Asia.....	456,135,000
Africa.....	41,500,000
Australasia.....	65,626,000

It will be seen that Europe continues to produce more than half of the wheat crop of the world and that her crop is more than double that of North America.

The 1905 crop of North America came from the several divisions as follows:

	Bushels.
Total for North America.....	808,674,000
United States.....	692,979,000
Ontario.....	22,195,000
Manitoba.....	57,500,000
Rest of Canada.....	30,000,000
Mexico.....	6,000,000

The total for Canada is only 109,695,000 bushels.

The largest producer in Europe is Russia with 568,532,000 bushels; France is second with 338,785,000 bushels. Of South America's total of 175,120,000 bushels, Argentina produced 154,420,000.

In a horrible railroad accident in Colorado, a few days ago, about thirty persons lost their lives and a large number were injured. The collision resulted from the failure of a station man to deliver modified orders to a passing train. It is reported that the station

man had been for seventy-two hours on duty and slept as the train passed. Very many collisions result from similar long-continued work of train men. There should be most stringent legal restrictions preventing any such overworking of persons upon whose ability and alertness of mind the safety of users of public conveyances depends.

A VOICE FROM THE PACIFIC.

"Hawaii" is the title of a pamphlet issued by the Hawaii Promotion Committee, Honolulu. It contains plain and evidently conservative statements on the agriculture and agricultural possibilities of the most interesting group of islands of the Pacific. The subjects treated are sugar, pineapples, sisal, bananas, coffee, tobacco, vanilla, dairying, poultry, silk, vegetables, fruits, bees, stock-raising, and rubber. Though lying within the tropics, the islands have, in the main, sub-tropical climates. The term "climates" is proper, for the lands lie at various elevations from sea level to mountain heights with corresponding variations in temperature. The wind blows from the northeast during about 260 days of each 365. This brings much rain on the windward sides of the mountain ranges with which the islands abound, in many cases, and leaves a deficiency on the leeward sides.

Farming in these islands is so different from farming in the grain- and meat-producing sections of the United States, that those who contemplate a change to Uncle Sam's sea-girt possessions in the middle of the Pacific should write to H. C. Wood, secretary, Hawaii Promotion Committee, Honolulu, Hawaii, for full information.

BOYS' CORN CONTEST IN FRANKLIN COUNTY.

As was to be expected the corn-growing contest for boys has received proper attention in Franklin County, Kansas. The Farmers' Institute organization has taken charge. This means that the contest will be a great success. Following is a copy of the Franklin County poster:

BOYS' CORN CONTEST.—About \$300 offered in prizes to the farmers' boys of Franklin County, between the ages of 12 and 18, by the Franklin County Farmers' Institute. Each boy who enters will receive free one quart of pure seed corn. The cash prizes and the number of special prizes insures nearly every boy a good prize; also the experience will be of great value. It's all free and for your good, boys, so send your name and address to the secretary at once and it will be published by the county papers with the others each week. The rules have been published and will be published again, but they are simple and can be easily carried out.

C. W. GREEN, President.

E. P. PENDLETON, Sec'y.

Franklin County Farmers' Institute.

The KANSAS FARMER would like the names and addresses of all boys entered in the contest.

THE KANSAS AGRICULTURAL COLLEGE AT WASHINGTON.

On the evening of March 2, at the Teacup Inn in Washington, D. C., there was held the fifth annual reunion of the Washington branch of the Kansas State Agricultural College Alumni Association. The evening was spent in the discussion of a literary program, games and light refreshments, and a very enjoyable time is reported.

The Kansas Agricultural College enjoys the distinction of having more of its former students and teachers in Government employ than any other institution in the Union, and these reunions are usually attended by more than half a hundred of those who call this great college their Alma Mater.

The following is a list of those who were present: Mr. and Mrs. L. W. Call, Mr. and Mrs. M. A. Carleton, Mr. and Mrs. C. P. Hartley, Mr. and Mrs. C. F. Doane, Mr. and Mrs. W. L. Hall, Mr. and Mrs. L. A. Fitz, Mr. and Mrs. R. S. Kellogg, Mr. and Mrs. J. M. Westgate, Prof. and Mrs. A. S. Hitchcock, Prof. and Mrs. D. E. Lantz, Miss Margaret Butterfield, Prof. G. H. Failyer, Prof. J. B. S. Norton, Prof. Thos. E. Will, Major J. F. Morrison, E. C. Butterfield, F. A. Oakley, Nicholas Schmitz, Harry Umberger, A. B. Gahan, Earl Wheeler, W. R. Ballard.

Upon reading Luther Burbank's article on "How Plants are Trained to Work for Man," printed in "The Youth's Companion" for March 22, one can not help thinking that only a Methuselah could reap the full rewards of his own plant-breeding. The article indicates that the author has already achieved the end aimed at in some of his experiments. On the other hand, many

of them involve so many crosses, such careful selection season after season, that the result of them can hardly be known within the span of three-score years and ten. This contribution to "The Youth's Companion" is said to be the first word that Luther Burbank has ever yet said about himself or his work in print, and it is likely, therefore, to be read with interest by every one interested in horticulture.

THE ADVERTISING.

Do you read the KANSAS FARMER advertisements carefully? They are worth reading. Good advertising matter is a valuable feature in any paper or magazine, and the writer would not take a paper that did not have such advertisements in it. Some of the brightest men in this country are paid high salaries to prepare advertisements and they put brains into their work. Much timely information and many practical suggestions are included in the advertisements, and they are worth reading. You can not afford to skip the advertisements especially such as appear in the KANSAS FARMER. They are clean; they are reliable; and they are interesting. This paper contains no whisky or other objectionable advertisements to go into your home each week in the year with their baleful influence upon your children. The KANSAS FARMER is a clean, wholesome visitor to your homes and brings you each week more of scientific and practical information of value to the farmer and his family, than any other paper. It is a Kansas paper, published by Kansas men, and for Kansas farmers.

SWEDISH BROWN BEANS.

EDITOR KANSAS FARMER:—I enclose you samples of a bean, known as Swedish Brown Bean among merchants. I have looked in vain in seed catalogues for a description that would tally with them. Can you tell me if seed merchants of this country handle the bean? I suppose they do, for the bean does well in some States. How are they designated? I bought a few out of the common stock of a grocery store and planted two years ago, and they did fairly well that year. I would like to try them again this year if I can find reliable seed. E. E. LINDEHOLM.

McPherson County.

The samples sent have been identified by Prof. Robt. E. Eastman, of the Kansas Experiment Station as the "Swedish Brown Bean." They have not been grown at the Station, and are not named in the seed catalogues. Undoubtedly they can be obtained through any of the enterprising seed-houses advertised in the KANSAS FARMER. Cut this notice out and send it with the order.

BLOCKS OF TWO.

The regular subscription price of the KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year and one new subscription for one year with one dollar to pay for both. In like manner two new subscribers will be entered, both for one year, for one dollar. Address, The Kansas Farmer Company, Topeka, Kans.

"The Horseman" promises to present in a midsummer number, a complete history of the development and progress of the trotting horse. This number will be profusely illustrated and will in every respect be in the highest style of the printer's art.

"Forest Belts of Western Kansas and Nebraska" is the title of a valuable bulletin by Royal S. Kellogg, forest assistant of the U. S. Forest Service. Mr. Kellogg is a Western Kansas product, a thorough investigator and a conscientious writer. It would be worth while for the Government to place a copy of this excellent bulletin in the hands of every farmer in the region considered.

Congressman Jones, of Washington, has introduced a bill which provides that the Secretary of Agriculture shall be authorized and directed to investigate systems of farm management and types of farming prevailing in different sections of the United States, the means used for maintaining soil fertility, the methods employed in the production, utilization, and marketing of crops, to conduct demonstrations in improved methods of farming, and to disseminate the information concerning the foregoing, and for this purpose the sum of one hundred and twenty thousand dol-

lars be appropriated, to be available during the fiscal year ending June 30, 1907.

A bill just passed the National House of Representatives providing for increasing appropriations to the several agricultural experiment stations. Under the Hatch bill which was passed in 1887 these experiment stations each receive \$15,000 annually. The present bill proposes to add \$5,000 a year to the \$15,000 and to increase the amount each year until the added appropriation shall be \$15,000, making the total \$30,000 for each station. Well used, such an amount will be a good investment.

The Government free-seed graft by which some Congressmen seem to hope to buy the favor of farmer constituents by sending to some of them, at Uncle Sam's expense, a few cents' worth of garden or flower seeds seems likely to come to an end. The House committee on agriculture has stricken out the appropriation for next year. It is almost past belief that our National law-makers should expect to influence farmers to support them for renomination and election by bribes of a few cents' worth of common seeds. It is even more surprising that they should have consciences so dull as to permit them to pay these petty bribes out of the National Treasury. The Grange and other representative organizations have resolved against the scheme under which, while the bribe sent to a single constituent is small, a large sum is drawn from the public treasury for other than public purposes. The day has arrived when graft, whether large or petty, is disreputable. It is to be hoped that no Kansas Congressman will be guilty of voting for this unwarranted appropriation to buy a few thousand small bribes to be used in his interest.

Voice of the People.

John H. Pugh, Carbondale, Ill.: "Enclosed find \$1 to pay my subscription for one year. On account of so many accounts to meet at this time, I dislike to spare the money, but I would be lost indeed without my paper, the KANSAS FARMER."

J. J. Hysell, of Geneseo, Kans., writes: "I find that by reading and following the instructions in the 'old reliable' KANSAS FARMER I am learning more about farming all the time."

Mr. J. Riblett, Jr., writes: "Please find enclosed check for \$3 to pay on my back subscription to the KANSAS FARMER. I am running a hardware store now but I still get time to read the KANSAS FARMER."

Newton Bros., Whiting, Kans., write: "The KANSAS FARMER is a puller. We have received more inquiries from our card in the KANSAS FARMER than any medium we ever used. We have no Duroc-Jersey bred sows or gilts left and have only 3 or 4 August and September pigs left. Will price them right."

Agriculture

The Improvement of Cereal Crops.
PROF. C. A. ZAVITZ, AGRICULTURAL COLLEGE,
GUELPH, CANADA.

The subject of the improvement of our cereal crops is presented under four headings, each of which I consider essential in order to do the best work in the breeding of cereals, namely, the scission of varieties, the selection of seeds, the selection of plants, and the production of hybrids.

SELECTION OF VARIETIES.

I am convinced that the proper selection of varieties of cereals is of great importance, not only from the farmers' standpoint, but also as the basis of work for the improvement of cereals by plant-breeding. After growing and examining over two thousand varieties of farm crops in each of five years, and afterwards observing the behavior of some of those varieties in general cultivation, I wish to emphasize strongly the importance of variety in this work. As some breeds of live stock have been bred for many years to fulfil certain purposes, so have certain varieties of farm crops been raised for long periods of time with different objects in view. Some varieties are well adapted to rich, loamy soils, others to heavy clay land, and still others to soil of a light character. For instance, in Ontario, it would be unwise to grow the Joanette oats on a light, weak soil, or the Black Tartarian oats on a rich bottom-land. It would be equally unwise to grow the White Wonder peas on a poor soil or the Prussian Blue variety on land which naturally produces a large amount of straw. The best results could not be expected from growing the Turkey Red wheat where the crop is apt to lodge, or the Black Hullless barley on rich alluvial soil. Decidedly better results can be obtained from growing the Longfellow corn in Northern Ontario and the Leaming variety in Southern Ontario than if this order was reversed. Many greater yields can nearly always be expected from the Siberian than from the Black Tartarian oats; from the Dawson's Golden Chaff than from the Surprise winter wheat; from the Mandcheurl than from the Common Six-rowed barley; from the early Britain than from the Golden Vine peas; from the White Wonder than from the common, small, white, field-bean, etc. Certainly great differences exist between different varieties of grain crops in length of straw, strength of straw, susceptibility to rust, and quality of grain, as well as in yield per acre and in many other respects. In regard to the yield per acre, there is a very great difference in different varieties. For instance, we have grown a number of varieties of oats and barley under uniform conditions in each of sixteen years, and, for the sake of illustration, I wish to say that the results of these experiments show an average yield of grain per acre of 88 bushels from the Siberian and of 72 bushels from the Black Tartarian, a difference of 16 bushels per acre per annum in favor of one variety over another. Again, the case of barley, the Mandcheurl gave an average of 70 bushels and the Mansury an average of 59 bushels per acre during the same period of sixteen years. Here we have a difference of 11 bushels per acre per annum between two strains of the six-rowed barley. When we see such marked differences between varieties, we are led to the conclusion that variety has an important place in the work of plant-breeding as well as the practice of the farm. Mr. Hugo de Vries, of Holland, after visiting the noted Luther Burbank last year, wrote an account of his trip, and, among other things, he stated that "as a general rule, it holds true that the results of crossing depend primarily on the selection of the varieties used for that purpose. These indicate the list of possibilities from which the choice and the combinations have later to be made. Outside of this list, very little good is obtained, and then only by accident. This occurs very seldom in 'Burbank's cultures."

SELECTION OF SEEDS.

Within the past twelve years we have done a large amount of very careful work in order to determine the influence of different selections of seed upon the resulting crop. Fresh seed has been taken each year from the general crop of grain grown on the farm, or from seed of the leading varieties of roots and rape as obtained from some of the best seedsmen. The results, therefore, represent simply one

year's influence from seed-selection, but in order to obtain the influence from one year's work of this selection, the experiments have been repeated from season to season, in order to secure a good average of conditions of soil, temperature, and rainfall. For the large seed, none but well-developed grains were selected; for the medium-sized sample, the grains selected were of a uniform character, plump and of medium size; and for the small, none but sound, plump, and apparently good seeds of small size were used. In the selection of large, plump grain, one-half pound of each class was carefully weighed and counted. A corresponding number was then taken of the medium-sized and of the small, plump grains. The different selections were sown upon plots of similar size. Four tests were made annually with the different selections of seed of both the root and the rape crops. Duplicate experiments were conducted, in which the seeds of the different selections were planted separately, and a duplicate experiment was also conducted by dibbling the large, five medium and eight small seeds at each place where it was desirable for a root of a rape plant to grow. The plants were afterwards thinned, leaving one in each place and having the plants of the different selections of each class at an equal distance apart. The results of the duplicates of each method were then averaged and afterwards those of the two methods were averaged together. It will therefore be seen that the results of all the selections with roots and rape are those of four distinct tests made in each of the years in which the experiment was conducted.

	Number Yield of crop per acre		
	of years	Large	Medium
tests	seed bu.	seed bu.	seed bu.
Grains:			
Oats.	7	62.0	54.1
Barley.	6	53.8	50.4
Spring wheat.	8	21.7	18.0
Winter wheat.	6	46.9	40.4
Field peas.	6	28.1	23.0
	Tons	Tons	Tons
Field Roots:			
Mangels.	5	33.2	29.6
Sugar beets.	5	22.9	21.9
Swede turnips.	5	17.1	15.2
Fall turnips.	4	25.4	21.7
Field carrots.	5	24.5	22.2
Rape:			
Rape.	5	17.4	15.0
			12.4

From the figures here presented in tabulated form, it is most interesting to observe the marked influence of one year's selection of seed on each of the eleven different crops here enumerated. The large, well-formed seeds produced stronger and more vigorous and more productive plants.

In other experiments along similar lines, we have obtained better results from plump as compared with shrunk seed; from sound seed as compared with that which was injured in the process of threshing; from grain which was perfect in comparison with that which had sprouted in the field; and from seed which was thoroughly ripened in comparison with that which was harvested while it was still immature.

An interesting experiment has been conducted for thirteen years in succession, in a systematic selection of seed oats. The selections were made with large, plump, black seeds and also with light-weighting and light-colored seeds. The test was commenced in the spring of 1893, by selecting seed from the general crop of the Joanette black oats of the previous year. The selection made in each of the following years was from the product of the selected seed of the previous year. The selections each year were composed of an equal number of grains and were sown on plots of uniform size. As the selection for this experiment has been continuous, selecting the seed each year from the crop produced in the year previous, the average results are of but little value, but the yearly results are interesting, valuable, and quite suggestive. In the crop produced in 1905, it was found that the large, plump seed produced 65.5 bushels and the light seed 44.7 bushels per acre. In each of the past few years, the results have been much the same as those for 1905. In weight per measured bushel, the crop produced from the large,

required only 1149 grains to weigh an ounce, while the crop produced from the light seed required 2066 grains to make the same weight. It will be seen from the results here presented, that the selection of the seeds themselves has a considerable influence on the production of the crop and should form a factor in the process of breeding.

SELECTION OF PLANTS.

In the spring of 1903 some very choice grain of six varieties of oats, barley, and spring wheat was selected from the crops grown at the Ontario Agricultural College in 1902. Of each of these six varieties, one-sixteenth of an acre was sown with a grain-drill in the ordinary way; one-sixteenth of an acre was sown with a grain-drill by using every second tube of the drill; one-sixteenth of an acre was planted by hand, placing the seeds eight inches apart both ways; and one-sixteenth of an acre was planted by hand, placing the seeds one foot apart each way. It will therefore be seen that one and one-half acres were devoted to this work in 1903. No less than 9,972 seeds of each variety, or a total of 59,832 seeds of the six varieties, were planted by hand. The four methods of planting were used in order that a comparison might be made as to the best method to use in plant selection. It was found that the grain which was sown with the grain drill, either from every tube or from every second tube, gave a very poor opportunity for plant selection. From grain sown with a drill, heads may be selected, but it is practically impossible to make a satisfactory selection of plants, owing largely to the uneven distribution of the seed. When plants were grown at unequal distances apart, they varied greatly, owing to the relative amount of soil, moisture, and air, furnished the individual plants by the uneven way in which the seeds were distributed in the soil. On a careful examination of the plants obtained from the drilled seeds, it was found that some of them would be separated from all other plants by ten or twelve inches; while in other cases two or three plants would be growing so closely together that their roots and stems would become so much entangled that it was difficult to ascertain whether there was simply one plant, or whether there were two or three or four plants, until a considerable amount of time and labor had been expended in making the examination. It was therefore decided to make a few selections of heads, but not to make a selection of plants from the crop produced from the seed sown with a machine. The grains which were sown by hand, however, gave an excellent opportunity for the plants to grow under uniform conditions. As all plants in each of the two methods of hand-planting were at equal distances apart, it afforded an excellent opportunity for studying the stooling properties, the comparative strength of straw, and the size and uniformity of the heads, etc., of the individual plants. When the crops of each variety on the hand-planted plots had reached the proper stage of maturity, careful examinations were made and the results recorded for reference. After this was done, a few of the very best plants were selected and harvested separately. All of the seed of the most promising plant of each variety was sown in the spring of 1904, and nearly all the grain produced in 1904 was sown in the spring of the present year. A number of the other choice plants of each variety were also selected and harvested separately, and afterwards the best seed was selected and sown in single rows in the spring of 1904. From those strains which gave the best satisfaction in 1904, a sufficient amount of seed was selected and sown on uniform plots in the spring of 1905, and the yield and the quality of the crops produced were carefully recorded. The results so far are encouraging. A statement of a few of the records are here given.

INCREASED STOOLING PROPERTIES.

The crops grown from the seeds, planted one foot apart each way, showed the following average number of heads per plant from the selected seed in 1903, and from the seeds produced from the selected plants in 1904, to be as follows:

	Average number of heads per plant.	
Six-rowed barley (Mandcheurl).	10.8	13.5
Two-rowed barley (Chevalier).	26.3	31.7
White oats (Siberian).	13.6	18.4
Black oats (Joanette).	27.6	46.9

plump seed weighed 35.5 pounds and that from the light seed 24.3 pounds. It is interesting to notice that the crop produced from the large, plump seed

As the seeds were planted exactly the same distance apart in each of those two years, it is quite probable that the influence of the selection made

FENCE STRONGEST MADE. Built strong, tight. Sold to the Farmer & Whole-saler. Price, Fully warranted. Catalogue free. COILED SPRING FENCE CO., Winchester, Indiana.

LAWN FENCE Made of Steel. Lasts a lifetime. We have no fence. Said to never Wholesale Prices. 7 cts. a foot up. Cheaper than wood. Catalogue free. KITSELMAN BROTHERS, Box 399, Muncie, Indiana.

PAGE QUALITY Begins in our factory. There's where the first tests are made. Quality of wire first, then a practical weave. You get both in Page Fence. Let us tell you how Page-Wire is made, and how it differs from common fence wire. PAGE WOVEN WIRE FENCE CO., Box 7868, Adrian, Mich.

IWAN'S POST HOLE AND WELL AUGER Best earth auger in the world. For Fence and Telephone Post Holes, Wells, etc. Three times the work accomplished with an Iwan Auger than with any other. Makes hole smoothly and quickly; empties easily; is very durable. Used by U.S. Govt. \$14.50, 6, 7, 8, 9 and 10 inch, \$2.50 each; 12 inch, \$6.00; 14 inch, \$7.50. Sample at special price to introduce. Agents wanted. Inquire of dealers or write direct for particulars. IWAN BROS., Dept. Nol, Streator, Ill.

Send direct to our factory for catalog, make your selection (many styles) and we will ship it, freight prepaid, for you to try 30 days. If it doesn't stand the test, if quality isn't high and price low (about half local dealers'), if you are not satisfied, ship it back at our expense.

You Deal With the Factory

when you buy our vehicles. Not a mail order house or agent. And you can buy just as safely from us as from any local dealer. Be sure you send for catalog. We make it all plain there. **We pay the freight.** Address Dept. D. The Apex Mfg. Co., Bloomington, Ill.

Before you buy that Manure Spreader

see that it has sills and frame made of oak, a ball and socket joint on front axle to prevent racking and twisting, and steel braces and steel truss rods to guard against warping and sagging. See that the apron does not run backward and forward on hilly ground, but insist on a continuous positive apron drive.

See that it is practically automatic, and so simple that any boy who can drive a team can run it as well as any man, and control every operation without leaving the seat. The

Appleton Manure Spreader
has all these important features
and many others equally as important. Write to-day for free catalogue and special prices and terms.

APPLETON MANUFACTURING CO.
19 Fargo Street, Batavia, Ill., U.S.A.

In 1903 is largely the cause of the increase in the average number of heads per plant in the crop of 1904, as compared with that of the previous year.

IMPROVED STRAINS OF LEADING VARIETIES OF SPRING GRAINS.

Upwards of one hundred selected strains of leading varieties of winter wheat and spring grains were grown in the experimental plots on uniform plots in 1905. Fifty-six of the plots contained selected strains of spring crops described previously. Some of these strains are promising, as they indicate a greater yield of grain per acre than was obtained from seed produced from plants which had not been specially selected. The table which follows gives the highest yields per acre obtained in 1905 from seed resulting from the plants selected in 1903, as previously described. In comparison with these yields are those produced from selected seed from plants which were not specially selected.

without the introduction of fresh seed from other farms, soils, or localities. At the Ontario Agricultural College, eight varieties of oats and eight varieties of barley have been grown for sixteen years without change of seed. Care has been exercised each year to select the best grain for seed-purposes. The crops have been grown on soil which might be termed an average clay loam, and in no one year out of the sixteen were the crops produced on either a light sandy or a heavy clay soil. The land received no commercial fertilizers whatever, but was manured with about twelve tons of farmyard manure per acre each four years. It has been cropped heavily with grain, dairy train, was greater than the total probably changed but little in its productive capacity. As accurate records have been kept regarding the comparative yields per acre of each variety in each of these years, we are thus in a position to present results for comparison. The following table gives the average yields per acre per annum

	Tons of straw per acre from selected		Bushels of grain per acre from selected	
	Seeds	Plants	Seeds	Plants
Six-rowed barley (Mandscheuri)	1.8	2.0	68.4	78.5
Two-rowed barley (Chevalier)	2.1	2.4	44.8	58.6
Hulless barley (Guy Mayle)	1.6	2.0	47.3	48.6
White oats (Siberian)	2.3	2.1	86.1	91.3
Black oats (Joanette)	2.1	1.9	79.3	89.0
Spring wheat (Wild Goose)	1.4	1.8	29.7	36.4

for each of the four periods of four years each; also the average yield per acre per annum for the whole period of sixteen years:

	Average yield per acre per annum for each of four periods of 4 years each				Av. annual yield per acre for 16 years 1890-1895
	1890-1893	1894-1897	1898-1901	1902-1905	
OATS.					
Joanette	84.8	88.7	84.9	102.4	90.2
Siberian	72.9	83.9	90.4	105.4	88.2
Waterloo	74.3	84.1	85.6	105.9	87.5
Oderbrucker	74.6	85.1	85.8	102.9	87.1
Probsteier	75.7	81.6	88.1	100.3	86.4
Bavarian	70.6	79.9	86.6	103.3	85.1
Egyptian	70.7	71.4	76.4	88.5	76.7
Black Tartarian	67.2	60.5	66.5	91.9	71.5
BARLEY.					
Mandscheuri	60.3	72.2	70.3	76.4	69.8
Oderbrucker	53.1	61.6	68.4	68.9	63.0
Common Six-rowed	50.5	56.7	68.4	68.9	61.1
French Chevalier	54.6	55.8	68.3	61.2	60.0
N. Z. Chevalier	49.6	56.7	68.2	64.7	59.8
Mansury	48.4	53.4	73.9	59.0	58.7
Black Hulless	38.8	39.1	47.5	50.1	43.9
Hungarlan	42.7	34.8	42.2	50.8	42.6

Yield of grain	Yield of crop 1904		Yield of crop 1905	
	Straw	Grain	Straw	Grain
Six-rowed barley (Mandscheuri)	2.3	148	2887	1929
Two-rowed barley (Chevalier)	2.4	112	3265	1119
Hulless barley (Guy Mayle)	2.9	184	2178	2109
White oats (Siberian)	1.6	171	3553	2102
Black oats (Joanette)	1.2	196	8748	3439
Spring wheat (Wild Goose)	1.0	46	542	241

From these results, it will be seen that we obtained in 1905 fully 101 bushels of Joanette oats, 61 bushels of Siberian oats, 40 bushels of Mandscheuri barley, 35 bushels of Guy Mayle hulless barley, 27 bushels of Chevalier two-rowed barley, and 4 bushels of Wild Goose spring wheat, as the direct result in every case from one seed planted two years ago last spring. When we realize the fact that one single grain of the Joanette oats planted in the spring of 1903 produced over 100 bushels of grain in 1905, on about two acres of land, we learn something of the importance of securing even single grains of the highest possible value. In comparison with 100 bushels of Joanette oats, we have only about 4 bushels of the Wild Goose spring wheat under just as favorable conditions. The Wild Goose spring wheat has only a few heads per plant and a comparatively small number of grains per head. The crops which are here reported were greatly admired by thousands of farmers who visited the college and examined the experimental plots in the month of June of the present year.

OATS AND BARLEY GROWN ON THE SAME FARM FOR SIXTEEN YEARS WITHOUT CHANGE OF SEED.

The question of the advisability of making a frequent change of seed from one farm to another is one which has claimed the attention of farmers for long periods of time. It is a problem which is exceedingly difficult to solve; in fact, it is practically impossible to find a solution which will comply with all cases. Any information, however, which can throw light upon this perplexed question should be welcome. If it is necessary to change seed-grain every two or three years in order to keep up the vigor of the plants, the problem of seed-selection is an exceedingly difficult one. We find at the present day a considerable number of the very best farmers who think that good results may be obtained by growing the same varieties on the same farm for several years in succession

The results are very interesting and quite suggestive. Without one exception, the average yield per acre for the last four years is greater than for the first four years for each variety grown during the sixteen-year period. The average results of all the varieties for each of the one-, two-, three-, and four-year periods are given in the same order as the varieties just mentioned. Oats, 74 bushels, 79 bushels, 83 bushels, and 100 bushels; barley, 50 bushels, 54 bushels, 63 bushels, and 63 bushels. It will therefore be seen that the average yield per annum for the last four years surpassed that of the first four years by 26 bushels per acre for the oats and 13 bushels per acre for the barley. The figures here presented show quite clearly that it is possible to grow the same varieties of grain on the same farm for a considerable number of years without change of seed, providing great care is exercised each year in the sowing of the seed and in the handling of the crop.

THE PRODUCTION OF HYBRIDS.

Even though we take great pains in selecting the best seed from the best plants of the best varieties of cereals, we find that the plants produced, although greatly improved in many respects, have weaknesses. We observe that some varieties are specially strong in certain characteristics, while other varieties are equally strong in other features. With the hope of originating new varieties possessing the good qualities and eliminating the weak features of some of the best kinds, efforts have been made to obtain the desired results through artificial cross-fertilization. With the aid of the investigations made by Mendel, de Vries, Correns, Bateson, and others, we are obtaining new light upon this problem which we hope to be able to apply to excellent advantage. In former years when crosses of cereals were made, it was thought necessary to continue growing the crosses for six, eight, or ten years before the varieties became fixed. It is hoped that, with the new

information obtained, more definite results may be secured in considerably less time. At our Agricultural College, we have crossed a few of our best varieties of spring wheat, winter wheat, oats, and barley. The work has been largely accomplished during the last four years. The results in 1905 are certainly very encouraging. We had, in all, about eight thousand hybrids in the past season. In all our crosses, we are working along definite lines with the hope of securing what we are after. As, for instance, we have crosses between the Siberian and the Joanette varieties of oats. Of about two hundred and fifty varieties of oats which we have had under experiment, the Joanette black has produced the greatest yield per acre, has been the greatest stoker, and has furnished grain which is the thinnest in the hull. This variety, however, is very short in the straw and unsuitable for general cultivation. The Siberian variety possesses straw of good quality and grain which is white in color, but the yield per acre is slightly less, the percentage of hull rather more, and the stoking properties not nearly as highly developed as in that of the Joanette. We now have hybrids which are long in the straw, possess good stoking properties, and furnish grain white in color and exceedingly thin in the hull. We hope that these properties may be retained, so that a variety may be secured which will be constant in its possession of the good characteristics obtained from these two prominent varieties of oats. We also have crosses and hope to unite
